Sir: Your powerful articles on the question of the conferring of the LL.D. degree by Harvard College on President McKinley served to arouse discussion in the Boston papers, and they will serve to set a standard long after this particular case has been forgotten. The Boston *Herald* took a postal-card ballot of Harvard graduates, about 80 per cent. of the 800 who replied favoring the conferring of this particular degree. But it deserves to be recorded that a large minority of those who voted yes did so not because they approved the principle of giving degrees to the President of the United States *ex officio*, but because they felt that, since the Harvard Corporation had gone so far in the case of Mr. McKinley, to withhold the degree now would be discourteous.

I have no doubt that, if the graduates at large had been informed of the methods by which the Corporation was entrapped, they would have voted very differently. Even now, conversation with Harvard graduates picked at random proves how few of them know the circumstances. As you merely alluded to them in your articles, it may be well, for historical record, to state the facts briefly. Senator Hoar, who is this year President of the Harvard Alumni Association, on his own responsibility asked President McKinley to attend the Harvard Commencement. Mr. McKinley seems to have been easily persuaded, probably imagining that Mr. Hoar was authorized to give the invitation. Then the Senator announced to the Harvard Corporation that the President was coming. Now, neither the Corporation nor the Board of Overseers had had the least intention of inviting Mr. McKinley, for it was generally recognized that his policy has caused so irreconcilable a division of opinion that Harvard College ought not to seem to take party sides by conferring a degree upon him. The Corporation, on receiving the news, was perplexed; finally, it reluctantly concluded that, for appearance' sake, it must offer Mr. McKinley the degree. Then it reported to the Overseers what had happened, with the intimation that it was in a fix. It is to be noted that Senator Hoar chose for his plot a time when President Eliot was out of the country; possibly the guileless Senator knew, from past experience, that in matters which concern Harvard College President Eliot does not allow Senators or other persons to usurp his authority.

If any argument were needed to urge the abolition of conferring *ex-officio* degrees on public men while in office, is it not enough to cite this case? If the degree shall be conferred on Mr. McKinley, where will be the honor or the compliment for him, since it is known that neither the Corporation nor the Overseers had any intention of giving it? No wonder that Senator Hoar and his supporters in the press cried out against the propriety of discussing the subject in public. Until the matter reached the Overseers, he had successfully concealed his work, for the Corporation very naturally did not care to proclaim just how he had cornered it; but the Overseers are a large and leaky body, and they quite as naturally did not care to shoulder the responsibility of having been tricked by their colleague.

A. B. and A. M.

May 5, 1901.

SAUCE FOR THE GOOSE, BUT NOT FOR THE GANDER.

To the Editor of The Nation:

Sir: Others besides Southern cane-sugar and Western beet-sugar men will object to the repeal of the duty on Cuban sugar. The San Francisco *Call*, Mr. Spreckels's paper, in a leading article on the 25th inst., asks: "Why should those influences which demand free importation of sugar for a foreign country already under the greatest of obligations to the United States, be so persistently opposed to doing justice to our countrymen of the Philippines?" The writer adds immediately: "We do not know why. We give it up," but it is impossible to believe that he is so blissfully ignorant of reasons which are obvious to every intelligent person who has given any attention to the subject. Rather must one admire such professions of inability to fathom the apparent contradictions of "expansion" politics as humble reverences to the powers that be, the *morituri vos salutamus* of unswerving supporters of the Administration.

Yours most respectfully, C. J. G.

Oakland, Cal., April 30, 1901.

GIBBON'S LIBRARY.

To the Editor of The Nation:

Sir: After the death of Gibbon, William Beckford bought his library. In 1815 or 1816 Beckford gave the books to his physician at Lausanne, Dr. Frédéric Schöll. Gen. Meredith Read states ('Historic Studies in Vaud, Berne, and Savoy,' vol. ii., p. 505) that in September, 1879, Dr. Schöll's daughter told him that five hundred of these books were sold to the librarian of an American university. Students of what Sheridan called the luminous (subsequently saying he meant *vo*luminous) pages of Gibbon would be glad to know the present whereabouts of these books. Possibly some reader of the *Nation* can give the desired information. D. M.

Chicago, May 8, 1901.

Notes.

Doubleday, Page & Co. are about to bring out 'The Niagara Book,' illustrated, as a guide in connection with the Pan-American Exposition; 'Nature Biographies,' by Prof. Clarence Moores Weed; and 'Camera Shots at Big Game,' by A. G. Wallihan. The same firm will found in the autumn a new monthly magazine, *American Country Life*, under the expert editorship of Prof. L. H. Bailey of Cornell University.

A new volume of poems, 'Weeds by the Wall,' by Madison Cawein, is to be published in a limited edition by John P. Morton & Co., Louisville, Ky., on June 1.

More announcements from Macmillan Company are 'Aristotle's Psychology,' translated and edited by Prof. William A. Hammond of Cornell; 'Is, Hic, Iste, Ipse,' a study of these Latin demonstrative pronouns in their changes to the time of Isidore, by Prof. Clarence Linton Meader; and 'A Search for an Infidel,' by the Rev. Jenkin Lloyd Jones.

'Unconscious Comedians,' short stories by Caroline Duer, will be published in the fall by Dodd, Mead & Co.

A. S. Barnes & Co. have nearly ready 'Home Thoughts,' selections from the papers of that name contributed to the Saturday supplement of the *Evening Post*.

By June 1st, Mr. H. P. Biggar's 'Early Trading Companies of New France: A Contribution to the History of Commerce and

Discovery in North America' will be off the press. This is a work of original research both in France and in Spain, and more than a third of the volume will consist of an appendix of sources. The edition for sale will not exceed 550 copies, and orders should be addressed either to the Librarian, University of Toronto, Canada; to the Boston Book Company, Freeman Place Chapel; or to P. S. King & Son, Nos. 2 and 4 Great Smith Street, Westminster, London.

Beginning in April, Archibald Constable & Co., London, will issue each month in eight parts 'The Stall-Plates of the Knights of the Order of the Garter, 1348-1485,' a series of ninety full-sized colored facsimiles, with descriptive notes and historical introductions by W. H. St. John Hope, M.A. The subjects are "the splendid enamelled and painted gilt-metal plates affixed to the backs of the stalls in the quire of St. George's Chapel, Windsor," and constituting "one of the most remarkable displays of mediæval armory to be found in Europe."

A new and materially enlarged edition of the German "Verbatim Edition" of the copyright laws and treaties of all countries, revised by the Secretary of the International Bureau for Intellectual Property, Prof. Ernst Röthlisberger, will shortly be issued by the publishing firm of G. Hedeler at Leipzig.

A critical edition of Zwingli's works has been really a desideratum, the Zurich reformer having been comparatively neglected. The entire works of Melanchthon and Calvin are found in the *Corpus Reformatorum*, while Luther's voluminous writings are once more appearing in the famous "Kaiser" edition at Weimar in splendid shape. Now Zwingli is to receive the attention he deserves, his editors being Professors Egli of Zurich and G. Finster of Basel. The publishers will be Schwetschke & Sons of Berlin, who expect to issue the edition in 120 parts—in large orders, at 2.40 marks per part. Unfortunately, the publishers can promise only three to four parts yearly for the present, so that it looks as though it would take longer to finish this undertaking than even the Kaiser edition of Luther, which, begun in 1883, is still scarcely half completed.

Dr. John R. Clark Hall, author of 'A Concise Anglo-Saxon Dictionary,' presents a useful prose version of 'Beowulf, and the Fight at Finnsburg' (London: Sonnenschein; New York: The Macmillan Co.). The actual translation is not remarkable. Dr. Hall has done his work faithfully and intelligently, but his prose fails in speed, and his diction is too much made up of rather commonplace Latinity adequately to suggest the native vigor and poetic strangeness of the original. Herein it is hard to see where he has improved upon the work of Earle or Garnett. The special merit of the book lies in its make-up and in the well-considered introduction and appendices. The insertion of a compendious, italicized analysis in the body of the text will facilitate the work of the student. The indices of names and of things are carefully worked out. The latter, indeed, taken by itself, constitutes an excellent account of the antiquities of the poem. The division of the introduction under the headings "Matters of Fact" and "Matters of Conjecture" is commendable, and the discussion of the dangerous ground in the latter is eminently safe. One may differ from Dr. Hall's theory that the poem was written between 660 and 700 A. D., by one man, "an Anglian, most probably a Mercian," "a heathen by birth, who had been converted to Christianity, but had not attained to anything beyond a rudimentary knowledge of its doctrines." But all this is advanced without undue assurance, and the propositions throughout are tenable and consistent. Well-executed manuscript facsimiles, illustrations, and maps add appreciably to the value of the volume.

Mr. Frederic Harrison has issued through the Macmillan Co. his recently delivered Harvard lecture upon "The Writings of King Alfred." The pamphlet is distinctly an address with the rhetorical virtues proper in that kind. But while it adds little to the sum of current knowledge and critical opinion concerning the Saxon monarch, it is of much value as a discriminating, if enthusiastic, appreciation. Mr. Harrison leaves it to others to discourse of Alfred the codifier of laws, the educational reformer, the builder of a navy; and concerns himself with him as the first master of English prose style. Directing his attention to the translation of Boethius, with its copious additions and emendations, he makes out a very good case for the originality and force of Alfred's literary genius. He is scarcely just, perhaps, to the merits of the original Latin of the 'De Consolatione'; but this is easily forgiven in one who holds a brief for the *pater patriæ*.

The imprint of the same firm is upon Prof. George R. Carpenter's 'Notes for Teachers of English Composition.' Although primarily intended for such as use the author's 'Rhetoric,' the tract is not devoid of interest for any person who cares to know the aim and methods of the best contemporary teaching of the art of composition. The essay is sensible throughout; and its insistence upon the connection between correct expression and reasonable, informed thinking is timely. Whoever has adventured the wearisome way of theme-correcting, will be grateful for this advice *ex cathedra:* "When reading essays, make yourself as comfortable as possible, and take measures to guard against interruption."

'Australasia the Commonwealth and New Zealand' (Macmillan) in its main theme maintains the character for excellence of the "Temple Primers." Not always is interest so well sustained in severe compression of a subject. Apart from the cruel treatment of the aborigines, the history of the white colonization of Australasia has all the charm of a story. We never realized this more than in the perusal of this little book, while remembering from personal experience what Australia (then little over fifty years colonized) was in the fifties. Upon the whole, Mr. Jose writes of the native races in a sympathetic spirit. He does not, however, do justice to the Hau-Hau movement in New Zealand. There were elements of nobility connected with it. The manual is marred by the too frequent recurrence of the British "we," "we." Britain did not "undertake" the "task," or "choose" with an ulterior noble object. She chose Australia and Van Dieman's Land as convict settlements because it suited her convenience. They have been made into a commonwealth and New Zealand into a nation by those who there sought their advantage. The comparison, at page 105, of the Boer commandos with the bushrangers, and of "the British troops now struggling in South Africa" with the Australian mounted police, is as ungenerous as it is uncalled for.

'The Boys' Club' (London: D. Nutt), by B. Paul Neuman, can be strongly commended to the attention of all who are interested in the welfare of the boys of the working class in our cities. It is full of practical suggestions in regard to formation, membership, government, and the provisions for education and recreation, with frequent references to the experiences of successful London clubs. The author bases his work on the conviction that almost nothing is done for the great number of boys who, after leaving school, must become wage-earners, to whom night schools have no attraction, and from whom a large part of the criminal class is drawn. Accordingly, he advocates taking the boys a short time before leaving school, or soon after, while yet amenable to discipline; would have the government from above, and education and amusement the main features. There should be no attempt to make the club self-supporting, as in this case it will give merely a bare refuge from the streets. The endeavor must be made to secure a "religious atmosphere." There are supplementary chapters by experts on gymnastics, cricket, rowing, and swimming.

Under the very gentle designation of 'Speech-Hesitation,' Mrs. Ellery Thorpe sends out (E. S. Werner Publishing Co.) a little volume devoted to the infelicities and the relief of stammerers. Such defectives range from those whose syllables trip over one another or at times fail to issue, to those whose nervous force is so imperfectly or irregularly distributed as to put them in the class of complete incapables, and they appeal for help. Evidently the author has treated many of these, and she has evolved an hypothesis as to the condition which she terms "throat-contraction," with the qualification that "nervousness always exists in this form of physical derangement," and by an ingenious inversion explains that when the "contraction" disappears, the nervousness goes with it. It would not be profitable to follow the vagaries that riot through these rambling pages. The author evidently deeply sympathizes with the affliction, and has devoted much energy with apparent success to its relief. It has been estimated that the hesitants in speech are nearly threefold the total of the blind, the mute, and the insane. This we cannot verify, but the specific assertion that there are 500 in the public schools of Boston, or seven in the thousand, who speak with difficulty, doubtless may be proved or disproved. To recognize these chorea-victims as a special class and give them competent instructors equally with the dull of hearing and poor of sight, while taking special pains out of school to prevent the mental suffering and the absolute retrogression that sometimes follow, would be utilitarian as well as humane.

Dr. George S. Keith has added to his earlier little volumes half a dozen unconventional essays 'On Sanitary and Other Matters' (London: A. & C. Black; New York: Macmillan), about affairs of daily life. "The Waste of Water" refers entirely to conditions at Edinburgh, and incidentally reveals that there the noxious pan-closet, for which he would substitute the earth system, is in common use, and that the sewer ventilation, except as into the houses, is imperfect. The suggestion that a damp towel adequately replaces the morning dip indi-

cates a willingness to overturn that part of the British Constitution which rests upon the tub, and will be reprobated accordingly by those to whom immersion is an article of secular faith. In Dr. Keith's experience, scarlet fever is a mild disease with healthy children, and in such a family he encourages its spread (in a sanitary residence). There is none more treacherous, and this teaching is liable to sacrifice life. He is heretical also about the trained nurse, "whose services may be invaluable—when you can get her." Dr. Keith's essential doctrine, here as in his 'Fads,' is that too much flesh ("butcher's meat," with old-fashioned insistence, he defines it) is eaten by young and old. It deranges the morals of youth and the digestion of age, he maintains. Nevertheless, it is a satisfaction to read an independent thinker, if one uses his own judgment in adopting the teachings.

After an investigation, Lieut.-Col. A. M. Miller, Corps of Engineers, in charge of the Washington aqueduct, reported, March 28, 1900, in favor of purification of the Washington water supply by the mechanical or rapid method of filtration. Committees of the Medical Society of the District of Columbia, and of the Board of Trade, criticised this report, and urged the adoption of the slow sand-filter. The Senate Committee held a hearing in New York on the relative merits of the two systems, at which several experts were in attendance. Three of these, Messrs. Hering, Fuller and Hazen, reported in writing later on, recommending slow sand-filters. Sufficient reasons for this reversal of Col. Miller do not appear, either in their formal report, their statements at the hearing, or the several papers which are appended to the Government document, 'An Inquiry Held by Direction of the United States Senate Committee on the District of Columbia,' just issued. The arguments for and against both systems of purification are very fully stated, and it is clearly the opinion of all the experts save one that, with proper attention, either system is efficient in removing bacteria; that slow sand-filtration is most effective for clear water—rapid filtration, with a coagulant, for turbid waters; and that the Potomac water is on the border-line between these two classes, being at times turbid to a degree which would give mechanical filters the advantage.

The archæological part of the Quarterly Statement of the Palestine Exploration Fund consists mainly of notes by Prof. Clermont-Ganneau, a list of amphora handles with Greek stamps, and a report upon some rock-cut tombs near Jerusalem by Mr. Macalister. There are two ethnographic papers upon the Bedawîn by gentlemen long resident in Palestine. Mr. Baldensperger describes the life of the women, and gives an outline, with numerous extracts, of one of their favorite legends. The Rev. J. Zeller treats of the race in general, and endeavors to show to what is due their extraordinary preservation "amidst their incessant strife against misery and want, and amidst their bloodshed and wars, from sinking into the state of a savage and utterly barbarous people." Among the causes—as, their patriarchal form of government, and their pride in the purity of their race—he holds the principal to be "the gift of poetry, which elevates their character and preserves their better qualities even under the most adverse circumstances." They are "commonly unable to read or write, but the purity of their language is such that they easily make poems, which, if written down by others, are found to be grammatically correct." As a race, their character is marked by such striking contrasts as great instability and great tenacity, lasting love and lasting hatred, honesty and treachery, childlike simplicity and deep cunning. But with all their noble qualities they are a great hindrance to progress in the East, "for where the Bedawîn wander no tree grows and no corn can be raised, and their ravages are as fatal to agriculture as those of the locusts."

The principal articles in *Petermann's Mitteilungen*, number three, are upon the delta of the Trombetas, a little-known tributary of the Amazon, and on the 1896 earthquake in Iceland. Dr. H. Gravelius maintains that, of all forms of vegetation, forests have the greatest absorbent influence upon the surface moisture and ground water. Recent investigations, mainly in Russia, have proved that while in the subsoil of the open plain there were abundant springs, in the subsoil of the adjoining forest not a trace of ground water was to be found. This fact, however, does not affect the value of the forests on the hill slopes as a protection against the destructive agency of floods. From an article upon the characters employed in printing by the European peoples in 1900, it appears that these are eight in number and include Irish, Arabic, and Hebrew—the last not being represented on the accompanying map.

Prof. Gustav Retzius of Stockholm, in a new issue of his 'Biologische Untersuchungen,' publishes an interesting paper on the brain of Mme. Sonya Kovalevski, the eminent Russian mathematician, who was born in Moscow in January, 1850 (not December, 1853, as generally stated in biographical notices), and died in February, 1891, seven years after her appointment to an associate chair of mathematics at the University of Stockholm. Professor Retzius finds in the brain of this gifted woman no marked departure from the ordinary type of brain-structure, it being of the normal form found in women generally, although of rather small size and of limited complexity. Of a certain interest is the shortening of the Sylvian fissure, a feature which was also distinctive of the brain of the mathematician Gyldén. Professor Retzius, as a result of his researches, is not disposed to deny the interesting conclusion latterly reached by Professor Möbius that the "mathematical centrum" is situated in the lateral parts of the frontal lobes of the brains—a view with which the condition of the brains of Gyldén and Kovalevski in no way conflicts; but he considers our knowledge of the subject too limited to permit as yet of a definite conclusion being arrived at. Rather would he believe that this problematical centrum is situated in the parietal region of the brain.

The seventh section of Henry Carrington Bolton's 'Select Bibliography of Chemistry' appears as No. 1253 of the "Smithsonian Miscellaneous Collections." It is devoted exclusively to academic dissertations, especially those from the universities of France, Germany, Russia, and the United States, published independently of periodicals. This forms the third volume of the Bibliography, and completes the undertaking begun in 1888. The entire work contains more than 25,000 entries.

'The Anatomy and Histology of the Adult Female Mosquito' is the subject of a report to the Malaria Committee of the Royal Society of London by S. R. Christophers. The structure of this insect has lately become of considerable importance in following out the development of the parasites of bird and human malaria, and this report describes more fully than has heretofore been done the organs and tissues of *Culex* and *Anopheles*, two genera of the *Culicidæ*. The differences between them are slight, and are shown in a more robust exo-skeleton in Culex, and in the possession of tubular salivary glands, while those of Anopheles are sacculated.

Under the title, "Der Loewe von Babylon," the German Orientgesellschaft has published a splendid reproduction in colors of the famous lion clay relief found about a twelvemonth ago by Dr. Koldewey in the ruins of Babylon. The reproduction is one-half the size of the original—namely, 1.95 metres in length, and 90 centimetres in height. This relief is one of the many that made up the frieze along the famous Procession Street of the God Marduk. The dark-blue background with yellow stripes, together with six white rosettes, and the lion in white alabaster clay, form one of the most magnificent specimens of the polychromic art that Oriental antiquities have produced, and the best specimen of the brick enamelling arts of Babylonia extant. At the same time the relief serves to demonstrate the close connection between the work of the Babylonians and of the Persians in this line, as is shown by a comparison with the similar unique and splendid Persian lion found in the Louvre. It is evident, however, that the work of the Babylonians was superior to that of the Persians, as appears in detail from the extensive account which Prof. Fr. Delitzsch has issued in connection with this publication of the Society, of which he is the leading literary representative.

The name of the moving spirit and musical director in the approaching Bach festival at Bethlehem, Pa., was disfigured in our correspondent's letter last week on page 355 of the *Nation*. The organist of Lehigh University Chapel as well as of the Moravian Church is Prof. J. Fred Wolle.

—*Science* gives a particularly beautiful reproduction of the medal lately presented to Dr. S. M. Babcock of the University of Wisconsin by the Legislature of that State, in recognition of the great value of his inventions and discoveries and of "his unselfish dedication of these inventions to the public service." It is truly a remarkable event when the State bestows its official recognition and reward upon the man of science, and it is to be hoped that this is a precedent which will have a wide following. It would have been hard to find a more suitable occasion for introducing the custom, for Dr. Babcock's work is at once of great scientific interest and of great practical benefit; moreover, he has refused to take out a patent on his invention, and has given it freely and generously to the world. His discoveries in the field of agricultural science have been many, but it is his system of rapidly determining the amount of butter fat in milk that has revolutionized the dairy industry, and by its speedy extension into all the dairy countries of the world has contributed to the renown of American science. It is not his own State only that has honored him. "Although not an exhibitor, he was

awarded last year the Grand Prix d'honneur at the Paris Exposition, and recently the dairymen of New Zealand have sent him a beautiful testimonial in the shape of an elegantly bound hand-painted album of New Zealand scenery."

—The Museum Umlauff, in Hamburg, has recently acquired one of the most interesting specimens of natural history that it has been for many years the good fortune of any museum to obtain. It is a specimen of the male gorilla, which measured when killed 8.86 feet in height, and slightly more than nine feet in expanse of arms. This extraordinary creature, weighing about 500 lbs., was obtained in the forest of the station of Yaunde, in the German Cameroon region, the precious trophy of the hunter H. Paschen. The fatal shot brought the giant down from the crown of a cotton-tree in which it had taken refuge while pursued. To appreciate fully the dimensions—how they transcend those ordinarily assumed to measure the biggest of the apes—one has but to recall the size of the largest for which Du Chaillu pleaded in his 'Explorations and Adventures in Equatorial Africa,' and which for many years failed of recognition by scientists. In this in many ways remarkable work, which appeared just forty years ago, and achieved a reputation for fanciful description as well as for very accurate statement of facts, it is modestly stated that the largest specimen obtained by or for the author measured only five feet eight inches, although it is conjectured that a specimen then belonging to Prof. Jeffries Wyman, and we believe now in the possession of the Boston Society of Natural History, must have had a height of six feet two inches. The present specimen is, therefore, nearly one-half taller than the famous Wyman specimen, and dwarfs the Du Chaillu "monsters" almost into pigmies. It is in the presence of specimens of this kind that one realizes the curiosities that are still a part of the existing fauna of the globe, and the needlessness of looking entirely to past records for that which is or appears to be monstrous and abnormal.

—In 'Hero Patriots of the Nineteenth Century,' a neatly printed duodecimo of 329 pages (New York: T. Y. Crowell & Co.), Mr. Edgar Sanderson, whose 'History of the World' was noticed rather favorably in these columns two years ago, depicts the careers of some of the soldiers who fought successfully or unsuccessfully to free their country from a foreign yoke, or to preserve it from an invading foe. The biographies include Martin Diaz, the once famous but now little remembered guerrilla leader in the Peninsular war, a martyr to the cause of liberty under the execrable Ferdinand VII.; Andreas Hofer, whose exploits in the Tyrol in 1809-'10 showed that the Alps still bred the heroism that had immortalized Morgarten and Sempach; Abd-el-Kader, who all but baffled the arms of Louis-Philippe; Shamyl, who for a quarter of a century defied the Northern bear in the fastnesses of the Caucasus; Daniele Manin, under whom the republic of St. Mark flickered up for a brief term, fifty years after its extinction by Bonaparte; and that more fortunate breaker of fetters, Giuseppe Garibaldi. There is, in addition, a chapter devoted to the achievements of the heroes of the Greek Revolution. The volume, we presume, is primarily intended to be a book for boys (English boys just now need not go beyond the Transvaal for lessons in "patriotism"), but its contents and manner of treatment are such as also to invite more mature readers. The weak point about it is that the author has sought to make it too interesting. He has woven into some of his narratives, notably the lives of Diaz and Shamyl, an amount of romance which argues ill for his critical faculty. The cool way in which Mr. Sanderson serves up before the untutored reader the minutest details of hair-breadth escapes, the accounts of which could have been reported only from mouth to mouth, and handed down by tradition, is amusing. The style is very uneven, the English in some parts being sound and vigorous and in others slovenly (witness the remarkable account of the River Kuban on page 238). In treating of the heroic struggle for Greek independence, Mr. Sanderson seeks to impress upon the reader the fact that Turkish atrocities were not much more than on a par with the fiendish butcheries perpetrated by the Greek patriots. Taken with a goodly lump of salt in their most romantic portions, these sketches will help to fill out profitably a half hour now and then.

—In his 'Commercial Federation and Colonial Trade Policy' (Swan Sonnenschein & Co.), Mr. John Davidson writes from the colonial point of view, and with a thorough dislike of "that ugly phase of public opinion which we know as little-Englandism." As the dominant question in colonial policy is that of markets and consumers, commercial considerations must control the political, and lead to the adoption of some system by which the mother country and dependencies shall be mutually benefited. It is out of the question to revert to the mercantile system of the last century; and it is equally impossible to bring about free trade in the British Empire, as so many of the colonies obtain the larger part of their revenues from taxes upon imports, British and foreign alike. An alternative scheme, that Great Britain should impose a discriminating duty on foreign products while admitting colonial products free of duty, is not very admissible in the present condition of English opinion. As a last resort, the example of Canada is cited, where a tariff gives a decided reduction in duties on British manufactures, and it is on these lines that Mr. Davidson looks for future development of a commercial federation within the Empire. Canada made this concession freely; it is now England's turn to grant some differential treatment in favor of Canadian products and exports. This may best be accomplished by removing natural obstacles to trade with the colonies, and even by subsidies to freight steamers running to colonial ports—a proposition clearly contrary to free trade. What recommends Mr. Davidson's book is the frank recognition of the many obstacles in the way of such a commercial confederation. Preferential duties would for some time raise prices in the English market, and the colonial interest could not develop unless there was such a rise in price. Even so low a duty as 3 per cent. on foreign imports would amount to a tax of more than $50,000,000 a year on the consumer, and on the single item of wheat would tax each head of population two shillings, without considering the enhancing of the tax before it was finally paid. Upon a year's consumption of four items—wheat, meat, sugar, and butter—the consumer would be charged five shillings by the duties alone. In return for such a sacrifice by Great Britain it is doubtful if the colonies would derive any proportionate benefit. Their labor would be turned from manufactures, which their tariffs have so often unduly favored, into the attractive occupations favored by the preferential duties: the old timber duties on Canadian lumber are cases in point. Agriculture might flourish, but on an insecure basis, and only so long as the markets of the United Kingdom remained quasi-monopoly markets for colonial products. An imperial customs union is hardly to be thought of, because it would deprive the colonies of independent action, and renew the problems of central administration settled for all time by the revolt of the English colonies in America. To some of Mr. Davidson's political conclusions exception might be taken, but his little volume deserves a careful reading.

—In a privately printed pamphlet on the rise and fall of Smeerenburg, Spitsbergen, Sir Martin Conway relates the history of "Blubbertown," and incidentally clears away some of the legends which have gathered about this seventeenth-century settlement in the high north. This summer village began in the early years of the century through the erection of try-works on shore to render the oil from whales killed by the Dutch whaleships in the vicinity. At first it consisted of the copper try-works and tents for men working ashore, on Amsterdam Island in northwest Spitsbergen; in 1617 a few huts were erected, and in 1623 were replaced by new and substantial houses of stone and wood with tiled roofs, warehouses, etc. When the season ended, the tools, boats, etc., were stored, with any surplus of oil and baleen, and left until the following summer. The ships were anchored and moored, and the pursuit of whales carried on in shallops, while the rendering was done on shore, There were a church and a small fort with cannon, and about a score of try-works. In 1633-43 Smeerenburg was a busy and populous place during the brief summer, but its size has been greatly exaggerated in current legend. About 1,200 men were all that could be reasonably accommodated ashore, and the extreme estimate for the crews of the fleet would not exceed 4,000 to 5,000 more, a total of less than half the numbers often spoken of. With the rise of the industry to which the settlement was due, there was an interesting conflict of interests, political as well as economic, among the nationalities concerned with the fisheries. This lasted until the whales abandoned the shores and bays and had to be pursued in the open sea, and the practice sprang up of carrying the minced blubber back to Europe. About 1665 Smeerenburg was abandoned, and occasional visitors used the wood of the houses for fuel or burned them for pastime. To-day only the merest traces of the village can be distinguished, and the story of the settlement, happily preserved in this little monograph, has become almost legendary.

—The appearance in the early days of 1901 of the second half of Dr. Keutgen's 'Urkunden zur städtischen Verfassungsgeschichte' (Berlin: Felber) completes the task undertaken by the editor in 1899, and puts into our hands, now that the volume is completed, a substantial collection of 437 documents, occupying in all, with the very complete "Städteverzeichniss" and "Sachver-

zeichniss" at the end, rather over seven hundred pages. About a third of the documents seem to be in Latin, the remainder in Old German. They are arranged under the three heads of "The Origin of the Civic Constitution," "Town Ordinances," and the "Town System in the Period of Prosperity," with careful subdivisions according to subject and locality. The book is intended for seminary use, and the editor has scrupulously abstained from indicating his own opinions. We observe, indeed, that he assigns thirty-two pages to "Markt und Kaufleute" and only six pages to "Die Stadt als Burg"—his own favorite conception. The well-known passage about "agrarii milites" from Widukind is one of the few exceptions which he allows to the general rule not to admit "narrative sources." The collection will be extremely useful; our only fear is lest the very excellence of the "Sachverzeichniss" should encourage the discussion of rival theories of "origins." The best thing that students can do is to forget all the theories and read the documents through. The volume is the first in a series of "Ausgewählte Urkunden zur Deutschen Verfassungsgeschichte," to be edited by Prof. von Below with Dr. Keutgen's assistance; and the limitation to Germany harmonizes with Dr. Keutgen's notion of a specifically German development of civic institutions. When similarly complete collections are at our disposal for the municipal history of the other countries of western Europe, it will be possible to institute a comparison. Without such a comparison, German town history probably loses much of its significance.

LEA'S MORISCOS.

The Moriscos of Spain: Their Conversion and Expulsion. By Henry Charles Lea, LL.D. Philadelphia: Lea Brothers & Co. 1901. Pp. xii, 463.

All who appreciate genuine scholarship and have at heart America's part in the world of learning, must sincerely rejoice when news comes of another volume from Mr. Lea's pen. While his work at times appeals especially to the rather small circle of those interested in the jurisprudence of the Mediæval Church—to them it is absolutely indispensable—there are many chapters in the 'History of the Inquisition,' 'Superstition and Force,' and the 'History of Sacerdotal Celibacy' which ought to hold the attention of the more seriously minded general reader. It is a high tribute to the more intelligent of the Anti-Clerical party in France that they are using Mr. Lea's works as an efficient weapon in their opposition to the Roman Church. A complete translation, by M. Salomon Reinach, of the 'History of the Inquisition' is, our readers are aware, now appearing at Paris, for the moderate sum of three francs and a half a volume. It is to be feared that few in this country realize that Mr. Lea is the only American historian who, by reason of the extraordinary volume of his work, the inherent intricacy and obscurity of his chosen subject, and the fundamental character of his research, deserves to be ranked with the greatest historians of the century. Beside his astonishing achievements the popular treatises of Prescott and Motley sink, from the scholar's standpoint, into relative insignificance.

The present contribution to the history of Spanish woes is but the amplification of a chapter originally intended for the monumental history of the Spanish Inquisition which Mr. Lea has under way, and to which his well-known 'History of the Inquisition in the Middle Ages' forms in one sense the prologomenon. The subject of the Moriscos and their fate clearly merited a fuller treatment than it could receive in the larger treatise, and so the author turned aside to investigate and present this matter; for it "not only embodies a tragedy commanding the deepest sympathy, but it epitomizes nearly all the errors and tendencies which combined to cast down Spain, in a little more than a century, from its splendor under Charles V. to its humiliation under Carlos II."

This "splendor under Charles V." merits a moment's attention. It fell to the lot of the late Professor Baumgarten, after writing a work upon Spain during the Napoleonic period, to turn back in after years and prepare a history of Charles V. In the earlier book he gives the traditional picture of the wonderful prosperity, resources, and hope of Spain after the consolidation under Ferdinand and Isabella; he makes the usual reflections upon the incredible, cruel perversity which brought to naught Spain's legitimate dreams of permanent grandeur. The careful review of the condition of the Iberian kingdoms at the opening of the reign of Charles V. which he made later led him to an explicit revocation of his earlier notions. From the letters of Peter Martyr, the reports of Guicciardini, and other contemporaneous information, he reached a conclusion, comforting to the sincere believers in the continuity of history, that Spain never attained the degree of organization and prosperity usually assumed to have existed at the opening of the sixteenth century; hence its supposed decline can no longer be attributed mainly to the blind religious zeal of the immediate successors of Charles, but to congenital weakness, which a stimulant of American gold freely administered overcame for a time. While Mr. Lea is not apparently acquainted with Baumgarten's statements, he furnishes abundant evidence that the German was perfectly right in his unfavorable review of Spanish social and political resources. He emphasizes, too, the extraordinary development of religious and race intolerance in the fourteenth and fifteenth centuries.

Strangely enough, there was "little antagonism either of race or religion" during the centuries when the Christian princes were reconquering the regions occupied by the Saracens. The peaceable Moors were left in undisturbed enjoyment of their religion and laws. But the Church outside of Spain was horrified by the fraternal relations between Christian and infidel, and gradually awakened a spirit of intolerance. Yet while the Jews suffered terribly, the Moors were left in peace until, with the appearance of Ximines and the revived Inquisition, enforced conversion began to make their lives a burden.

"Yet to the last there were learned doctors who maintained that the coerced baptism of the Moriscos was a sacrilege and invalid, and so was the continued baptism of the children against the wishes of the parents; nor do the defenders of the work seem to realize the true import of the miracles which they triumphantly allege—that when the Moors of Aragon were forcibly converted, in 1526, an image of the Holy Sepulchre in the Carmelite Convent of Saragossa wept for twenty-four hours, and the images of Our Lady of Tobet and some associated angels sweated profusely for thirty-six hours, so that a vase of this precious liquor was collected and preserved, of which, in 1590, Philip II. devoutly begged a portion. When the Moriscos were expelled in 1610, this marvellous fluid suddenly evaporated, even that belonging to the King."

Charles V. insisted upon unity of faith throughout his Spanish kingdoms, and, in spite of pledges to the Moors and of serious resistance, a conversion by edict took place to which the Moriscos submitted, continuing, however, their old religious observances in a more or less public fashion. An attempt to keep these nominal converts out of the clutches of the Inquisition, on the ground that they could not be expected to change their habits all at once and avoid all the offences which the Inquisition was wont to regard as sure indications of heresy, proved unsuccessful, but it is comforting to find that the poor Saracens got at least some of the satisfaction from sanbenitos that the early Christians derived from the lions. It was reputed an honor to appear in the *auto de fé*, and we hear of a woman who, when given a sanbenito, requested another for her child, as the weather was cool. The executioner who scourged the Moors in an *auto de fé*, upon taking up a collection from the victims for favors conferred, was refused payment by one man on the ground that he had not been flogged. When it was discovered that he had been inadvertently omitted, he received his lashes with great satisfaction.

Mr. Lea has given a careful account of the interesting efforts to bring about a real conversion of the Moriscos through persuasion and decent treatment. One of the great obstacles to the amalgamation of the races was the refusal of the popes to make the tolerant concessions urged by the more intelligent Spanish governmental officials, both ecclesiastical and lay. The conduct of Philip II., while full of indecision, shows an appreciation of the real conditions of success, and at his death he was planning how the religious instruction of the Moors could be secured, and was urging Clement VIII. to reconsider his refusal to exempt the Moriscos from the rule requiring them to denounce their accomplices, which formed a barrier to voluntary conversion.

The friendly relations between the races of Spain had been disturbed and then destroyed by religious fanaticism, with the natural results.

"There came a change which led the Spaniard to treat the Morisco with the galling contempt which Bishop Guevara deprecated, and which inevitably was repaid with hatred. So little respect had been shown by the rulers to plighted faith, where the Moriscos were concerned, that this contempt not unnaturally led the people to regard them as entitled to no protection from the law, and as subject to arbitrary abuse and oppression."

When we consider that "the Moriscos were well-nigh supporting the whole kingdom with the products of their toil," and played the most important economic rôle, it is easy to see how fatal this national animosity must have been. No student of Spanish history since the opening of the sixteenth century can afford to neglect the data which Mr. Lea has patiently collected in regard to the economic and financial situation of the country.

Besides the religious and economic prob-

lems which the treatment of the Moors forced upon the incompetent and irresolute King Philip and his councillors, a new danger arose after the revolt of Granada, in 1568, in the proposed alliance between the Moriscos and the foreign enemies of Spain in Africa and France. This added a grave danger to the previous complications, and undoubtedly made expulsion appear a less outrageous measure than would otherwise have been the case. Spanish foreign missions in China and Japan suggested to a contemporary "a man who goes hunting lions and ostriches in Africa, leaving his house full of vipers and scorpions. If a hunter can tame and train a wild falcon, why cannot a wise and learned prelate, by the right methods, gain the heart of a Morisco?" But such moderate counsel could not prevail.

The most horrible suggestions were made for disposing of the obnoxious Moriscos, from a systematic castration of all the male infants to driving the whole people into vessels which were to be scuttled at sea, since it was unwise to add to the African population by permitting them to reach land. In 1509 expulsion was decreed, and carried out—at first, with more system and humanity than would have been expected from the Spanish Government; later with extreme disorder and barbarity. Estimates of the numbers of the Moorish inhabitants of Spain vary greatly. Mr. Lea thinks that 500,000, or less, is a fair guess. "When we compare the inconsiderable number of the exiles with the original large Moorish population of the lands recovered from the reconquest, we can realize how great a proportion of the Mudéjares must have become Christians and have been merged indistinguishably with the conquerors." The only class upon which the country could rely for a proper utilization of its resources, agricultural and industrial, was in this way brutally sacrificed when it might have been readily retained, "perhaps even at the last moment, by wise measures of conciliation and by permitting the expatriation of those who were irreconcilable."

BOOKS ON PAINTING.

La Peinture Romantique: Essai sur l'Évolution de la Peinture Française de 1815 à 1830. Par Léon Rosenthal. Paris: Société Française d'Éditions d'Art. L. Henry May. 1900. Pp. x, 336.

Piero della Francesca. By W. G. Waters, M.A. (Great Masters.) London: George Bell & Sons; New York: Macmillan. 1901.

The Painters of Florence from the Thirteenth to the Sixteenth Century. By Julia Cartwright (Mrs. Ady). London: John Murray; New York: E. P. Dutton & Co. 1901.

The Frescoes in the Sixtine Chapel. By Evelyn March Phillipps. London: John Murray; New York: E. P. Dutton & Co. 1901.

The printed page of M. Rosenthal's monograph is about 5¾ by 7½ inches, exclusive of margins, and in nearly 350 such pages there is plenty of room for what the author has given us, an exhaustive essay on nearly every phase of the Romantic revolution in French painting. A translation of the table of contents, with brief comment, will serve to show the thoroughness of M. Rosenthal's treatment of his theme.

After an introduction and a "Summary Bibliography," we have Book I., "Before the Battle," divided into seven chapters of about ten pages each. "The Hegemony of David" gives a clear account of the æsthetic principles of the Davidian school, of its unity, and of its powerful organization and almost universal sway. Nevertheless, the rule of David had its limits, of which the second chapter treats, and a great part of this chapter is necessarily devoted to that truly great and personal artist, Prudhon, who seems likely to loom larger in the painting of the end of the eighteenth century and the beginning of the nineteenth as time goes on. Then come two chapters on the forewarnings of the revolution: First, "L'Actualité," as shown in portraiture and in the painting of contemporary subjects, *e. g.*, the "Coronation of Napoleon," the "Plague at Jaffa," etc., by David himself and his most devoted adherents; second, the introduction of religious subjects and subjects from mediæval and modern history, notably by the school of Lyons. The fifth chapter deals with the "Æsthetic Causes of the Revolution," of which the most important was the effect produced by the artistic spoils which Bonaparte had accumulated in the Louvre; the sixth, with the influence of English art as brought to bear by the exhibition in Paris of works by Bonington, Constable, and Lawrence. Turner is dismissed with a few words as, however great his personal genius, without appreciable influence on French painting. The seventh chapter, which concludes the first book, shows how the school of David was not succeeded by another "school" of different principles but of similar homogeneity, but rather by a number of independent artists, and how "Individualism and Liberty" became the characteristics of modern art.

Book Second is historical and gives in two chapters a narrative of the fortunes of the fight, chapter first taking us to 1824, and chapter second from 1824 to 1830. The two chapters of Book Third deal respectively with two painters, of whom one has generally been considered the last of the Classicists, and the other the first of the Romanticists, but both of whom M. Rosenthal considers, justly in many ways, "The Precursors of Realism," Ingres and Géricault. Book Fourth is devoted to an analysis of the essential nature of Romanticism in painting, and to a study of the principal figures in the Romantic revolution. Its eight chapters are entitled: Romanticism; Romantic Subjects; Romantic Landscape; Bonington; Delacroix; Decamps and the Lesser Romanticists; The Pseudo-Romanticists; and the Waverers. Book Fifth consists of a "chapitre unique" dealing with "The Resistance," and notes the fact that the School of David was never really overthrown, but persists to this day, in greatly modified form, as the official representative of French art; while Book Sixth deals with such side issues as the influence, or lack of influence, on French Romantic painting of the other arts of design, of literature, and of the painting of the other countries of Europe. Finally, there are a "Conclusion"; two appendices, giving lists of the principal works of the various Salons of the Restoration, and of the principal works of that period now to be found in Paris; and an alphabetical index of artists mentioned in the text.

It is, of course, impossible to consider in the space of a book review a tithe of the subjects touched upon in so extensive a work. It would be interesting to dwell upon the treatment given to Ingres, but we shall confine ourselves almost entirely to Book IV., and to one or two points in that book. M. Rosenthal is especially concerned to combat the idea that the Romantic revolution was largely a literary rather than a purely artistic movement, and that it consisted as much in a change of subjects and of the manner of considering subjects as in a change of technical methods and the manner of considering painting. He quotes Fromentin's remarks about the dominance of the subject in French Romantic art, about the pictures "which all signify something, which all represent things or feelings, express passions or tell stories, . . . pictures in which the dramatic, pathetic, romantic, historical, or sentimental element contributes almost as much as the talent of the painters to the success of their works." But he quotes to disagree. He minimizes the direct influence of the Romantic writers on the Romantic painters, and of the painters on the writers, maintains that in reality they saw little of each other, and understood less, and that the two movements were parallel, not identical. For him, the subjects of the Romantic school were pretexts only, adopted because they gave a chance for splendid color and rich effects, and his definition of Romanticism in painting is that it was an attempt "to free painting from all preoccupations foreign to painting itself"—to revive the art of painting as such—to create art for art's sake.

This definition seems to us faulty in that it is at once too wide and too narrow. In order to justify it, he drops out of the count altogether the host of illustrators who, when they were not the painters themselves, lived with them and beside them; he classes Vernet and Delaroche and Scheffer and many more as pseudo-Romanticists, and, having thus reduced the Romantic school to Bonington, Delacroix, and Decamps, with two or three minor men, who were really bent on the revival of painting, he makes his school fit his definition. But, if the definition is narrow enough to exclude a number of painters who have always been classed with the school, it is wide enough to include all the greatest painters who have ever lived, many of whom not only belonged to other schools, but have never been thought to have had the Romantic temperament. If Romanticism in painting is simply painting for its own sake, then Titian was a Romantic painter, and Rubens, and even Chardin and Terburgh. The Romantic revolution of the Restoration was a complex movement, in which many currents mingled. A part of it was the mediævalism of contemporary literature, a part was a revived love of color and an attempt to recover the art of painting, a part was individualism, the revolt against authority, the desire of personal expression. The first was akin to all good painting; the third is the special mark of the Romantic temper in all times and countries.

M. Rosenthal's treatment of Delacroix is highly interesting, and gives some notion of the isolated and personal nature of his genius and of the kind of partial failure that has left him a great name, but a painter of unliked or almost disliked pictures. The conclusion, also, is admirable, which shows how, as the modern artist has become free,

he has also become separated from his public, so that in the nineteenth century was seen, for the first time in the world, a people that scorned its greatest artists, and great artists busy in producing what the people did not want and glorying in their own unpopularity. We have said enough to show that the book is one of real importance. We should like to think that there might be sufficient demand to insure its translation.

The latest volume in the "Great Masters" series is much like many of its companions. It is marked by the same over-enthusiasm of the specialist, by the same careful statement of fact and painstaking in the matter of attribution, that mark most volumes of the series. In the latter matter the treatment of one case is puzzling. Of the Poldo-Pezzoli "Portrait of a Lady" (attributed, tentatively, to Verrocchio by Berenson), the text says: "There is no extant evidence which connects its authorship with Piero; but if it is not from his hand, it must be the work of some gifted painter of the same school whose name has perished." This seems to incline towards Piero's authorship, but in the "Catalogue of Works" this picture bears the asterisk which marks those works "which the author cannot accept." When we find that this same picture has been made the frontispiece of the volume (an exquisite one it makes), and reproduced in photogravure as against the half-tone of the other plates, we are somewhat bewildered. One small statement we must criticise. Of the portrait of Federigo, Duke of Urbino, it is said: "The attitude of exact profile was doubtless chosen to conceal the loss of the right eye," etc. As five other portraits attributed to Piero are shown in this volume, all in exact profile, as were most portraits of that date, the reason seems superfluous.

Mrs. Ady's 'Painters of Florence' is a workmanlike little book which may be safely recommended to students and beginners who wish for a concise account of the Florentine painters from Giotto to Buonarroti, with what is definitely known of their lives and some appreciation of their especial achievement and their position in the history of Art. It is embellished with a photogravure frontispiece after Lionardo, and sixteen well-executed half-tones which, oddly enough, include nothing of Michelangelo's.

Evelyn March Phillips has compiled a guide-book to the Sistine Chapel which tourists should put in their trunks and, when they go to the Vatican, in their pockets. The subject of each of the frescoes is described, portraits are identified where possible, the present state of expert opinion as to attribution is made clear, there is a little harmless criticism, and the whole is accompanied by twenty-four illustrations of frescoes or parts of frescoes. The only thing we should be inclined to cavil at is the identification of one of the figures in Perugino's "Charge to Peter" with Judas. It is true that there seem to be twelve apostles here instead of the eleven in Raphael's cartoon, in which Mr. Stearns fancied he recognized a figure of Judas, but we cannot believe that any painter would have placed Judas among the other disciples after the Passion and the Resurrection, and certainly not that he would have allowed him still to wear the aureole as do both these figures. In Giotto's frescoes at Padua, Judas wears the halo up to the moment of the Betrayal, but in that scene it is absent.

THE BOER-BRITISH WAR.

The Second Boer War, 1899-1900. By John P. Wisser, Captain Seventh United States Artillery. Kansas City, Mo.: Hudson-Kimberly Publishing Co. 1901.

The Sick and Wounded in South Africa. By W. Burdett-Coutts, M.P. Cassell & Co. 1900.

Campaign Pictures from the Front. By A. G. Hales, Special Correspondent of the *Daily News*. Cassell & Co. 1900.

An American with Lord Roberts. By Julian Ralph. Frederick A. Stokes Co.

In the aftermath of recent books upon the war in South Africa, the most important of those coming under our notice is the military study by Capt. Wisser of the United States Artillery, in a small volume accompanied by a portfolio of twenty-three maps, and illustrated by pictures of bridges, "kopjes," traction engines for highways, and other local features of the campaigning. These illustrations, as well as the information which affords a trustworthy basis of his criticisms, Capt. Wisser has drawn mainly from French and German military periodicals. The method of treatment is first to give a simple and dispassionate account of a campaign, and to follow it immediately by comments upon its lessons to the professional soldier. But the writer's deductions will be of interest to other than active military men. He points out the blunders of the British commanders in the first periods of the fighting, in their employment of obsolete methods of attack, in failing to develop a proper system of reconnoissance, in preparing for assault of entrenched positions only by a desultory artillery fire instead of a vigorous bombardment, and in sending masses of troops with volley fire against an invisible, well-covered enemy instead of deploying a thin skirmish line. The Boers, however, were very weak whenever it came to the offensive, and so lost many an advantage gained in their skilful repulses of assaults. Capt. Wisser thinks the most impressive conclusion to be drawn from these campaigns is that, notwithstanding the immense improvements in arms of long range and precision, the old principle of strategy has not been weakened, namely, that the army which assumes the active offensive is most likely to win.

The letters written to the London *Times* from South Africa by Mr. Burdett-Coutts, in the spring of 1900, setting forth the hideous condition of the hospitals for the sick men of the British army, quite naturally stirred up much passionate discussion in Parliament and out. A partial reprint of some of these official disputations, with Mr. Burdett-Coutts's arguments of vindication, and a few of the letters, is now given in a pamphlet of some 350 pages. Abstracts of Parliamentary debates and of hearings by Commissions are seldom attractive in literary form, and the English mode of reporting such matters seems to add to their intrinsic dulness. But, from the cloud of words and Parliamentary flourishes, emerges pretty clearly the essential truth that, until public sentiment was aroused by these and other letters, the medical department of the war was utterly obtuse to the crying needs of an army suddenly improvised in a new country of unwholesome conditions. The idea that war is meant for the killing of men seems to have justified the home authorities, in their own minds, in leaving to Providence crowds of men alarmingly sick with typhoid and other enteric diseases; for the doctors were few, overworked, and ill-equipped with appliances for arresting the disease, and the dominant idea of nursing was to exclude women by all means, and to rely upon ignorant and untrained enlisted men, most of them convalescents—that is, barely recovered from sickness and therefore enfeebled in energy. The official retorts to the testimony of neglect and inhumanity were mainly those to which we of the United States were accustomed under like complaints in our Spanish war: first, a general denial; then, when the evidence was irresistible, an outcry against the disloyalty to party of the chief accuser, and the unpatriotic temper of criticism in time of war. But eventually, after much needless misery and death, the evils were largely remedied. A permanent value of such contributions to history is in their emphasizing the essentially brutalizing effect of warfare upon ordinarily reasonable and humane persons.

The representatives of the colonial contingents of the British army, in their ardent praise of the valor of their compatriots, resemble the reporters from the front of the exploits of the volunteers of a certain great American republic; and a fellow-feeling may therefore draw some of us to the narrative of an Australian member of the staff of the *Daily News*, who depicts with enthusiasm the deeds of his countrymen, presenting his tales after the fashion of a camp-fire story-teller, with a liberal infusion of slang, and with warm recognition of the virtues, which he finds to be many, of his Boer adversaries, into whose hands as a prisoner he once fell. Incidentally the writer throws light upon the causes of typhoid fever, to whose charge must be laid most of the soldier deaths, by hotly declaiming against the utter lack of sanitary sense in the management of many of the camps. But the Boers seem to have been rather more ignorant or reckless of camp decency.

Julian Ralph does not share the admiration for the Boers of his brother newspaper correspondent. On the contrary, he declares them to be treacherous and lying, and for the most part ill-kept in persons and homes, and finds a close resemblance in their lowness in the scale of civilization to the East Tennessee mountaineers. He even goes so far in their dispraise as to question their skill as marksmen, since he finds that their volleys were no more disastrous than those of the average lines of fire. This denial, however, hardly agrees with the writer's other testimony as to the peril of approaching the Boer entrenchments. Notwithstanding his paradoxes, Mr. Ralph deserves the gratitude of his readers in at least one respect, that he opens this collection of gleanings from his writings to magazines and newspapers with some clear definitions of the terms of local topography, such as kopje, veldt, spruit, nullah, and kraal, which most of the writers from South Africa have been content to roll as sweet morsels under their tongues, as additions to their impressive vocabulary, without condescending to translate them into England equivalents which would greatly enlighten their narratives.

The Opera, Past and Present. By W. F. Apthorp. Scribners.

In this, the third volume in Scribner's "Music Lover's Library," Mr. Apthorp has accomplished the remarkable feat of condensing the history of the opera into a book of 238 pages, every one of which is interesting. He has shown exceptional taste and judgment in eliminating unessential facts, while the important ones are presented in excellent perspective with the aid of a vivid literary style which sometimes verges on colloquialism. Nor is this all. He has managed to give his monograph a sort of plot interest. Operas are proverbially short-lived, and to study their individual history is a good deal like walking in a cemetery and reading gravestones. The first operas were written three hundred years ago, and many hundreds were written every hundred years (Riemann's 'Opern-Handbuch' is a volume of 750 pages); but it is not till we come to Gluck's "Orfeo," dated 1762, that we find an opera which has survived to this day. The first two chapters (53 pages) of Mr. Apthorp's book are, therefore, concerned with the dead operas of a century and a half. His treatment of the subject is, however, very much alive.

The plot interest referred to lies in his tracing the evolution of the opera, and showing that, although there has been an astounding progress, the extremes nevertheless meet. Poor Wagner was barbarously abused for his "absurd theories" and his "iconoclasm," while, as a matter of fact, his attitude was practically identical with that of the originators of Italian opera. "The opera began (in theory, at least) as a perfect exemplification of the art principles of the Wagnerian Music-Drama; all that was lacking was a further musical development." Long before there was any opera, there were what Mr. Apthorp felicitously calls "premonitory symptoms," such as the pastoral play attributed to Adam de la Halle, the early madrigal plays, and the French pantomimic ballets. Then came the Florentine reform—a foolish and futile attempt to revive classic Greek drama, which resulted, instead, in the birth of modern opera.

The trouble with this early opera was that it was little more than a theoretical skeleton; a union of poetry, scenery, action, and music, but without any musical charm, except some vocal embroideries. This naturally led to a reaction, and, from being an essentially dramatic and scenic form of art, the opera became a purely musical one. Thus there have been two opposing principles in the opera ever since its beginning, and Mr. Apthorp's book tells the story of this long warfare between them. Originally, in Peri, Monteverdi, Cavalli (as in Wagner), the opera is a drama with auxiliary music; the anti-dramatic school of Carissimi and Cesti made it a drama for the sake of music; and such it remained, in spite of Gluck, Weber, and some minor reformers, as late as Rossini and Donizetti, till the giant club of Richard Wagner destroyed it so effectively that it had to be given up by the Italians themselves, headed by Verdi, whose "Falstaff" is Wagnerian, in so far as it abandons all the old operatic set forms and makes the music adapt itself every moment, both in form and in spirit, to the text and the action. The young Italians followed him in this, and they also followed him in studying other foreign models. Mr. Apthorp suggests ingeniously and plausibly that the musical decadence of Italy was due to the stopping, for a long time, of all musical ideas at the frontier. Italy always exported, never imported, till she was exhausted. Verdi created a new epoch by assimilating the progress made in Germany and France, while his individuality and originality were great enough to save him from the charge of being an imitator.

The composers to whom our author devotes separate chapters are Gluck, Mozart, and Wagner. What Gluck did was "new enough to scare the critics, who, as academic policemen, guarded nothing more carefully than the inviolable sacredness of traditional forms." He was accused, like every "new light" in the whole history of opera, of lacking all power of song, and of setting things to music that were not appropriate to song. The author holds truly that Gluck's real strength as a reformer lay in his work, not in his doctrine. His theory is chiefly negative, pointing out what should be avoided in opera writing. Vocal ornamentation he does not oppose on principle, but only where it seems out of place, and he retains the old set forms. For Mozart, Mr. Apthorp has a great admiration, though he admits that he totally ignored the Gluck movement, founded no school, left no imitators, and "was decidedly an ordinary man intellectually. . . . Were he alive to-day, he would read nothing but a newspaper." Regarding "Figaro," the author seems to agree with Hans von Bülow that the comedy is better without Mozart's music. In "Don Giovanni," however, Mozart "suddenly discards his familiar methods, and instinctively takes—to be sure in his own way and style—to the Wagner method."

The pages devoted to Wagner show the same judicial temperament as the other chapters. The author thinks that the influence of other composers shows itself to some extent in Wagner, as late as "Rheingold" and "Die Walküre." Like other great men, Wagner "had a way of taking his own where he found it; but, with 'Siegfried,' he began to find it only in himself." The evolution of the leading motive is traced to a point where, as in the love duo in "Siegfried," the music is woven out of five distinct motives in the closing stretto in C. Though Wagner was ever hungering for sympathy, Mr. Apthorp believes that the opposition he met with during the better part of his life was a stimulant which his militant genius needed, and which benefited his work.

There are many other suggestive comments in this book that might be dwelt on—such as the explanation why Rossini did not write any operas during the last thirty-nine years of his life; the remarks on "sea-serpent operas" that led to the reaction in favor of the third-rate Mascagni; the degeneracy and the saving features of Bayreuth to-day; the French opera created by foreigners, etc. Bizet alone hardly gets as much attention as he deserves. His operatic work may be considered the most inspired after Wagner's, but our author dismisses him with a curt reference to "the matchless 'Carmen.'" But this is a slight matter. The book, as a whole, cannot be too highly commended to all lovers of the opera. The croakers who are always talking about the decline in the art of singing will find the chapter on "The Art of the Opera Singer" an eye-opener.

The Historical Novel, and Other Essays. By Brander Matthews. Charles Scribner's Sons.

Mr. Matthews's essay on the study of fiction opens with the remark that "Many of us remember a time when we would have scouted as an arrant absurdity any suggestion that literature should be studied." The case is overstated, and perhaps may mean no more than that the study of the genealogy and development of some literary forms is a modern invention. Or perhaps he wishes to say that people used to read a good deal without a grim intention of self-improvement, or that self-improvement, if regarded at all, was regarded as a certain result of constant communion with the fine spirit of literature, and not as synonymous with the acquisition of facts about literature. He expresses a regret (not bitter) that his own abundant, haphazard reading lacked a competent guide who might have helped him, earlier, to form æsthetic theories of his own. But, if he began late, he has not been idle since the waking moment, and has formed theories and formulated them with a positiveness which is interesting, but which still leaves some people unconvinced. Several of the papers in this volume were prepared for delivery before college societies, and the author shows conscientious zeal in supplying this generation with the sort of aid in which his own was deficient. He defines and discusses at length several kinds of fiction, indicates their historical and racial sources, traces the passage of the art from tales of the impossible, struggling with deformity, surviving degradation, and arriving at last at that perfection of form and moral efficiency which he calls "inevitable" fiction, and which appears chiefly to have been written by some Russians, Mr. Howells, and Mark Twain. Though firmly maintaining the superiority of the Inevitables, he is less harsh than in times past in judgment of some novelists who, with all their imperfections, have managed to hold the affection of several generations.

Scott is recognized as having a first-rate talent for historical fiction (a poor sort), and though still under suspicion of immorality, he is acquitted of any desire to corrupt. Then his strong sense for reality, shown in portraits of common people, is a solid offset to his mediæval tomfoolery, and his 'Bride of Lammermoor' is so good that we infer that an "Inevitable" would not blush to own it. This novel seems to us, remembering Mr. Matthews's favorite dictum — "Untrue, therefore immoral" — very odd selection for commendation. Untruth to character is presumably as bad as untruth about tournaments and other feudal pastimes; and of all Scott's characters none are less individualized or more rigidly conventional than Lucy Ashton and the Laird of Ravenswood. The melodramatic Laird is hardly a person, he is a pose—so perfectly a pose that his part is always best when it is sung, and the whole action seems most real when it is removed to the absolutely unreal atmosphere of grand opera. Bagehot's suggestion (quoted with assent by Mr. Matthews), that the popularity of 'Ivanhoe' is due to the fact that it "describes the Middle Ages as we should wish them to be," is one of the strained conceptions that bring critics into contempt with people of sense. Fancy legions of boys and girls rushing to read 'Ivanhoe' because it

agrees with their preconceived idea of what the Middle Ages should be! On the whole question of the comparative lifelessness and tediousness of average historical fiction, the author expresses himself with a moderation which makes his opinions agreeable even to persons who take a light view of novels and novelists, and who cannot share his passionate attachment to the theory of the immorality of creating pleasant illusions.

It is gratifying to observe that the ban has been partially lifted from Dickens, once described by Mr. Matthews as a "man of limited culture and of narrow intelligence." Dickens himself is not to blame. The change has been brought about by Mr. Gissing, who wrote a study of Dickens which moved Mr. Matthews to relax the severity of his frowning upon the novelist whose stories, as they appeared in print, had been literally fought for in the book-shops, clubs, and reading-rooms of the Empire, though fought for, of course, by people of common sympathies and curiosities, ignorant of the seriousness of the art of fiction. The same sort of people have perpetuated the fame of the 'Vicar of Wakefield,' and doubtless will continue to do so, unintimidated by the excited vituperation of Mark Twain, which is quoted by Mr. Matthews, and, though not quite concurred in, described as a "sentence of annihilation." The 'Vicar' is rather an unfortunate selection as a peg on which to hang disapproval of "lip reverence" and "superstitious veneration" accorded to the classics. Richardson, Fielding, Smollett, may fairly be called the property of the literary guild and a class that loves letters, but the 'Vicar' is the house-friend of every English family that reads anything more than newspapers or the "month's novels." Mr. Matthews once appealed to the world to adopt the phrase "British literature" for modern books written in the British Isles. The suggestion, we think, was not adopted by the natives of those islands, but it is probable that, if Mark Twain continues with approval of his compatriots to pass such sentences of annihilation, the born Britisher may accept any phrase which shall distinguish American from English criticism.

To persons not specially interested in literary history and technique, the most enjoyable essays are an excellent study of Alphonse Daudet, the friendly tribute to the memory of Mr. Bunner, and "The Relation of the Drama to Literature." Mr. Matthews's criticism of the drama always seems to us of a higher order than that of non-dramatic literature, more philosophical and less at the mercy of prejudice and fads.

Mount Omi and Beyond. By A. J. Little. London: William Heinemann.

In the coming reconstruction of China, we may expect that the railways, starting from the coast, will carry a great many tourists through the wonderful inland province of Sze-Chuan to the glorious mountain of Omi. This rises 11,000 feet in height, not far from the borders of Tibet, and about it several books have been already written by foreigners. The author of 'Through the Yang-tsze Gorges' in his new work gives us, besides his own portrait, nearly a score of very effective photographs of scenery, and a lively narrative of travel, in 1892 and 1897. He left the lowlands of smells, of uncounted graves, and of humanity congested in the river valleys, to seek the health-giving, wind-swept plateau, and to see how the world looked on the borders of Tibet.

Mr. Little brings out effectively and with wonderful clearness the contrast between the broad plain of eastern and middle China and the broken country west of I-Chang. In the one part is a succession of plains and level rice-fields, in the other, range upon range of precipitous mountains. Among these, water-courses large and small make their way, and waterfalls abound; yes, even cataracts of mud and stone. One of these the author describes on page 165. As every natural phenomenon is supposed to be in charge of a local deity, this curious place, where it rains stones and mud, is called Buddha's Ear Precipice, and here a small temple is niched into the rock. Indeed, at nearly every rapid in the many rivers of Sze-Chuan, shrines are cut out of the rock to which the passing boatmen seldom fail to pay their devotion.

In this part of China the æsthetic feeling has the upper hand. The author felt forcibly the harmony of Chinese towns and hamlets with surrounding nature far from the coast. Here abides the spirit of the "middle ages," enabling the author to realize how our own ancestors managed to live contentedly in such, to us, utter discomfort. Yet against these drawbacks are the brilliant costumes, which in western China are even more striking than the more monotonous body coverings further east. The author cannot go as far as Sir Edwin Arnold, but he gives high praise to the Buddhists for having rendered sacred all the most picturesque sites. Thus, they have preserved the great groves of shade trees around their temples from the axes of the utilitarian natives. These western Chinese seem determined to deforest their mountains, and thus do their best to aid the march of the central Asian desert. Already floods and drought are alternately depopulating the provinces which were once the home of the Chinese race and for many centuries the granary of the empire. Railways, engineering, varied manufactures, the development of mineral riches, the better science and religion that will destroy superstition which congests population around ancestral graves, will make a new China capable of sustaining many times the present population. Yet while these may do excellently, the science of forestry, in the west at least of China, will not be least in replenishing and subduing the earth so as to make it more fertile and more habitable.

The author's style is bright and crisp. In telling us about the diet and customs of this new and untravelled part of China he is very interesting. He writes entertainingly of the buttered brick-tea eaten as a vegetable, of the wonderful, costly, and numerous memorial arches; of the salt wells and the evaporation of brine by the use of natural gas; of the suspension bridges, of the abundant mineral wealth and the wretched and slow means of developing it. The auriferous quartz, if properly mined, would enable China to have a gold currency, and thus she could assimilate herself to the rest of the civilized world. Unfortunately much of Sze-Chuan is given to the cultivation of the poppy, and many of the people to opium intoxication, the use of the drug in smoking having greatly increased during recent years. Since the Japanese war, the likin, or local tax business, is worse than ever, the stations for the collection being multiplied daily on every river, road, and footpath in the country, even the interchange of products between neighboring towns being taxed.

Although the Tibetans who came down out of the highlands to visit and trade in the Chinese frontier cities are, as compared with the Chinese, far better looking and much more polite, more athletic, and trained to the use of arms in childhood, they are kept in subjection by the Chinese. Curiously enough, the Chinese have not disarmed the races which they have conquered, as is the policy of the British and other European nations in Asia. To a Chinaman the use of arms is abhorrent. The author thinks that this is a case of moral or perhaps intellectual supremacy. Perhaps it might be more accurate to say that China, under the old theory, surrounded herself with a ring of practically subsidized buffer states, and this loose but not unpractical fashion maintained order and made travel practically safe.

The descent from the healthy highlands to the opium-smoking, poverty, dirt, and smells of the China of the plains came like a shock. The author, even when unable to sleep in the inns, on account of the propinquity of pigsties, comforted himself with sweet memories of the stimulating exercise and fresh mountain air of the highlands, and even composed poetry. He lives in the hope that railways will soon give residents on the steamy plains of China free access to her grand mountains. Then such stories as these of the delays and the discomforts of travel in the nineteenth century will be deemed incredible.

Essays on the Monetary History of the United States. By Charles J. Bullock. Macmillan.

This work is a rather brief résumé of certain incidents connected with the financial history of this country, and all too brief to give a clear idea of the sequence of legislation and the influence of theories or results tending to mould that legislation. Professor Sumner's volume was as compressed a history as could be written, but, short as it is, the facts fall into regular order and tell a story which is not only intelligible, but very instructive. It would have added much to the clearness of Mr. Bullock's essays had the same method been followed. We should not then have had Thomas Paine "retorting" upon William Douglas, nor Douglas in 1749 replying to an argument of Franklin made in 1729. Nor would Pelatiah Webster, who wrote only on the paper money of the Revolution, be quoted again and again in connection with earlier colonial issues. Had the effort been confined to showing the evils and dangers attending an irredeemable and legal-tender paper currency, such anachronisms might pass; but the narration of historical events demands that statements and arguments be so arranged as to lead up to actual legislation, or to explanation of the reasons of the success or failure of a measure.

This quality introduces no little confusion into Mr. Bullock's essays. The account of the Massachusetts issues in the first half of the eighteenth century is too meagre to show why the currency influenced politics, made and unmade Governors, vitiated the morals of the people, and inflicted heavy losses upon the welfare of the province. The experience of the Continental currency, rich

in every point of view, is related in twenty pages, and, unless the reader was very familiar with the story, he would be puzzled in seeking to obtain a definite conception of what happened or was done. Exactly why the Continental Congress is generally held free from blame in beginning at once to issue credit bills has never been explained, for there was at least the alternative of letting each colony make its issues, as, in fact, each did, and of confining general action to making the issues receivable throughout the different colonies. Mr. Bullock's account of the silver agitation is very incomplete, and yet a few paragraphs more would have rounded out the chapter so that the outlines of the story could have been comprehended. The many notes show how wide a reference to authorities Mr. Bullock has made; but a more careful notice of the manner in which these authorities arrange their material would have rendered this volume more useful.

The volume closes with essays on the colonial paper issues of North Carolina and New Hampshire, containing the results of research printed more in the form of annals than of criticism or comparison. Many interesting facts can be gleaned from these essays, and even the attempt to determine exactly how much paper was outstanding in each year has met with some success. Any one who has made this attempt knows how difficult the task is, by reason of the little attention given in colonial days to carefully itemized accounts. As the foundation of a larger work, Mr. Bullock's essays have much in their favor, but the general reader will turn to Sumner, White, or Noyes in preference, even though the same ground is not covered by them.

Arte, Scienza e Fede ai giorni di Dante. Conferenze Dantesche tenute a cura del Comitato Milanese della Società Dantesca Italiana nel MDCCCC. Milan: Hoepli. 1901.

This volume of lectures, originally prepared for the Milanese Committee of the Società Dantesca Italiana, has two special claims to consideration. In the first place, most of the essays themselves are of unusual excellence, and summarize the best knowledge on their respective subjects; and, secondly, the volume as a whole may be taken as a symptom that the tide is turning in Dante studies away from philological and textual criticism, and away from the microscopic dissection of Dante himself, towards the world in which he lived. Environment can never wholly explain a supreme genius; but the more thoroughly we are acquainted with the conditions amid which he lived, the more surely shall we estimate aright how much in him was not the product of his environment at all, but sprang from his individuality.

There are eight essays in this volume besides a preface by Prof. Gaetano Negri, the general editor, who is President of the Royal Lombard Institute for Sciences and Letters, at Milan. Professor Negri, after aptly epitomizing what is to follow, gives in a few luminous pages his own views on the oft-repeated assertion that Dante was the earliest of moderns, instead of the latest and greatest of mediævals. Dante's modernness, says Professor Negri, is due to the fact that in him, "more even than the thinker and the poet, the man was actually sovereign. . . . Homer is absent to such an extent from his poem that we may doubt his existence; Shakspere hides himself behind his personages in an almost impenetrable obscurity. But the *Divine Comedy* might almost be called an autobiography, in which the poet wholly reveals himself with his ardent passions, his sorrows, his hopes, his loves, his hates." On some such basis as this should every sane study of Dante rest: to him, the man, must all earnest students constantly return, if they would not be stifled by the chaff which criticism and conjecture have poured out during the past twenty years.

Sig. Pasquale del Giudice, a colleague of Sig. Negri in the Royal Lombard Institute, begins the description of Dante's epoch by an account of Italian feudalism in the thirteenth century. He shows the evolution, particularly at Florence, of popular government, by the gradual crowding to the wall now of the imperial and now of the papal vicar; next the rise of dominant families, whose mutual animosities afforded the necessary opportunity for the middle classes and the people to win control. Sig. del Giudice offers no novel points of view, but what is quite as valuable is the remarkable clearness with which, in a few pages, he analyzes feudalism under its social, political, and economic aspects, and indicates, briefly but surely, the part each played in the general result.

Only one other lecturer, Prof. Felice Tocco, who traces the currents of philosophic thought in the thirteenth century, had a more difficult subject to treat of, and he treats this in masterful fashion. Even specialists in Dante are apt to underestimate the intricacy of the philosophic teachings of his time; Prof. Tocco describes this intricacy, but is himself clear. He hunts to their origin the mutually conflicting doctrines which became the orthodox theology of Rome, and thus lets us see how Plato, through Plotinus and St. Augustine, reached Bonaventura; how Thomas Aquinas, on the other hand, derives, in part at least, from Aristotle; how Averroës and the other Arab commentators tinged with their own skepticism the philosophy of the Greeks which they passed on to the mediæval churchmen; how the distinction drawn by Averroës between knowledge and faith traversed the position of both Platonists and Aristotelians, and subdivided them into smaller sections. So far as concerns Dante, Professor Tocco's exposition has great value, not only because it reveals the intellectual ferment of the thirteenth century, but also because it suggests valid reasons for the assignment by Dante of apparently incongruous positions to some of the chief pagan philosophers and of the doctors of the Church. Dante's final criterion was a moral one; accordingly, although this or that philosophy might err, if it were actuated solely by love of truth, he respected it. Epicurus alone he condemned to hell, and that because he believed Epicureanism to aim at sensual indulgence.

The Papacy and the Church during the thirteenth century find a sympathetic essayist in Sig. Luigi Rocca, who cannot be accused of not adducing all that was good in the efforts of Innocent III. and his successors to make the theocracy of Rome universal. Such a theocracy followed logically from premises that had been laid down without contradiction centuries before. In practice it even served a good end more than once; but it corrupted the Church as a religious institution, and it had no hope of maintaining itself when states became politically strong. The mighty pontiffs whom Sig. Rocca describes as smashing the Empire beyond hope of repair, little imagined that they were thereby helping to break up the very civilization on which the existence of the papal theocracy itself rested. Even Dante did not realize that the time had passed when Church and Empire, universal and coëqual, could flourish; but he saw the frightful perversion which the Papacy wrought in the Church, and by his terrible arraignment of it he proved again that his final criterion was moral, and thereby became the precursor of all subsequent statesmen and moralists who have held that Church and State should, for their mutual good, for ever remain separate.

As a pendant to this picture of the ecclesiastical machine grasping at universal power, M. Paul Sabatier contributes in French a delightful chapter on St. Francis and the religious movement begun by him. Admirers of M. Sabatier's earlier work will find in this epitome that rare combination of glow and poise which enables him to interpret spiritual things spiritually without for a moment losing himself in the blur of mysticism. Although his essay has only an indirect bearing on Dante, it maps out one of the great streams of influence which flowed through Dante's epoch, and it suffices, incidentally, to show Dante's attitude towards the Assisan.

Of the remaining articles, only that on "Poets and Poetry of the People," by Prof. Francesco Flamini of Padua, deserves special mention for its comprehensiveness and its easy handling of a mass of erudition. Two other literary topics are dealt with, viz., "Dante and the Study of Classic Poetry," by Prof. Michele Scherillo, whose essay lacks substance, and whose style has that adjectival inflammation which used to be chronic among Italian prose-writers fifty years ago; and "Court Life and Poetry," by Prof. Francesco Novati, who skilfully describes how, as Dante matured, the poetry of chivalry came to seem to him poor and vain in comparison with the inexhaustible treasures which he had discovered in the classics. Finally, Sig. Nino Tamassia, in a paper full of local color, sketches the daily life of the people among whom Dante moved. An appendix of notes and citations, for the benefit of scholars, accompanies each essay. From the Trivulzio collection a hitherto unpublished portrait of Dante is reproduced in colors, and through the volume are distributed half-tones of some 14th-century miniatures representing social scenes nearly contemporaneous with Dante.

We have said enough to make it clear that this volume should be prized not only by readers of the great poet, but also by all students of the wonderful thirteenth century. It is further to be commended as an example of the way in which thorough scholarship may be made popular without losing in authority. Were a similar volume to be prepared by Chaucer specialists in England and America, we might get equal erudition, but should we get equal charm of presentation? Such essays as these prove that the standard of literary and historical criticism in Italy has risen much more rapidly than most foreigners are aware. So far as concerns Dante, they furnish evidence that the best Italian scholars have realized the futility of arguing further on insoluble questions of text or biography—questions which, even if they could be solved, would still remain rela-

tively unimportant. Possibly the commentators on Goethe and Shakspere may take the hint.

Masters of French Literature. By George McLean Harper. Charles Scribner's Sons. 1901.

The consistency, or rather the continuity, of purpose in this volume of essays, to which their author draws attention in his preface, is so skilfully maintained throughout that other teachers of French literature than Professor Harper might with good reason adopt his plan and procedure as a basis for a series of comprehensive didactic lectures. After an introductory chapter, which seeks to place the literature of France in its fitting relations to the other leading literatures of Europe, the writer travels by rapid stages, through the "Grand Siècle" and the era of revolution indirectly heralded in Saint-Simon, down to the epoch of Romanticism as shown in the work of Hugo, Sainte-Beuve, and Balzac; and thus, in broad topographical outline, the view is accurate and complete. Such deficiencies as we may find here are therefore owing to sketchiness of method, not to insufficiency in knowledge or treatment. It is, however, not altogether fair to Voltaire to quote again (p. 77) his famous "drunken savage" phrase describing Shakspere, without the corrective tag which the complete passage from the introduction to "Sémiramis" so easily supplies. Neither is it an adequate explanation of classicism to judge it as "originating largely in Racine," and being "at any rate purely French in origin" (p. 193). As regards the first point, the dramatic principles applied by Racine to his own plays had been recognized and adopted, both in France and elsewhere, by dramatists of no mean order long before the middle of the seventeenth century; Racine, with supreme mastery of his restricted art, naturally became the model for a succeeding generation. But the real dictator was the indomitable Boileau. Yet, with all these attempts at explanation, it must be remembered that vast literary movements, concurrent (or nearly so) in more than one country, depend also on prepared tendencies in the collective human mind, and thus present a psychological problem explicable through no known cause, reducible to no known law. The seeds of classicism did not fall in stony places.

Dealing with the Revolutionary period, the author might have dwelt more emphatically on the influence which Montesquieu's writings exercised upon political speculation outside of France, notably upon the ideas of Burke. Many a telling passage in the latter's polemics is conceived in the spirit of Montesquieu's warning, "Combien il faut être attentif à ne point changer l'esprit général d'une nation" ('Esp. des Lois,' xix. 5); and both these masters of thought insist on the inseparable continuity of movements, political and social, thus refusing, as Burke says, "to reduce men to loose counters, merely for the sake of simple telling, and not to figures whose power is to arise from their place in the table." We must further add that Montesquieu and Burke would probably have agreed in judging "Le Mariage de Figaro" to be not so much "political in fundamental conception" (p. 108) as passionately directed towards the social claims of equal rights and opportunities for all the sons of men; that being the unmistakable purport of the splendid, though intrusive, monologue in the garden scene.

Professor Harper's treatment of Sainte-Beuve, though in the main sympathetic and generous, displays the traditional "Anglo-Saxon" disrelish of criticism that deliberately evades moral issues. What appeals to other readers of Sainte-Beuve is precisely the combination of unrivalled delicacy of literary *flair* with exclusively artistic prepossession which renders his work so free from doctrinairism. When we read (p. 233) that " it is to Sainte-Beuve's honor if he is named at all in such company" as Lessing, Goethe, Shelley, and Matthew Arnold, we feel constrained to reply that such honor is liberally reflected; one who, during the whole of his literary life, helped " to establish the reputation of the few supreme writers" may stand on his own merits in any company of men of letters. And the writer of 'Qu'est-ce qu'un classique?' is certainly entitled to the right.

Professor Harper's last essay, which discusses Balzac, raises so many points relative to æsthetic "ultimates" that a reviewer is hampered in dealing with this theme. The initial sentence, which declares that "the acts of a human being are memorable in so far as they benefit mankind," constitutes a postulate that is not only disputed, but disputable. Judged by this standard, much of Balzac's work may be promptly brushed aside as unworthy of consideration. The author of the "Comédie Humaine" certainly deemed himself a *voyant*, intrusted with a mission that was little short of sacred; but it may safely be doubted whether the falsification of conceptions bearing on life and the art of the novelist, from which French fiction suffers to this day, is not almost directly traceable to his overmastering power. But if we accept his postulates, the truth of Balzac's treatment of human character is so faithfully consistent that one wonders why any attempt should be made to discriminate between the good and the bad in the stupendous series. The critic who excludes 'Le Lys dans la Vallée' as "the most falsely sentimental book in the world," or 'Splendeurs et Misères des Courtisanes' as "a phantasmagoria of impossible infamies," may find it difficult to reconcile the absurdities in plot and character of 'La Femme de Trente Ans' with the idea of a "splendid novel" (pp. 305, 315). It is singular, also, that this essay makes no mention of 'Le Cousin Pons.' But the general grasp of the subject, as well as the firmness in execution, shown in this more than usually coherent volume of studies once again exemplifies the quality of critical work to be expected from our leading centres of learning.

Cameos. By Cyril Davenport, F.S.A., of the British Museum. London: Seeley & Co.; New York: The Macmillan Co. Pp. viii, 66.

This book about the once fashionable jewel and the always beloved work of art, the cameo, is one of the *Portfolio* Series of Monographs. It is illustrated by colored plates based upon photography, by monochromatic half-tone prints, and by other prints from wood blocks or the like; in all, about thirty full-page plates and a few text illustrations. In this way, perhaps, sixty famous cameos are fairly well represented.

The text is better than the illustrations, for it reaches a very high standard of mingled historical and critical explanation, while still remaining a popular treatise. The reader is told in chapter i. about the materials used and the processes employed; in chapter ii. he reads of the cameos of very early times, and of those imitations of cameos in glass paste which are themselves a very interesting subject of study; chapter iii. deals with Greco-Roman and Mediæval cameos, though the last-named subdivision of the subject is, for excellent reasons, not a large one; and in chapter iv. Renaissance and later cameos are treated in an essay which, though not the longest of the four into which the book is divided, will perhaps be found the most entirely satisfactory. For one thing the American reviewer welcomes this English book—for the recognition of the fact that there is an epoch in fine art later than "the Renaissance"; for it is too much the habit of the English writers on similar subjects to treat everything since the revival of art in 1420 as belonging to this one category, the Renaissance.

There is but a single fault to find with this very useful handbook. We mean the too great comparative emphasis laid upon the accounts given by ancient writers of cameos which are lost to the world. To any one who has noted the way in which Greco-Roman authors have dealt habitually with matters of fine art, it is altogether clear that the fullest descriptions of those writers should be accepted only as giving hints and suggestions. There is no exception to this. No writer of the classical epoch talks about the work of art, even the great wall-painting or the sculptured group of national importance, as if it were anything more than a curio. But the very object of modern research and discussion of a work of art is to point out to the careless world how little of the curio and how much of the serious work of art there is in the more important relics of the past. This objection, as soon as made, must be counterbalanced and set off by the praise to be given for the great good sense shown in classing the works of art under consideration, not by their material, but by their workmanship and their epoch. Thus, it is altogether fortunate that the glass-carved pieces, the Portland Vase, the Naples *Vase des Vendanges*, the Auldjo Vase, and the richly mounted chalcedony vase recently given to the British Museum are all treated together, although three of the pieces named are glass, and the fourth is a precious natural stone. The book is to be taken as a popular exposition of the subject, and in that capacity is as good a one as could reasonably be wished for.

The Germans in Colonial Times. By Lucy Forney Bittenger, author of 'Memorials of the Rev. J. B. Bittenger' and of 'The Forney Family of Hanover, Pa.' Philadelphia: J. B. Lippincott Company. 1901. Pp. 314.

The author has attempted in these pages to bring within the compass of a single rapid narrative a résumé of all that local annalists, in different parts of the country from Maine to Carolina, have brought to light concerning the first German settlements in the different colonies. The book has more merit and fewer defects than volumes similar in design often possess. While

it is not without its errors of interpretation and statement—among which may be cited the claim made on page 247, that David Rittenhouse, who was of Dutch stock, was a German, and the assertion made on page 256, that Dr. John Connolly, who was exchanged in 1780, was kept a prisoner until the close of the Revolutionary war—on the other hand many facts are given which, while not of special significance so long as they remain isolated, go to justify, when collated, the author's view that a mistaken emphasis is put upon the purely English element of the American people.

Among the not uninteresting facts given are that United States Senators Frye and Fessenden were offshoots from the German settlement of Fryeburg, in the eastern foothills of the White Mountains; that John G. Saxe, the New York poet, whom Mr. Stedman strangely excluded from his recent anthology, was an offshoot from a German settlement in Massachusetts, the poet's grandfather being one Daniel Sachs; and that the Waldo family, from which Ralph Waldo Emerson took his middle name, was of German origin, Von Waldow being converted into Waldo. The founder of the German settlement of Waldoboro in Maine, by the way, seems to have been guilty of deceiving his colonists; and we hope the author is not entirely exact when she says that he became a typical American, for Gen. Waldo failed to provide for his settlers the shelter and church which he had promised them, and he abandoned them to a condition of life in which they were without clothing, chimneys to their houses, mills to make flour, or ovens to bake bread—the colonists whom Waldo had deluded into coming to America living through their first winter upon rye bruised between stones and made into broth. These Germans participated in the siege of Louisburg.

The records made by the colonial Germans of New York, Pennsylvania, New Jersey, Maryland, Virginia, the Carolinas, and Georgia are fully exploited. In all these colonies the Germans at an early day had important settlements, towns, schools, churches, and industries, and from these colonies sent contributions of soldiery to our early wars, statesmen to our early councils, and men of high character and learning to many walks of life.

BOOKS OF THE WEEK.

"Alien." Another Woman's Territory. T. Y. Crowell & Co. $1.50.
Bigelow, Poultney. The Children of the Nations. McClure, Phillips & Co. $2.
Comstock, G. C. A Text Book of Astronomy. D. Appleton & Co. $1.30.

Penobscot Bay,
MAINE.

FOR SALE.—The finest large shore tract in this section left unoccupied and for sale at prices of ten years ago. The property comprises 400 acres of land, with nearly four miles of shore front; has beautiful headlands, cliffs, coves, and beaches. The land is much diversified in character, alternating between heavy woodland and open fields. There is a great variety of beautiful drives through and around the tract. Steamboat landing, with daily communication with Boston, near the property. Most exquisite views of bay, ocean, islands, and mountains everywhere. Islesboro and Castine are within five miles of the land. There are two farmhouses and a pond on the property, and several salmon privileges on the shore. Address

JOAN OF ARC. By FRANCIS C. LOWELL.

$2.00. "As a piece of historical biography it is a noble success."—*Am. Historical Review.*

HOUGHTON, MIFFLIN & CO.

IF you own a garden, a country house, an herbarium; if you are a naturalist, a botanist, a sportsman, or a lover of nature, *send for our catalogue of out-of-door books.* Each volume named below is important.

Home Life of Wild Birds

A new method of Bird Study and Photography. By FRANCIS H. HERRICK, of the Department of Biology in Adelbert College. 141 illustrations from original photographs. Nearly ready. $2.50 *net.*

The most important bird book of recent years. Profusely illustrated with original half-tones from photographs taken at short range, the equals of which have never before been produced.

Ornamental Shrubs

By LUCIUS D. DAVIS. Over 100 illustrations. Uniform with "Lawns and Gardens." 8vo, gilt top, pp. 338. $3.50.

Among the Moths and Butterflies

By JULIA P. BALLARD. A revised and enlarged edition of "Insect Lives." 8vo, pp. 273. $1.50.

Nature Studies in Berkshire

By JOHN COLEMAN ADAMS. Large 8vo. POPULAR EDITION NEARLY READY. Illustrated. $2.50 *net.* Photogravure edition, with 16 illustrations from original photographs by Arthur Scott. pp. 225. $4.50.

This book has had great welcome from those readers who have an appreciative ear for nature's "various language."

Landscape Gardening

By SAMUEL PARSONS, Jr., Ex-Superintendent of Parks, New York City. Nearly 200 illustrations. Large 8vo, gilt top, pp. 351. $3.50.

A praiseworthy work by an authority on the subject.

Our Insect Friends and Foes

How to Collect, Preserve, and Study Them. By BELLE S. CRAGIN. Over 250 illustrations. 8vo, gilt top, pp. 412. $1.75.

The foregoing are only a small selection from our list of valuable out-of-door books.

NEW PUBLICATIONS.

Comprehensive Scholarly Interesting

A HISTORY
OF THE
American People

By FRANCIS NEWTON THORPE, Ph.D., Author of "A Constitutional History of the American People," "The Constitutional History of the United States," etc.

An enjoyable work for busy men and women, as well as the best compendium of American history for the student that has yet appeared.

Professor Thorpe's name is familiar to every student of history as the author of a number of exhaustive, scholarly works, as well as through his work as a lecturer on history. This new book, however, is of much more general interest than any that he has yet written, for it fills a gap in our literature which the late Moses Coit Tyler pointed out—the need for a one volume history of our country which is at once exact in scholarship and readable as literature.

12mo, with Maps and Index, $1.50.

GARCILASO
By J. BRECKENRIDGE ELLIS, Author of "The Dread and Fear of Kings."

An exceedingly interesting tale of Spain in the time of Columbus, containing a life-like portrait of the Spanish hidalgo.

"One of the best historical romances of the season."—Chicago Chronicle.

"A lively chronicle, full of sword play and daring escapades . . . the adventures of the hotblooded hero are projected against a well-drawn historical background."—Detroit Free Press.

"A series of thrilling adventures."—Chicago Evening Post.

12mo, $1.25

BIRTH
A NEW CHANCE
By COLUMBUS BRADFORD.

A live treatment of the questions of man's origin and destiny. Theosophists and those interested in the theory of reincarnation will follow with interest the acute reasoning of the author in support of his hypothesis that the dead live again by being born again.

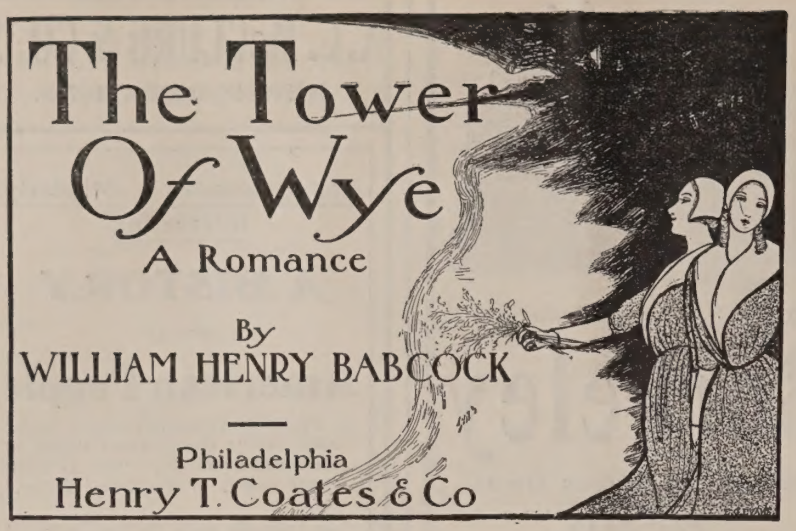
12mo, $1.50

A DAUGHTER OF THE FIELDS
By KATHARINE TYNAN (Mrs. Hinkson), Author of "The Handsome Brandons," etc.

The latest and one of the most delightful novels of this favorite author.

12mo, $1.50

Of booksellers generally or the publishers
A. C. McCLURG & CO.,
CHICAGO.



PUBLISHED APRIL 23.

Second Edition (4th Thousand) In Press BEFORE PUBLICATION.

William S. Walsh says: "I dare assert that of the historical romances that have lately appeared none is better than 'The Tower of Wye.' It is a joyous story, redolent of youth and spring and the glory of the morning."

Octave Thanet says: "It seems to me the best thing you have done; and Richard Smith a right valiant noble gentleman. You have, I think, caught the very spirit of the time."

L. de V. Matthewman says: "It has in it the making of a brilliant success, and should be as popular as any of the recent historical romances of America. Its pages are peopled, not with lay figures, but with living creatures; the scenes are not surface paintings, but landscapes and seascapes in relief. The style of the narrative is very pleasant,—clear, epigrammatic, and breathing the spirit of the time. The quaint, subtle humor fits the story and the style. The love interest is strong and natural, without any taint of modern erotism. The superstitious spirit of the age is clearly shown. . . . It is as real as 'Robinson Crusoe.'"

PUBLISHED APRIL 30.

IN SEARCH OF MADEMOISELLE.

Written and Illustrated by GEORGE GIBBS.

Cyrus Townsend Brady says: "Mr. George Gibbs has chosen the most romantic and terrible episode in the whole range of American-Colonial annals as the historic basis of his vivid romance. He writes as he paints, with graphic force and spirit."

John Habberton writes: "I've read your 'In Search of Mademoiselle' with great interest. I must congratulate you on your success in retaining throughout the novel the old-time atmosphere in which you began. No writer of historical novels has done this better than you; few have done it so well."

LONGMANS, GREEN, & CO.'S NEW BOOKS

The Law and Policy of Annexation.

With Special Reference to the Philippines. Together with

Observations on the Status of Cuba

By CARMAN F. RANDOLPH,
Of the New York Bar, Author of "The Law of Eminent Domain."

8vo, pp. xi-226, $3.00.

"A work of great merit, exhibiting wide research, patient analysis, and the frankest possible expression of the conclusions to which the author's logic tends. His views are not those of any party or faction, but the independent opinions of a man learned in the law and inspired with unaffected patriotism."—*Washington Post.*

"It presents the most complete view as well as the best discussion of all the issues and all the arguments connected with our present annexation of new land."—*Boston Transcript.*

"The discussion is keen, logical, lucid."—*Chicago Evening Post.*

"Probably the most learned and careful argument that has been presented to the public."—*Albany Argus.*

"A rare example of an admirably balanced, temperate and judicial inquiry into the foreign policy of the United States."—*Philadelphia Public Ledger.*

NEW VOLUME BY EDMOND KELLY, M.A.

Government Or Human Evolution.

II. Individualism and Collectivism.

By EDMOND KELLY, M.A., F.G.S., late lecturer on Municipal Government at Columbia University, New York. Crown 8vo, $2.50.

The Theology of Albrecht Ritschl.

By ALBERT TEMPLE SWING, A.M., Professor of Church History in Oberlin Theological Seminary. Together with **Instruction in the Christian Religion**, by ALBRECHT RITSCHL. Translated by permission from the *Fourth German Edition* by ALICE MEAD SWING, A.B. Crown 8vo. *Net*, $1.40. By mail, $1.50.

Pastorals of Dorset.

By M. E. FRANCIS (Mrs. FRANCIS BLUNDELL). With 8 illustrations by CLAUDE DU PRÉ COOPER. Crown 8vo, $1.50.

My Experiences of the Boer War.

By ADALBERT COUNT STERNBERG. Translated from the German. With Preface by Lieut.-Col. G. F. R. HENDERSON, Author of "Stonewall Jackson and the American Civil War"; late Director of Military Intelligence, Headquarters Staff, South African Field Force. Crown 8vo, pp. xliv.-268, $1.50.

The Nation.

NEW YORK, THURSDAY, MAY 16, 1901.

The Week.

Another important change of steamship control—the purchase of the Atlas Line by the Hamburg-American Company—comes to cast its light upon our sacred tradition that "trade follows the flag." In this case it was plainly the reverse—the flag saw existing trade and ran after it, and got it. "Trade follows capital" was the heartless way in which the Chairman of the Leyland Line stockholders explained the sale of their fleet to J. P. Morgan & Co. In other words, if money sees a prospect of a good return when invested in shipping, invested in shipping it will be, and the flag is simply *post hoc*. German merchant tonnage has, indeed, increased amazingly during the past thirty years. It was but 167,000 tons in 1873; in 1898 it was more than 1,000,000 tons. But we may be sure that it was expanding German manufactures and commerce which created the German merchant marine, not the marine which created the manufactures. In other words, it is not the outlet which fills the reservoir. German success on the ocean cannot, in any event, fairly be made to furnish water to the mill of the subsidy-seekers, since the Hamburg Company has risen to its present powerful position in the shipping world—owning 120 steamers of 630,000 tons—without any subvention from any Government.

More mutterings are heard of a European combination to resist American competition. But the troublesome details of such an anti-American League have not been anywhere brought to paper. We doubt if they can be. Is a tariff war on our products intended? Then this must be carried on under general laws. Germany or Austria cannot have two tariff faces, like Browning's lover, one to show the world, and another to show America when she is *not* loved. Treaty obligations stand in the way of any such scheme. And what shall it profit one European Power to strike at American exporters if, with the same club, it must belabor the heads of its neighbors, and be by them thwacked in turn? There is, to be sure, the old alternative of a general European Zollverein, within which reciprocity and low tariffs are to prevail, while outside maximum rates are to keep off the rude American. But the fiscal difficulties in the way of such a plan are, in each country, so insurmountable that it has the smallest chance of being adopted this side the millennium. At the same time, Americans would do well to give sober heed to these multiplying signs of European hostility. If not a combined tariff movement against our exports, we may count upon a series of separate tariffs aimed specifically at us, unless we hasten to follow the President's advice and make our own tariff laws more liberal. It is not merely our swelling foreign commerce that excites apprehension in Germany and France. There is ill-feeling there, and no wonder, at the Senate's contemptuous refusal even to consider the reciprocity treaties. That looked as if we were bound to be unreasonable, and justify them in being unreasonable, too. But trade requires the lubricant of something like cordial relations between the two parties to it. We should not aspire to be regarded, as there are signs that we are rapidly becoming in Europe, the best-hated nation.

The *Independencia* of Santiago de Cuba learns that

> "President McKinley has promised our Commissioners, after the republic is constituted and the political situation is settled, that he will attend to economical problems, and that the two houses—which voted the joint resolution of 1898 and the Platt amendment—will fix upon the economic concessions which will be made to us, to the end that—we may not die of hunger."

Of course all such promises are verbal. Nobody either in Washington or in California can say what Congress will or will not do with reference to the duties on sugar and tobacco. Hence, if President McKinley or Secretary Root were in the mood to make promises by word of mouth, they might as well promise 50 per cent. reduction as 20 per cent. The *Independencia* perceives the humor of the situation. Accordingly it asks: "By whom and how are these promises to be guaranteed? Who signed the Teller resolution and who signed the Platt amendment? As one law repeals another, and as the same House can take two distinctly different actions, we do not believe that our commercial and economic privileges are in any way guaranteed." The opinion gains ground that the Platt amendment will be accepted, but not without a full understanding that it demolishes Cuban independence.

One seems to detect a kind of shamefaced air in the very terms in which the Ministers at Pekin have at last formulated their demand for an indemnity. After fixing the total at the enormous figure of $337,000,000, they innocently ask China how she expects to be able to pay it. The first idea of arranging a sort of guarantee for the indemnity among the Powers themselves seems now to be abandoned. China must find the money. If she says she can do it, what more natural result could she look for than that the foreign troops should conclude to quarter themselves longer upon their unwilling host, and enlarge their bill for entertainment accordingly? If China vows that she cannot pay so large a sum, then the Powers will begin to eye with envy her securities in the way of real estate and movables. It is cheerfully suggested that the indemnity of 450,000,000 taels can be raised by increasing customs taxes. But the entire revenue from customs taxation, in the last year of good trade, 1899, was only 27,000,000 taels. To increase that to the needed extent would mean a frightful derangement of business. Evidently the diplomats are going to make sure that they shall never have occasion, like Clive, to be astonished at their own moderation. As for our own Government, after having urged $200,000,000 as the maximum indemnity, we do not see how it can join in any coercive measures to extort from China nearly twice that sum.

A French economist, M. Raphaël-Georges Lévy, brings together in the *Revue des Deux Mondes* for May 1 a great deal of valuable information bearing on Chinese revenue and expenses, debt and taxation, and financial control by both imperial and provincial authorities. To go back to the period just anterior to the war with Japan, China's budget was balanced at about 89,000,000 taels (say $65,000,000). The taxes laid to produce receipts at that figure were a land tax, maritime customs, a duty on salt, the *likin* (internal customs on goods in transit), a tax on rice and on opium. The land tax is primarily a provincial tax, a portion of it being passed on to the central government. As under our old Confederation, a requisition for a certain amount is laid by the Council of State upon the various viceroys, and they pay, as the colonies used to pay, when and as much as convenient. M. Lévy prints a table showing discrepancies of millions between the amounts which the provinces are supposed to pay to the general Government and the amounts they do pay. He also makes it clear that a much greater sum is raised by the land tax than ever finds its way into either the provincial or the imperial Treasury, and says with probable truth that corruption and peculation are rife in this branch of Chinese taxation.

China's public debt, prior to the Japanese war, was but trifling. Since 1894, however, she has been compelled to float several large loans at ruinous rates, until now the total is just short of $300,000,000, on which the interest charge, with the sinking-fund requirements,

amounts to about $20,000,000, or nearly one-third the old national revenue. If now this foreign debt is to be more than doubled by the indemnity, it is evident that the revenues of China must be greatly increased, or else a radical reorganization of her whole financial service undertaken. To increase taxation seems almost impossible, in the case of a people between the great majority of whom and starvation so slight a margin always exists. Can, then, the Government be reformed in such a way that the taxes actually collected shall not be squandered or stolen, and so prove sufficient for the enlarged demands? M. Lévy seems very hopeful that something of the kind may be done; and that the salt tax, the rice tax, the opium tax, and the land tax can be administered under foreign control, as the maritime customs have now been for more than thirty years under the direction of Sir Robert Hart, with similar results of greatly increased efficiency, honesty, and larger receipts. This, however, is not a matter to be settled off-hand. It is one thing to preside over the collection of taxes at a few seaports, but quite another to undertake control of the whole internal system of taxation throughout a vast empire.

Ex-Senator Gorman of Maryland has found that the election law which he pushed through the Maryland Legislature at a special session called for the purpose, a few months ago, is a boomerang of the worst sort. His idea was to frame a system under which illiterate white Democrats could vote while ignorant black Republicans could not. Independent legislators of his own party insisted upon eliminating the worst features of his scheme before it was enacted, and the trial of the new law at the municipal election in Baltimore on May 7, like the earlier one at a similar election in Frederick last month, showed that the Democrats have practically gained nothing by the change. The managers of each party teach their illiterates how to pick out on the ballot the names which they should mark, and it has been found that the blacks are more ready to learn than the whites. Independent voting seems to have been encouraged by the new law in Baltimore, as in Frederick; and last week's results in this respect were most encouraging. Democrats who care more for good government than they do for party, either refrained from voting or supported Republican candidates, and the Democratic majority of 8,633 two years ago was transformed into a Republican majority of 2,250. Rasin, the disreputable lieutenant of Gorman, had come to the front once more, and his chief shares in the stinging rebuke which was administered. It is a most cheering sign of the times that the Independent Democrats of Maryland continue bitterly opposed to Gormanism, and it seems reasonable to hope that this pernicious influence will never recover the power which it so shamefully abused.

The New Yorkers who visited Texas in a body, representing the Chamber of Commerce and the Merchants' Association, have returned gorged with facts, and brimful of enthusiasm for the country and people that entertained them. They say that Texas is a State of "illimitable resources, the development of which has only just begun." They discovered that the inhabitants are very much the same kind of people as New Yorkers, not at all inferior in point of character, intelligence, public spirit, patriotism, and the civic virtues. They have returned home with ideas much enlarged and improved, and they undoubtedly created the same favorable impression in Texas that they received there. It is seldom that the good feeling of the vistors and the visited finds such mutual hearty expression. Among the incidents of the trip was a speech on the Texas Anti-Trust Law by Mr. J. B. Dill, which that gentleman delivered at a banquet in Dallas. The good taste of this speech (which is published in the Galveston *News* of May 5), or of any speech on that subject by a visiting delegate, may well be questioned, for, however much the speaker may disclaim the thought of dictating a public policy to his entertainers, it must have more or less the appearance of a reproof *ex cathedra*. It was taken in good part, however, by the listeners, many of whom evidently agreed with the speaker in the opinion that the Anti-Trust Law of Texas is too drastic. We cannot think, however, that capital is deterred from entering Texas by that law. Even the Standard Oil Company has built a large refinery and made an extensive outlay for the storage and transportation of oil at Corsicana. It maps out its territory and transacts its business from that point with as much intrepidity and abandon as in any Northern State.

The scandalous abuse of our Italian immigrants, chiefly by their own countrymen, has long called for reform, and now a Society for the Protection of Italian Immigrants, lately incorporated under the laws of this State, is to undertake this work. An agent of the society will be ready at the Barge Office to warn the newcomers of the worst impositions before them, and to direct them to suitable lodging places. As soon as its resources will permit, the society means to have its own lodging-houses. To attain its highest usefulness, the society must organize an employment bureau, and supplant the "padroni" and "banchieri," who now render their compatriots a real service, but at a most extortionate price. It is doubtful if the padrone system can be abolished, or, even, that it should be abolished. Somebody must manage the affairs of these immigrants, helpless among new conditions, and it is probable that effort could better be directed towards securing an honest class of "padroni" under the direction of the society, than in organizing an impersonal employment agency, which the Italians would not understand and would probably distrust. The plan of encouraging the newcomers to go to the country and become farm laborers or farmers is an admirable one. This is the natural calling of most of them. Whether that eminently sociable race can stand the loneliness of an American farming community is another question. In Italy, it will be remembered, the villages are closely built, and offer many civic attractions. The laborers in the fields have the privilege of swarming together every evening in the town, and it is doubtful if they will forego that privilege lightly. Such problems, however, the society will handle one at a time as its work broadens. Meanwhile it has an immediate task of staving off the extortioners that beset the Italian as he lands.

It is not surprising or discouraging that there should have been a disorderly element at the mass meeting in Cooper Union last week, under the auspices of the Committee of Conciliation of the Civic Federation, which hissed those representatives of labor who expressed conservative views, and which called for a policy of force, instead of one of arbitration. The really significant and important feature of the gathering is that leaders of so much influence with workingmen as President Gompers of the American Federation of Labor and John Mitchell, President of the United Mine Workers, were ready to take their stand openly and strongly in favor of moderate measures. What the National Committee on Conciliation propose in their report is, that a board or commission shall be established, the scope of whose work shall be to promote the conviction in the public mind that such industrial disturbances as strikes or lockouts can and should be avoided; that the only sure way of avoiding them is through full and frank conferences between employers and workingmen, to reach an agreement as to terms; that, while organizations to consider such questions are valuable and to be utilized, the true and safe policy is conference and agreement between employers and workmen covering as large a constituency as possible; and that "the surest way to keep organizations of employers and workmen free from unwise and injurious action is through cooperation, and the mutual education and respect which will inevitably follow from it." The proposed board or commission is to be composed of the most competent persons available, "selected from em-

ployers and employees of judgment, experience, and reliability," and it will be expected to make known to workmen and employers that its counsel and aid will be available, if desired, in securing coöperation, mutual understanding, and agreement.

An example of voluntary arbitration which has proved successful is reported from Boston. There was a disagreement between the master-builders and an association of bricklayers regarding the wages basis upon which the arrangements for the year's work should be made. Both parties were ready to submit the issue to Mr. Charles Francis Adams, 2d, who has large interests in real estate and building enterprises, and thus is exceptionally well qualified to pass upon the matter intelligently and impartially. His decision was in favor of the men, to the extent that he held they ought to have an advance of five cents an hour, and it was cheerfully accepted by the master-builders, as apparently a contrary one would have been by the bricklayers. A noteworthy feature of the matter is that Massachusetts maintains a State Board of Arbitration, but that neither side to the controversy thought of having recourse to it. Neither employers nor employed seem to take kindly to the idea of compulsion in the settlement of disputes—even if it be carried no further than the picking out of the men to whom they must submit their case.

Sir Michael Hicks-Beach has earned the respect of his opponents, and to a large degree the admiration of distant observers, by the intrepidity of his course in reference to the export tax on coal. Hardly anything could have been advanced by a Chancellor of the Exchequer so likely to provoke anger and determined resistance on the part of both labor and capital. The Chancellor has met the opposition, both in and out of Parliament, as a man who knows his ground, and who, while willing to be convinced by reason, is not willing to yield to pressure. Most of all is he to be praised for plainly telling his own party in the House of Commons that, since they placed upon England the financial burden of the war in South Africa, they must now put their hands in their pockets and pay their fair share of it, and not push it all upon posterity in the form of an increased national debt. He has extended this admonition to those statesmen of the Liberal party who have been so fierce for war. He has said to them, and to all who have attacked his policy, that nothing could be more agreeable to himself as an individual than to resign the cares of the British Exchequer and to commit to other hands the task of balancing the budget, but that, while that task is his, he must have the coal tax, and the sugar tax without any protectionism in it.

Incidentally the discussion of the export tax on coal has thrown some light on the question of American competition in the markets of Europe. Not much stress was laid upon this danger by the opponents of the tax. They had much to say about German competition in Continental markets. Some of the remonstrants pointed to future competition from America, when the cost of winning the coal in Great Britain should be still further enhanced by the increasing depth of mines; and it was affirmed, truly enough, that in South America, and in any markets where the cost and time of transportation are about equal for the two countries, the advantage of the United States would be increased by the amount of the export tax. But it was not contended that American coal could compete dangerously with English at present in the Mediterranean ports, or in those of the Baltic and North Seas, even with a shilling per ton export duty on the latter.

In spite of the urgent whip for the division on the coal tax in the House of Commons, the theory that the British Government is riding for a fall receives some confirmation from its introduction of a bill to revolutionize the whole system of primary education. There is scarcely any other domestic question that would arouse such strong feeling, or would cause such cleavage in the ranks of those who support the present policy in South Africa. In 1896 the Government of the day had to drop its Education Bill like a hot potato, mainly because of vigorous opposition from its own side, and the Education Act of 1897 was pulled through only by the ingenious use of a parliamentary device that limited discussion in committee. In neither of these years was any attempt made to deal with more than one section of the subject, but the controversy was of the keenest. The measure now introduced will be interpreted as a deliberate endeavor to overthrow the school-board system, and will accordingly be the signal for the beating of the drum ecclesiastic by Nonconformists from one end of the country to the other. It will bring to a head the dissatisfaction caused by the recent Cockerton decision, which makes it impossible for the larger board schools to continue the work which they have been doing for several years in supplementing their elementary teaching by technical courses.

The obvious delight of the Irish at having one of their newspapers seized by the Government for insulting the King indicates the nature of the mistake made by the Ministry. They have furnished the wind to fly this new Irish kite, which, if they had let it alone, would have fallen helplessly to the ground. As it is, they have taken the infallible means of sending the scandalous attack upon King Edward reverberating around the world, at the same time that they have given the *Irish People* an advertisement of the highest value. But there is, in the incident, a plain revelation of the drift to excessive adulation of the throne now observable in England, as also in Germany. It is, as Mr. Goldwin Smith has pointed out, a necessary accompaniment of the lurch away from Liberalism and into Imperialism. Court ceremonial is made unprecedentedly gorgeous; the person of the monarch becomes sacrosanct; *lèse-majesté* is regarded as a kind of blacker atheism. No one supposes that the King himself prompted the seizure of the *Irish People*. Very likely he, as a man, would have smiled at it as "only pretty Fanny's way," and thrown it into the waste-basket. But his Ministers felt that the awful reverence due him as a sovereign could not be broken through thus ruthlessly without impairing the recovered conception of divine-right royalty, now put into such deliberate play to impress the imagination of the people, and make them vote supplies in a becoming spirit of docility.

Those expatriated Russians, the Doukhobors, who to the number of 8,000 have settled during the past two or three years in the Canadian Northwest, do not find such perfect liberty in the country of their adoption as they had hoped. As is well known, the Doukhobors are a sect of Christians who take their New Testament with inconvenient literalness. They object to the individual ownership of land, for example, yet the Canadian Government comes along and insists, according to law, upon registering their lands by the owner's name. But there is no one owner, protested the Russians; register it in common. Officialdom, however, saw nothing of that kind written in the statute, and besought the primitive Christians to be "sensible" and register their holdings; while the primitive Christians complained that officialdom was trying to make them false to faith and conscience. There is also trouble about state control of marriage, and official records of births and deaths; all these things the Doukhobors wish to keep themselves as a part of their religion. They have issued a simple-minded "address to all nations," asking if there is anywhere a "country where we should be tolerated, and where we could make a living without being obliged to break the demands of our conscience and of the truth." These Russians are excellent colonists, yet the Canadian authorities are puzzled what to do with them.

THE "COMMUNITY OF INTEREST."

The course of events in the stock market since the beginning of the present year has been without precedent in this country or in any other. Its chief feature and impelling cause, called the "community of interest," was a new thing in the world of finance, and was well calculated to excite the public imagination. For a quarter of a century public opinion had squared itself by the anti-pooling clause of the Interstate Commerce Act, and all the powers of Government had been used to enforce it. Laws to prevent the consolidation of railroads and to keep competition alive had been passed by the State Legislatures; and Railroad Commissions had been appointed to correct abuses and in some cases to regulate railroad charges. The capitalists controlling the roads had finally hit upon a method of stifling competition in spite of the Interstate Commerce Law and of the Anti-Consolidation Acts. By virtue of the "community of interest" plan, certain groups of capitalists controlling a particular line of transportation bought a preponderating share of the stock in a competing line, or a share sufficiently large to acquire a representation in the direction of the competing line. Thus the Pennsylvania interests came into possession of a large part of the Baltimore and Ohio.

The execution of this plan necessitated large purchases of shares in the open market, and rapid advance in prices, which stimulated buying by the public. This in turn stimulated the capitalists to continue the operation, by teaching them that there were plenty of people to take the property off their hands in case of need. One such case was the attempt of the Great Northern and Northern Pacific group to secure the Milwaukee and St. Paul also. They ran the price up to an astonishing figure, but failed to get the control, yet other people were quite willing to take the stock off their hands, at a net profit to them. The "community of interest" idea had taken possession of the public mind as a limitless source of wealth. About the same time the great steel combination was formed, with its billion and a half of capital, a "community of interest" on a still grander scale, and was soon followed by numerous smaller ones which are yet in embryo. The movement continued until the wisest men in the financial world were baffled, and the silliest ones said that this was the greatest country in the universe, and that stocks were cheap at the highest prices that had ever been conceived.

There came a time, however, when two communities of interest impinged against each other. The Great Northern and Northern Pacific community, having failed to get control of St. Paul, turned its attention to Burlington and Quincy—a property which lay principally in what the Union Pacific community considered its territory. Whether any steps were taken by the former group to conciliate the latter before acquiring the Burlington, or whether any remonstrances were made by the latter to the former, is not known. It is certain that the Union Pacific community considered itself encroached upon by its Northern neighbor, and decided to fight. It sought to prevent the purchase of Burlington by acquiring control of the Northern Pacific and paralyzing the would-be purchasers. It bought Northern Pacific shares, both at private sale and in open market, till the price reached a giddy height, and then found that the stock was cornered. The speculating public had joined in the tumult.

Private adventurers, who knew not the cause of the up-rush, had "sold short," because they knew that the price was artificial, and must come down some time. In a general way they were right, but they had made a mistake as to the time when. Stocks sold on the Exchange to-day are deliverable to-morrow, unless there is a special agreement to the contrary. The large buyers of Northern Pacific, those who were buying to prevent the Burlington deal, wanted the stock itself, and not a mere difference between the quotations of to-day and yesterday. The sellers did not have it. So the price for immediate delivery soared to $1,000 per share, many people were ruined, and one of the worst panics on the Stock Exchange that the present generation has witnessed was precipitated. The name of the speculators involved is legion. They are found in all parts of the country, and in all walks of life. They are men and women who have been tempted to gamble by the spectacle of the great advance in stocks which has attended the rise and progress of the "community of interest" idea in railroad management, and the consolidation of competing industries generally.

The community of interest that was to produce such harmony in the industrial and financial world has led to a battle of giants. The field is strewn with dead and wounded, and the question involuntarily arises:

> "Can such things be,
> And overcome us like a summer cloud,
> Without our special wonder?"

The country, prosperous though it be, is full of discontent with the arrogance of men who control millions, and who combine to-day and fight to-morrow, regardless of the rights and interests of the masses. There is a substratum of socialism in every community, which demands municipal ownership of "public utilities." It wants street railroads and gas and electric-lighting works and telephones to be owned by the cities, and administered in the interest of the consumer. It will very likely want country trolley lines to be owned by the State and operated in competition with the steam railroads. It may demand the taking of coal and iron mines and oil wells under the law of eminent domain. It may impose killing taxes on what it conceives to be dangerous monopolies. It may meet the "community of interest" idea of railroad management with more stringent legislation by Congress and the Legislatures than any we have yet had. It is only a rumbling force now, but it is capable of doing vast mischief, both to itself and to those whom it conceives to be inimical to it. Nothing is better calculated to awaken this slumbering giant than such spectacles as we have had in Wall Street the past few days.

WALL STREET AND ITS "CORNER."

The recent "corner" in Northern Pacific appears to have come about without any design on the part of the men who actually caused it. It was not their intention to put the sellers of the stock in a position where they could not deliver it. On the contrary, they were much disappointed when they found that the stock was cornered. They were seeking control of the road, not a profit in a stock gamble. Other operators took advantage of it, but even these men did not produce the corner. They "sized up" the situation to their own profit, but the same result would have come a little later even if they had not existed. So there is no room for legal proceedings to test the validity of contracts made in such a market. The general rule of law in regard to corners is that if a combination has been formed with the object of inducing others to "sell short," and compelling them to buy in the property at a price fixed by the combination, the transaction is fraudulent; and, since fraud vitiates everything, the contract is void. It has been held by the courts also that the act of cornering the market for wheat or other necessaries of life, even where there is no particular intention to induce the selling of the commodity by persons who must buy it of the corners, is against public policy, and that contracts made in pursuance of that aim are illegal. No stock exchange, so far as we are aware, makes a distinction between sales in a cornered market and sales of the ordinary kind. The London Exchange, however, authorizes the annulment of bargains in cases of "fraud or wilful misrepresentation." The penalty for "obvious fraud" in the New York Exchange is the expulsion of the guilty member and the escheat of his membership to the Exchange.

It was to be expected that an incident such as the Northern Pacific corner, in which speculators who had sold what they did not own were suddenly confronted with bankruptcy, should have revived the familiar moralizing over the

evils of "bear" speculation. The truth is, the "bear" on stocks enjoys little favor in the public mind—largely because depression of markets is itself unpopular, but partly also because the nature of the "bear" operation is, in the public's view, mysterious, and hence suspicious. Yet, when the whole framework of speculation is analyzed, there is something to say in behalf of the unbefriended "bear." It is monstrous, say the newspaper critics, who, for one reason or another, are usually "bulls," that a speculator should sell stocks which he does not own. If he pledges future delivery under such conditions, he is justly served when he finds, on settlement-day, that the stocks cannot be obtained. No reasoning could be more sound. But we observe a singular lack, among the same moralists, of denunciation of speculators who buy stocks which they cannot pay for, and who are occasionally punished by being caught in a market where they cannot raise the money.

The comparative immorality of the two transactions we shall leave to doctors in ethics. As regards the mischief done to the outside public by one or the other operation, we think that honors are fairly easy; for if the professional "bear" on occasion undermines credit and tempts the public to sell its stocks for less than value, it is notoriously the work of the professional "bull" to tempt the public to buy worthless properties, or to buy at fictitious prices. This aspect of the matter, however, is not the most important. Unscrupulous as the "bear" operator often is, recklessly as he uses his opportunities, and unpleasant as is the work in which he engages, it none the less remains true that, with Stock Exchange speculation what it is to-day, the active presence of the "bear" is requisite to safety. Speculators for the rise, using borrowed money, will always exist. If the outside public runs madly at their heels, and if, as occurred in the recent market, larger capitalists do not dare to part with their own stock purchases, there is no strong interest left to restrain extravagant excesses except the "bear" operator. Nor is this all. Selling as he does for the purpose of buying in at lower prices, the "bear" not only is a powerful restraint on factitious rise in values, but is the strongest kind of safeguard when the advance, as is usual, culminates in a wild collapse. All students of financial history know that the appalling heights to which prices rose, in the French and English speculation of 1720, were due to the fact that, while "bull operations" on borrowed money were in enormous favor, there was no "bear selling" to offset them. Nor, by consequence, was there any "bear buying" to sustain the market when the inevitable crash arrived. The result was the bankruptcy of two communities.

It is a rather curious fact that, in the business community, a corner in stocks is looked upon usually as more disreputable than a corner in commodities. Speculators who forestall a necessary of life, as Hutchinson twice did in our times on the American wheat market, as young Leiter attempted unsuccessfully to do in 1898, and as another aspiring operator now asserts his ability to do in the corn market at Chicago, come in for a round share of popular abuse, which is very properly bestowed; but they hardly suffer the personal odium among their associates which is apt to attend a corner manipulator on the Stock Exchange. We imagine that this difference in view arises largely from the methods employed in the two cases. In the case of a corner in commodities, the speculator is, as a rule, merely a very successful gambler on production and consumption. A corner in stocks, on the other hand, has too often been tainted with knavery.

Measured by the actual wrong done by the one sort of corner and the other, the balance of ill-repute should doubtless be meted out to the operator in commodities. Stocks, to begin with, are not necessaries. Nothing compels any man to contract for the sale of securities which he does not own. But with commodities some one must do this. Trade, as at present constituted, is largely and necessarily made up of contracts of this sort. Neither the spinner, nor the miller, nor the manufacturer can safely map out his business for the year until somebody in touch with the markets has contracted to deliver to him, at a future date, certain quantities of cotton or grain or iron which are not yet produced. In the stock market this is not true, or at least is true to a very limited extent. Recent events have shown that sales by a foreign security-holder on this market involve the borrowing of the stock by his New York agent for delivery, until the European stock arrives by steamer. This is a perfectly legitimate operation; it is, indeed, the only way in which instant sales from one market to another can be made. But such transactions are small compared with sales of stock which the seller does not own, and which he expects to acquire at lower prices. Not very much sympathy, we presume, will be tendered to him in a cornered market.

The gravest objection to a corner in securities, aside from any disreputable practices incidental to it, is the disturbance which it causes in the entire situation. Itself an abnormal element in the markets, it dislocates with the utmost violence the rest of the financial system. A commercial panic always places the credit and solvency of a part of the community at the mercy of accident; a corner places it in the hands of an individual, and usually of an unscrupulous individual. In a large degree, such a person has the financial situation in his control. He may, as the ingenious Mr. Jay Gould once did, invite the unhappy "shorts" to his office, and inform them, after the fashion of kindly freebooters in the days of more open plunder, that he would only ask for a sight of their cash accounts, in order to assess the ransom according to their means. He may drive them into actual bankruptcy, with the consequent shaking of affiliated houses. But this he will hardly do, for the obvious reason that a bankrupt will not pay the penalty, and that the courts to which he appeals will look much askance at contracts held by manipulators of a corner.

We are not sure that the results of last week's corner, mischievous as they have been in some regards, may not be salutary in their influence on the public. Something was needed to check the stock-jobbing mania, which was taking possession of the entire community, and it is quite as well, perhaps, that the check should be administered by open evidence that many prevailing values were factitious, and that Stock Exchange sharp practice was a powerful factor in the "boom." The recent wreck of prices is correctly described in Wall Street as the most violent sustained by the stock market since the "Venezuela panic" of December 20, 1895. It is fortunate for the financial situation generally that underlying conditions are not what they were in that unlucky week; that the currency is sound, the nation's wealth vastly increased, and the industrial position wholly in our favor.

BOUNTIES AND SUBSIDIES.

Mr. Charles M. Schwab, President of the United States Steel Company, gave testimony before the Industrial Commission at Washington on Saturday in a spirit of frankness which is much to be commended. He also approved himself a man of engaging personality and sense of humor. There were some things connected with his company that he declined to talk about, and some things that he professed to be ignorant of, but he made a favorable impression as a witness, whatever opinions may be held concerning the corporation over which he presides. Before his elevation to the conspicuous place which he now holds, he had been, next to Mr. Carnegie, the head of the Carnegie Steel Company. He began as a laborer in that great establishment, and rose to his present position by force of genius as a steel manufacturer; he is still a young man.

Asked by Professor Jenks to explain how the United States Steel Company came to be formed, Mr. Schwab (according to the newspaper reports of his testimony) said:

"That is a private matter, and I am not authorized to speak about it here. Still, I shall ask about this when I have time, after I return to my office in New York, and

if there is no objection to my discussing this matter for the edification of the public, I will submit a statement concerning it to the Commission."

This was a very proper answer under the circumstances. In the absence of more direct information, we may advert to facts pertinent to the investigation, which were widely published in the month of February last, when the negotiations for the consolidation of the steel interests were in progress. It was then said, and not denied, that the National Tube Company, a corporation with a capital of $80,000,000, which had been financed by the house of J. P. Morgan & Co., was threatened with competition by the Carnegie Steel Co., which had bought land and laid out a scheme for tube works at Conneaut, O., sufficient to duplicate the production of the Tube Company, and that the movement to absorb the Carnegie Company was thus forced upon Mr. Morgan against his wishes. If the Tube Company was to be preserved on the basis of its existing capitalization, the interference of the Carnegie Company must be neutralized. This could be done only by buying out Mr. Carnegie. In order to buy him out, a satisfactory form of security must be produced, or a sum of money must be advanced so gigantic in amount that only the strongest Governments could think of raising it. The only way to create security for $250,000,000 was to combine all the steel interests, and since all of them were exposed equally with the Tube Company to the possible competition of the Carnegie Company, a strong motive for consolidation existed. These facts were freely commented on by the street and in the press at the time. We presume that, if Mr. Schwab gets permission to enter upon this line of narrative, the main facts will turn out to be such as we have indicated.

More important, however, is Mr. Schwab's statement of the present position and prospects of his company. He considers it not over-capitalized. On the contrary, he thinks that the assets have been undervalued. The company owns iron-ore beds that will yield five hundred million tons. These are 80 per cent. of the ore deposits in the Northwestern field, and at the present rate of consumption they will be exhausted in sixty years. It owns sixty thousand acres of coking coal, all there is in the Connellsville district, and this will be exhausted in thirty years. He might have added that this will be an unhappy world when that time comes. These assets, in Mr. Schwab's opinion, are placed at a low valuation in the inventory.

The frankness of Mr. Schwab's testimony comes out most strikingly in his discussion of the tariff question and ship subsidies. He acknowledges that American manufacturers of iron and steel sell at lower prices to foreigners than to consumers at home, but says that they do so in order to keep their men employed in dull times. There is no need, in his opinion, of a tariff on those classes of steel and iron manufactures in which the cost of labor is not a heavy item, such as billets and rails; but in the lighter forms, such as wire, where labor is the heaviest item of production, the present tariff is necessary in order to give labor its adequate reward. All of which, we presume, Mr. Babcock of Wisconsin will roll as a sweet morsel under his tongue.

If Mr. Schwab sells steel to foreigners at less than cost, or at less than he sells in the home market, of course the American public pay the difference. Now the frankest part of his statement is that, if the policy of ship-subsidies were adopted, he could do still more of this kind of business. We labor under a disadvantage now, he says, because it costs more to carry a pound of steel from Pittsburgh to Europe than it does to produce the steel at Pittsburgh. It needs no ghost come from the grave to tell us that, if the American people will pay the freight, we can sell steel to Europe at even lower rates than we do now.

Mr. Schwab has not advanced the Frye Subsidy Bill much, we think, by his explanations of the steel situation at home and abroad, but this is only in line with the course of recent events. On top of the purchase of the Leyland Steamship Line, comes the official announcement of the formation of a Shipyard Trust. Yet Senator Frye was reported only week before last as being busily engaged in "remodelling" the Ship-Subsidy Bill! Poor man, he will have a hard time of it. No sooner does he get his bill modelled so as to prevent a monopoly on the water from taking advantage of it, than a monopoly on land suddenly appears to fright him. If both those who go down to the sea in ships and those who build them are to make a great display of wealth and prosperity, and, above all, organize themselves into Trusts, how can the beggars' appeal be again made to the national Treasury?

The truth is, that the shipping interests are doing precisely what the opponents of last winter's Subsidy Bill said they would do. How loudly Hanna and Grosvenor sniffed at the notion that the shipyards would combine. Impossible! Why, they are too widely scattered, too unlike, do kinds of work too different ever to have a community of interest. But here is the official prospectus of the Trust pointing out these supposed objections as the real arguments for combining, since "each concern will build that for which it is best fitted and equipped, or that which its character, location, and labor can accomplish most economically." The Trust takes in the principal ship-building plants of both the Atlantic and Pacific Coasts, with the exception of the Cramps, who are, however, again reported as on the point of concluding a sort of international Trust in connection with the Vickers-Maxim Company of England. And these constituent corporations, whose agents have repeatedly told Congress that they must have a subsidy or perish, now invite the public to subscribe to their stock on the basis of declared profits of more than 10 per cent. on orders already on hand!

In every rational mind, this must mark the end of the ship-subsidy agitation. Those who took part in it honestly will blush at the way they were duped; those who were not duped, but would be dupers, will see that the game is up. It looks, in fact, as if it was only a kind of heroic self-restraint which prevented the shipping interests from making a business combination six months ago. The thing was in the air then. Both its solid advantages and its speculative opportunities were clearly present to the minds of the capitalists concerned. But the chance of getting a share of that $9,000,000 a year subsidy induced them to wait. One can imagine what a tempting bait in a Trust prospectus would be a twenty-years' contract with the Government. But the companies can wait no longer. A subsidy seems now too remote and uncertain a joy to be preferred to a present and assured happiness. So the rôle of Lazarus begging for subsidy crumbs is dropped for that of Dives with $65,000,000 capital stock, to $40,000,000 of which the public is invited to subscribe at par.

QUESTIONS ABOUT CUBA.

Promptly on his return to Havana, Gen. Wood announced his purpose to do everything in his power to secure a reduction of our tariff on Cuban sugar and tobacco. To the editor of the *Diario de la Marina*, for example, he said, and authorized the publication of his utterances, that he considered it his principal mission in the future to secure such customs favors for Cuban planters, and that, from now on, he would exert every effort to convince the American Government that it was both expedient and necessary to lower the rates on sugar and tobacco imported from Cuba. The *Diario* is an established Spanish newspaper, and especially represents the business elements of the island. Its editor was delighted with Gen. Wood's frank talk, and declared that it would go far towards solving the political questions now agitating Cuba.

But will it? Is there any likelihood that Columbus Wood will balance the egg in the easy fashion proposed? Even if he "convinces" the Administration, and if the President keeps his promise to the Cubans and advises Congress to accept a reciprocity treaty with Cuba, will the obstinate old protectionist horse

consent to drink when thus wheedled down to the water? We think it very doubtful. So must any one who takes a look at the formidable forces arrayed against the optimistic Wood. On his side, to be sure, he has a large exporting interest in this country. The manufacturers of boots and shoes and iron and steel and cotton and machinery and agricultural implements, as well as the exporters of flour and provisions, would be glad to have absolute free trade with Cuba. A large measure of reciprocity they would support heartily. But who would be bitterly against it? The beet-sugar manufacturers, with more than $20,000,000 already invested in their business; the cane-sugar growers, who regard the tariff on sugar as expressly designed for their protection against Cuba; above all, the embattled tobacco-farmers of Connecticut. The latter furious warriors succeeded in frightening the President out of his "plain duty" to let in Porto Rican tobacco free, and declared at the time that with them it was a case of *obsta principiis*. They did not so much mind the competition of Porto Rican tobacco, but they wanted no precedent set to plague them hereafter in the matter of Cuban tobacco. And they will know the reason why before they consent to see the Connecticut Valley made desolate by importations from the Vuelta Abajo.

We conclude, therefore, that the most Gen. Wood can accomplish will be to give a fresh twist to that tariff sword which is already plunged into the vitals of the Republican party. Between its two powerful and antagonistic factions a fierce struggle for supremacy is clearly coming. The interests which have been protected, but have confessedly outgrown the possibility of benefit from protection, are clamorous for a modification of those tariff laws which now prevent the extension of American trade. But the sugar and tobacco Republicans look upon all that with loathing. Those utterly selfish manufacturers, to wish to rob the unselfish sugar-grower and tobacco-farmer of his sole protection against a designing world! Evidently, in all this Cuba is but a minor incident, a pawn on the chess-board. She may precipitate an irrepressible conflict within the Republican party, but she will not be the chief object of interest to the combatants.

Another curious and two-faced question about Cuba is involved in an assurance given to the visiting Cubans by Secretary Root. According to their report to the Convention in Havana, he told them that the Platt amendment would not prevent a Cuban Government from sending diplomatic representatives to other countries. If this was intended as anything more than a hint that there would be just so many more offices to be filled by "good" Cubans, it would be necessary to inquire what would be involved in diplomatic relations between Cuba and any foreign Power. The matter is always reciprocal. Cuban ministers to Europe would not be received unless Europeans thought it worth while to send ministers to Cuba. But would they? What would be gained? Could Cuba, under the Platt amendment, make a treaty with Spain or France? Not unless the United States assented. Could she float a loan in London? Not without American consent. Would it be Cuba to whom foreign nations would look for protection to the lives and property of their citizens resident in the island? No, under the Platt amendment, it would be the United States. Then is it not plain to you, my children, that other countries would laugh at the idea of establishing diplomatic relations with Cuba when all the real business was to be transacted at Washington?

We cannot, indeed, listen to all the solemn absurdities talked by both Cuban and American officials, without asking the question of Don Basil in the "Barber of Seville": "Qui trompe-t-on ici?" Who is the deceiver and who is the dupe? As a matter of fact, we do not suppose that either party is greatly deceived. The Cubans expect annexation. They know that any nominal independence they may be given for a time will be only a toy for them to play with until Nurse Hanna gets ready to take it away. In Washington the real expectation is that Cuba will be annexed. Not just yet. Let us first have the decision of the Supreme Court. Let us wait until enough Cuban plantations are bought up by Americans to make it really our "own" sugar and tobacco which we admit duty-free. But of ultimate annexation, when the Cuban pineapple is ripe for picking, we suppose no officer of the Government, from the President down, has the slightest doubt. Then why do they talk such grave nonsense about the Platt amendment being the bulwark of Cuban independence?

SCHOLARSHIP "IN A GREAT REPUBLIC"—AND ELSEWHERE.

In his argument on April 30 before the Boston Home Market Club in favor of Harvard's bestowing an honorary degree on President McKinley, Senator Hoar might have based his plea on the theory that eminence of any kind should be regarded as a sufficient qualification for such a distinction, and proceeded to show, as, of course, he would have had no difficulty in doing, that President McKinley would meet this requirement. He took, however, the indefensible course of accepting the position that the honor should be reserved for scholars, and then twisting the word "scholar" out of all recognition in the attempt to make it fit the particular instance in which he is interested. His plea is reported as follows:

"I see that some worthy gentlemen, some highly excited gentlemen, just now are denying to President McKinley the right to the title of scholar. Perhaps I do not know exactly what makes a scholar William McKinley, before he was President, stated to the American people, with a beauty and precision not equalled in that discussion since the time of Hamilton, the great argument for the doctrine of the great economic school which Hamilton founded. He conducted that debate, not before a shouting rabble, not before angry and bitter zealots, but before the business men of America, eager to promote the interest of American trade and manufactures, and before the skilled workmen of America, eager to increase their day's wages. And he convinced the court he addressed. If he were right, so much the sounder his judgment. If he were wrong, the greater his power as an orator and an advocate.

"When was it heard before that statesmanship and oratory were not the qualities of scholarship in a great republic? I suppose these gentlemen would deny the title of scholar to Demosthenes, and give it only to some pedant who discovered that Demosthenes once put the accent on the wrong syllable. I suppose they would deny the title of scholar to Chatham, because of his great orations, matchless in the history of civil liberty, and assign it to him because he read Thucydides in the original. I suppose they would have denied the title of scholar to Cæsar and Gen. Grant, if Cæsar had died before he wrote his Commentaries, or Grant before he completed his Memoirs. I suppose they would have denied the honors of scholarship to Patrick Henry, while they would bestow them on some professor of elocution who teaches the stammering schoolboy to repeat his periods."

Now if we seek an interpretation of "scholarship" that will be generally accepted, irrespective of national limitations, we discover that popular usage sets the qualifications of scholarship higher or lower according to the stage of cultivation reached by the person speaking. For instance, an old lady in one of the poorest districts of a large city once said, in our hearing, "I'm not much of a scholar: I can read, but I can't write." Here we touch a stratum in which the possession of even an elementary education is a distinction. At another time we heard a young man, a clerk in a dry-goods store, described as "quite a scholar" on the ground that he could write shorthand. This is a stage higher; the ability to read and to write longhand being regarded as a common acquisition, and an extra of any quality being accepted as a mark of scholarship. So we might trace the progress of the word, from level to level, up to the narrowly specialized signification which is attached to it by classical students. Learning alone, however wide and deep, is not a sufficient passport to this inner circle. George Grote, for example, though one of the greatest historians of ancient Greece, would not be called a Greek scholar. There is nothing necessarily snobbish in this limitation. It implies no depreciation of the genius or the erudition of those to whom the name is denied: it is simply the specialization of a common word into a technical term, for convenience' sake, among a certain section of the academic world.

In spite of this elasticity in meaning, there need be no great difficulty in agreeing upon a working definition. If it is said that no one but a scholar should be admitted to the honorary degrees of a university, the word will be understood by the majority of educated men in the sense given to it by the Century Dictionary: "A learned man; one having great knowledge of literature or philology;

an erudite person; specifically, a man or woman of letters." This is surely as liberal a meaning as can be desired. Now, what would Senator Hoar substitute for this established conception? In the first of the two paragraphs quoted from his speech, he vindicates his use of the word on the ground that the eminent man for whom he claims it was brilliantly successful in conducting a great economic argument before the majority—a majority which was at the same time the most intelligent section—of a whole nation. "He convinced the court he addressed"; therein did he satisfy the crowning test. The question whether his argument was a sound one or not does not affect his title to scholarship; except that, perhaps, the presumption is all the more in his favor if it was unsound. "If he were wrong, the greater his power as an orator and an advocate." For it is this "power as an orator and an advocate," according to Senator Hoar, that is the essential thing. He proceeds to emphasize this truth and scatter all objectors by asking, "When was it heard before that statesmanship and oratory were not the qualities of scholarship?"—we omit "in a great republic," as this waving of the Stars and Stripes does not really affect the question in the least. The only possible answer is the brief and simple one, "Always." Statesmanship and oratory have been recognized in every generation, in the history of civilized peoples at least, as deserving respect and admiration, but previously to this banquet of the Home Market Club they have never been regarded as "the qualities of scholarship."

The citation of Demosthenes, Chatham, Cæsar, General Grant, and Patrick Henry as types of the statesman-orator-scholar, ancient and modern, is helpful as still further elucidating Senator Hoar's opinion, but can hardly be said to strengthen his position. It is surprising that among Greek orators and advocates he should light particularly upon Demosthenes. One would have thought that Cleon would have better suited his turn. If skill in addressing arguments to the majority of one's fellow-citizens, and success in influencing their political action, carry a man far up the ladder of scholarship, Cleon's seat must certainly be near the top. As far as Chatham is concerned, it is obvious that his study of literature made him a scholar, and that his scholarship, together with the mental discipline acquired in the process of gaining it, gave a higher and more abiding value to his speeches than they would otherwise have possessed. Cæsar, one of the finest examples of an all-round genius that any country ever produced, would not have left us without evidence of his scholarship if he had never published the dispatches of his campaigns against the Helvetii and the Nervii; but he certainly did not owe his reputation in that respect to his successes either in the field or in the forum.

The simple fact is, that a statesman and orator may or may not be a scholar, just as a railroad president, or a cotton-manufacturer, or a popular preacher may or may not be a scholar. A man cannot control the political forces of his country or sway the emotions and convictions of large audiences without possessing exceptional gifts; but there is no necessary connection between these and the qualities which, according to the best usage, are known as scholarly. No one would hesitate, for example, to allow to Gladstone the three-fold title of statesman, orator, and scholar; but his claim to scholarship would have been equally recognized if he had never entered Parliament or addressed a public meeting. An interesting comparison is suggested by the career of two eminent men who have represented Birmingham in the House of Commons. Although the oratory of John Bright was undoubtedly of a nobler type than the eloquence of Joseph Chamberlain, the latter has certainly shown the more brilliant qualities as a debater, and has had the greater influence both upon the course of legislation in the United Kingdom and upon the history of the whole British Empire. But if the speech given by John Bright at the opening of the Birmingham Free Library, in 1882, is set by the side of that in which Joseph Chamberlain recently expounded the ideals of the new university in the same city, no reader can be unconscious of a remarkable difference in the level of thought and culture. Neither of these eminent men went through an academic course, but it is manifest that the elder possessed a far greater share than the younger of the tone and temper of the true scholar.

"But why be so pedantically particular," some one will ask, "about the mere use of a word? If a speaker pleases to employ a term in a novel sense, what reason is there for objecting, at any rate as long as he tells you himself what meaning he attaches to it? After all, a word is only a kind of algebraic symbol, and may be made to signify anything that public opinion desires." The mischief is, however, that when an attempt is made to put a new meaning upon a familiar word, it is always proposed, consciously or unconsciously, to retain for it whatever honorable implications and associations may have grown up with the old meaning. And there is a further reason still why Senator Hoar's attempted transformation of the idea of scholarship should not be suffered to pass unchallenged. It illustrates a tendency which is scarcely less dangerous than indifference to the sanctity of language. This tendency is particularly indicated in a later sentence of the same speech, a sentence which, in the hands of hostile critics, might easily be made the text for a scathing arraignment of American ideals: "Fellow-citizens, it is the bee that fills the hive with honey that deserves the degree of A.B., and not the drone, who does nothing but eat and buzz, which tries to sting but cannot even sting." That such a sentiment was received with applause in Boston is an incident that might well exhilarate any malicious person who wished to prove that the life of this country was hopelessly materialistic. It is impossible to extract any meaning from this sentence unless it be taken to express the opinion that the meditation of the student and philosopher is idle and unserviceable, and that the only man who is profitable to the community is he who is visibly increasing such national resources as can be quoted on the Stock Exchange; indeed, that the latter not only deserves the highest honor as a citizen, but is the most fitting to receive that academic recognition which is universally interpreted as an evidence of education and culture. It was only to be expected, after the reported professorial eulogy of Rockefeller as Shakspere's superior, that some day or other we should come to this; but it is nevertheless surprising that the new standard should have gained so easy a conquest over the traditions of Boston.

GIOSUÈ CARDUCCI.

FLORENCE, April 21, 1901.

A delightful little volume, 'Reminiscences and Critical Essays,' by Giuseppe Chiarini, Carducci's early friend and fellow-student, now one of the permanent heads of public instruction in Italy, well known for his prose writings and poems—one of the few Italians who have thoroughly studied and appreciated English literature and English poets (the only living Italian, now that Nencioni is gone, of whom this can be said)—is published at Bologna for the students' commemoration of the beloved master's fortieth anniversary as teacher and professor. The 370 pages contain a preface, a review of the "Levia Gravia," chapters on Italian critics and the first "Odi Barbare," on the poems that mark the transition from the first to the second, on the third "Odi Barbare," and finally some eighty pages devoted to Giosuè himself—the man, the friend, the citizen, and the teacher of youth. The space that we can claim is all too small for even the choicest bits of this fascinating biography, which illuminates the meagre details that the poet was compelled by one of his publishers to furnish some years since.

"The generation to which Carducci and I belong was a fortunate one because it saw accomplished in brief space of time events that surpassed all hope. As boys, we dreamed always of a revolution and of a republic, but knew that they were dreams. . . . When Carducci, at twenty, first apostrophised the Italians as a race unworthy of their country and their forefathers, bidding them put off their boasting and fool's pride which made them the laughing-stock of the world, we applauded; but none of us dreamed that those verses were the prelude to the song of 'Italia che va in Campidoglio.' . . . The events of '48 and '49 served us, boys of thirteen and fourteen, as a practical course in love of country and in hatred for the foreigner. There lived in our hearts and memories the march through our midst of the gallant youths who volunteered as combatants for the independence of Italy, and in our ears echoed the battle-cries of Milan, of Brescia, of Venice, and of Rome. Then followed the rattle of the Austrian swords on the pavement of the Piazza of the Signoria, and the hopes of a fresh crusade seemed so vague and far off that our patriotism took refuge in literature!"

This confession is precious, as justifying Mazzini's reproach to the youth of those days, who could not or would not read the signs of the times, and see that '48 and '49, with all their faults and failures, had taught the people, who hitherto had held aloof from plots and revolutions, that they had a country to live and die for; that by fighting one and all, and all for each, they were strong enough to win. But for his teaching and acting, and the enormous power of his influence on a band of the elect and on the whole of the people, these robust intellects of feeble Tuscany, whose "holy fathers" were Dante, Petrarch, Alfieri, Foscolo, and Leopardi, might have gone on adoring their writings, invoking in their names the great fatherland of the future, a strong and glorious Italy, which should have all the virtue and none of the vices of the past; but they would never have attained or led up to even this prosaic, idealless, but *one* Italy of to-day. Their

attitude, nevertheless, has had its influence on Italian literature from '49 to '70, and, in a modified sense, up to the present times.

"Our patriotism was so exclusive and so unilluminated that our hatred for the foreigner was extended to all foreign literature. Our love of country and of the Italian tongue was one and the same thing; who wrote with a foreign intonation or in careless style could not be a good Italian. And, as Romanticism was a foreign doctrine, and, in our opinion, an irreverence to our classical writers, we passed an *à priori* sentence on all romantic writings, as on an intellectual servitude, and, to simplify matters, dubbed all the writers who displeased us as 'Romanticists.' One only, then (now, alas! no longer with us), Nencioni, dissented, loved and read foreign literature, preferred the Romanticists to the Classicists, set the dramas of Schiller and of Goethe above the tragedies of Alfieri; admired Shakspere as much as Dante, Lamartine and Hugo even as Foscolo and Leopardi, and (it goes without saying), was a devout Manzonian."

Chiarini repeats what we already know of the poet's early life; of his father, who, though a Liberal and conspirator in '31, made him learn by heart Manzoni's 'Morale Cattolica' as a punishment, while his mother taught him to delight in Alfieri and to recite Berchet's poems. At school, he was, though undisciplined and fitful, a general favorite; his professors thought much of him, his companions adored him, even though at times, when they bored him, he was fierce. Poorer than we believed, the purchase even of a second-hand book was difficult for him. Once he became possessed of Foscolo's work. He went up-stairs "with it, on his knees, till he found his mother and made her kneel and kiss the book. Next morning, when Gargani came to fetch him, he had not finished dressing, but was declaiming 'I Sepolcri' to the delight of Gargani listening at the door. In 1853 he went to the Normal School at Pisa, from which he passed as master of rhetoric to the Ginnasio of San Miniato-al-tedesco. His father, who, to the last, remained a parish doctor, was at Pian Castagnaio when the cholera broke out in a frightful manner." Giosuè, who was there for his vacation, volunteered as nurse, and wrote to Chiarini:

"As to what you say about literary work, for the last fortnight I have abandoned it, being occupied in nursing the cholera patients, who are numerous here. As, either from fear or incapacity, proper nurses could not be found, my brother Dante and myself, with two young Sienese, volunteered, whereupon the municipality formed us with three others into a committee, putting me at the head, with instructions to compile regulations for other committees of vigilance on food, cleanliness, aid to the indigent, disinfection, burial, etc. So I, as is the duty of every good citizen, have exchanged a meditative for an active life, which, as our good Leopardi teaches, is worthier and more natural to a man than the former. So I mean to do whenever the public good demands, as hitherto I have led a meditative life because the conditions of our unhappy country have precluded an active one."

From this it appears that, even up to 1856, Carducci and his friends had taken no part in conspiracies or attempts at insurrection, which were rife all over Italy, in that year especially. To a friend who thought of going to the Normal Institute at Pisa, he wrote, dissuading him:

"You will find a chattering professor who will tire you with his citations and his dates, copied from all sorts of books which he never names. Then, with a grand air, he will tell you, without any explanations or reasoning, things which children of the second elementary schools know—things cooked and recooked by all writers on rhetoric, by all academicians in all the academies of all time. Thus you will pass three years in studying Latin literature and lose your days in learning mere dates. As for Greek literature, you will have two professors who know Greek and pass their time in heated, angry dissertations on the functions of the aorist; you will hear emphatic declamation on the genealogy of the verbs and tenses as if it were the genealogy of the Æacidæ; but of the philosophy of the divine literature of Greece, of Athens's golden age, of the causes that inspired these divine works, of the method and system of the poetry, of a comparison between Greek and Latin and Italian, nothing, nothing, nothing, because these teachers are born to decline verbs, not to think or to feel and to make others feel what is beautiful. Woe to him who dares to think in the Normal School. Of rational and moral philosophy it is useless to speak, but I warn you that you will have a fellow who swears by his master, and who, without having ever read even a translation from the Greek, will begin by abusing Greek literature and praising the Goths to the skies. You will feel an irresistible desire to murder him and run the risk of the galleys."

Just as he had settled himself in a tiny attic in Florence, working at anything that came to hand for daily bread and publishing his first 'Rime,' he was summoned home by the sudden death of his best beloved brother Dante. His father never recovered from the shock, and died ten months afterwards, leaving his mother, a younger brother, and his cousin and future wife entirely dependent on his exertions; two lire only being left in the house. "How we lived," he wrote thirty years afterwards, "I can't now tell, but the impression remains that one can exist on next to nothing."

The year of his political awakening was 1859. Victor Emanuel's speech on opening the Chambers in January sounded the war cry, and Carducci's first political poem was addressed to the King. Alas, with that helpless family on his hands, he could not volunteer, join either Garibaldi or the regular army; and when he counts up his life's trials, he puts that second. The greatest of all (and that accounts for much) was the loss of his one boy, Dante Bruto Augusto. He had married in 1866. His mother, to whom he was devoted, died in February, 1870, and in November of the same year this "wonderful child," just three years and seven months old. His description of the sudden, unlooked-for death is too painful for translation.

"So I lost him," he writes to Chiarini. "He was beautful, hale, and a real miracle for his age. Then he was so strong and good and so loving. How he loved his mother, and, oh! the things he used to say to her. He used to recite *Salute o Satanna, O ribellione*, with all his clear voice, striking the table with his little hand, the floor with his foot. And round that child I had wound all my joys and hopes for the future; all that was worthy in my soul I had concentrated on that tiny head. When he appeared, it seemed as though the sun had risen on my soul; when I placed my hand on his head, I forgot all sad things, evil and hate disappeared, I felt my heart grow larger, I felt good. Poor my child and poorer me! how sad must be the rest of life—this remainder which I had accustomed myself to consider as all given to him, to be by him consoled and strengthened. It seemed that we were to walk together, I showing him the path, he helpng me along it, until I should go to rest and he continue more securely and less sad. I meant him to grow up strong, free, and modest, and his character promised all this. He would, if I had died, have sustained his mother and sisters; they all would have remembered me and kept my name in honor. And now all that is but a 'has been.' Nothing now is true!"

This fearful loss altered life for the bereaved father, nor was the year calculated to give him peace. He had begun, as we say, an ardent worshipper of the King who fought so gallantly on the Lombard plains; then Garibaldi enthralled him, and the conduct of the Government towards the Liberator disgusted him, his indignation coming to a climax after Aspromonte. So on through all the sixties, especially after Mentana and the unspeakable servility of the Government to France. All the old traditions of republican grandeur and liberty returned to take possession of the poet's soul. The wretched entry into Rome by the breach in Porta Pia was too prosaic for his ideal. "The Italian Government," he wrote, "goes up the triumphal path as if it were the holy staircase, on its knees, with a rope round its neck, making crosses with its arms to right and to left, and crying for pardon. *I cannot help it, I cannot help it! They force me forward by kicking me from behind!* Oh what an entry into Rome!"

He had been appointed to the chair of Italian literature in Bologna by Mamiani just after Cavour's death, and had thrown his whole soul into his work.

"Few," writes Chiarini, "have had such a lofty ideal of a teacher's mission as Carducci—lofty in the sense of duty. No one brings to the task of literature more rigid and scrupulous ideas of rectitude and morality. This is why he is so inexorable towards charlatans and impostors. The teacher and the writer, he maintains, are bound to know thoroughly the matter of which they speak or write. A literary man is a worker just as is a mason, a carpenter, any artisan whatsoever. If an artisan tries to cheat by palming off bad work, he is held to be dishonest and loses all credit. Why should not the same terms and treatment be applied to a professor who pretends to teach what he does not know, to a writer who, trusting to the ignorance of his readers, palms off on them, as his own, work and doctrines which do not belong to him? Indignant, too, is he with editors who underpay honest literary work. These are the stupid Italian maxims, he says. Here it is held that literary work is not work but contemplation, dreams, ideal nonsense; that the writer is not a worker, but a missionary, a priest, a tribune, or a plaything of the devil, who has in his charge polite literature and Italian civilization."

We canot follow Chiarini's clear defence of Carducci's political evolution; nor is it really important, as he has but returned to his "first love" since the party of action, from which he hoped so much, from the time of their accession to power in 1876 but plunged the nation deeper and deeper down into the slough of despond where yet she is struggling. We must end with Carducci's very characteristic letter to the students, who wished to do him honor in some yet undetermined manner:

"That the students care to remember my forty years of teaching in this university is pleasing to me, even in the fashion of it, which is not to be noisy. The newspapers, letters, even poems threaten me with what to-day is called a jubilee. . . . A jubilee, according to Scripture, signifies a year of perfect quiet, in which the Church promises the remission of sins to those who perform certain acts of penitence. Now am I in a state to perform acts of penitence? I doubt it. Again, according to the Mosaic law, fifty years ought to intervene between one jubilee and another; the Christian law has reduced the years to twenty-five. But only five

years ago my jubilee was celebrated, and to repeat it at such a brief interval would exceed all the powers of indulgences. So, briefly and truthfully, from my heart I thank all, but I find myself in a state of mind and body in which any noise, material or moral, disturbs my quiet; without which there can be no jubilee."

J. W. M.

Correspondence.

ANOTHER LESSON FROM SPAIN.

TO THE EDITOR OF THE NATION:

SIR: A fresh reason for the faith that is in him will be welcomed by any Imperialist, so I advise him to read the following extracts from a cheerful argument made in behalf of the Spanish King Charles V., when that forerunner of President McKinley was active in the work of pacification. The letter was written about 1520 by Martin Fernandez Enciso, a crown officer in the West Indies, a scholar and a soldier of renown. He says in part:

"Puissant Sire: The Bachelor Enciso humbly salutes your Majesty and begs to say: that in the year 1512 . . . the Dominican friars contended in Santo Domingo that Christians could not hold nor own the Indians they had enslaved [the word is *encomendados*, meaning a condition similar to feudal vassalage], and hence must restore all the gold they had gained by means of them. Whereupon the King [Fernando] convoked in Burgos a large council of Dominican and Franciscan theologians, bishops, and other dignitaries who [drew up certain charges and regulations]. . . . And next year, Pedrarias Dávila and I being about to go on an expedition against Darien, the Dominicans again interposed, declaring the King could not order that invasion. In view of which your Highness ordered the friars of San Pablo de Valladolid . . . to study the question, and to give answer on certain points which I would present to them. And on the day set they convened, a large gathering of doctors of divinity, before whom I argued in favor of your Highness's royal rights, citing certain Biblical texts, and spoke to the following effect:

"'Your Grace will remember that the gentiles and idolaters possessed the Promised Land, wherein they sacrificed upon many altars to their idols, blaspheming God; and God gave this land to Abraham and his children. . . . [reciting the history to where Moses died and Joshua succeeded him]. And Joshua sent to demand the submission of Jericho and the surrender of the Promised Land that God had given them. But as they refused, Joshua took the city and slew all its people [save Rahab and her household], and then he took all that land by force of arms, slew unnumbered gentiles, captured many and made them slaves. And all this was done according to the will of God, for all those people were idolaters.'

"Having cited this authority, I showed that the Pope, representing God, had given to the Catholic King [Ferdinand] the lands of the Indies which the idolaters possessed, for him to hold in the name of God and our holy faith; I showed that the King could most righteously demand those lands of the idolatrous Indians, and that, if they refused, could make war against them, take the lands by force, slay the inhabitants or take them for slaves, as Joshua did in the Promised Land.

"And after long argument all the reverend council . . . declared the Pope could give and the King subjugate those lands as I had indicated, could enslave those that resisted, and they who surrendered could be held as vassals, obliged to serve those whom the King sent to hold the territory—all of which is duly recorded in the records at Sevilla."

The letter, which goes on elaborating the argument at great length, concludes with notice of another frivolous objection to a proposed additional annexation of islands, and begs the Emperor to have his confessor read the letter, convoke the council, and send the proper order to the Indies, for the greater glory of God, the aggrandizement of his Imperial Majesty, and the destruction of idolatry (note the anticlimax—or climax, perhaps).

This letter is to be found in 'Documentos Inéditos del Archivo de Indias,' vol. i., p. 441, and should be inserted in the next Army Appropriation Bill, changing "idolatrous," perhaps, to "uncivilized," the "Promised Land" to "outlet for our rapidly growing commerce," etc. H. P. E.

PALO ALTO, CAL., May 7, 1901.

Notes.

Fleming H. Revell Co. will shortly publish 'The Convulsion in China at the End of the Century,' by Dr. Arthur H. Smith.

'Treason and Plot: Struggles for Catholic Supremacy in the Last Years of Queen Elizabeth,' by Martin A. S. Hume, and 'The Great War Trek,' personal South African experiences by James Barnes, will be brought out during the present month by D. Appleton & Co.

Shortly forthcoming from Houghton, Mifflin & Co. is 'Substitutes for Saloons.'

The Neale Publishing Co., Washington, have nearly ready the 'Autobiography of Richard Malcolm Johnston'; four volumes, "In De Miz Series," embracing eighteen negro dialect stories by Mrs. LaSalle Corbell Pickett, widow of Gen. Pickett; 'Dorothy Quincy, Wife of John Hancock, with the Events of her Time,' by Ellen C. D. Q. Woodbury; 'Thirty-six Years in the White House,' by Thomas F. Pendel, the veteran doorkeeper; 'Money-Making Occupations for Women,' by Mrs. Katherine R. Kilbourn; and a Life of Poe, by Col. John A. Joyce.

Four years ago we commended Mr. Frank M. Chapman's 'Bird Life: A Guide to the Study of Our Common Birds' (D. Appleton & Co.), and particularly the designs of Mr. Ernest Seton-Thompson. The publishers have now brought out a new edition with a selection of seventy-five full-page plates, lithographically colored after the original drawings. By those whom the author had in mind to interest and instruct, this will certainly be welcomed as an extra help in the pursuit of bird-lore, while the volume gains decidedly in gayety of appearance. Artistically, however, we should rate the coloring lower than the draughtsmanship.

Prof. L. H. Bailey's illustrated 'Cyclopædia of American Horticulture' (Macmillan) is making commendable progress, and we now have the third volume, N—Q, leaving but one other to appear. The principal articles are, among trees, peach (15 pp.), prunus (14 pp.), pinus (11 pp.), pear (10 pp.), quercus (9 pp.), pomology (8 pp.), orange (8 pp.), and plum (7). Under the last rubric we read that "California analyses have shown the fig to stand highest in nutritive value, the apricot and plum second, and the prune and orange about equal for third place." Orchids have ten pages allotted them, nepenthes eight. The horticultural capacity of the Philippine Islands and of Porto Rico is discussed under their respective headings. Perfumery gardening, hardly beyond the experimental stage, and horticultural photography are other titles. We notice Oakèsia (from William Oakes) as Rhodèsia (from Cecil Rhodes). There are many fine full-page photographic plates of fruit, vegetables, and forest landscape.

In sympathy with the late Col. Ingersoll's crusade against Bible and priestcraft, Mr. Peter Eckler of this city reprints 'Erasmus in Praise of Folly,' a weapon which would generally be thought superseded even if it had, by virtue of an idiomatic translation, become an English classic. The version here reproduced is hopelessly archaic and more or less obscure for present-day readers. Holbein's illustrations are thrown in with as little reason, and are a medley of copies from wood and copper sources, seldom suggesting what merit the original drawings possessed. The book is a curiosity and little more.

Dr. Samuel A. Green, librarian of the Massachusetts Historical Society, has added to his remarkable series of volumes and pamphlets relating to the history of Groton, Mass., one more volume, 'Three Military Diaries Kept by Groton Soldiers in Different Wars.' These diaries are of Lieut. Dudley Bradstreet at the siege of Louisburg, 1745-'46; Sergeant David Holden in the French and Indian War, 1760; and Lieut. Amos Farnsworth in the Revolutionary War, 1775-'79. Each of these diaries has already been printed as a contribution by Dr. Green to the Proceedings of the Massachusetts Historical Society. In bringing them together in a volume, he has added a preface, an appendix, and an excellent index. The diaries are printed *verbatim et literatim* with the many contractions and other peculiarities carefully retained, and nothing could furnish a better picture of the daily life of the camp in those days. Their considerable value as historical documents is enhanced by Dr. Green's numerous intelligent footnotes. Like his other volumes, this work is not published, but a few copies are on sale with George E. Littlefield, No. 67 Cornhill, Boston.

A similarly pertinacious devotee of Lancaster, Mass., Mr. Henry S. Nourse, has issued two pamphlets, 'A Supplement to the Early Records and Military Annals' of that town, and 'A Bibliography of Lancastriana,' both placed on sale at the Town Library. The former contains a map showing Mrs. Rowlandson's "removes" during her brief captivity with the Indians and return. Her famous Narrative (1682) appears to be the very corner-stone of the Bibliography in the narrow sense. No copy of the first edition is known to exist. In all, twenty-nine editions are recorded. Mr. Nourse's own list is voluminous.

Two short and highly condensed studies by Leon H. Vincent discuss the French Academy and Pierre Corneille (Boston: Houghton, Mifflin & Co.). The former admittedly draws its matter from well-known sources, and advances no pretensions beyond those of a popular monograph; it emphasizes the often-alleged causal connection between the influence of the Hôtel de Rambouillet and the foundation of the society of Forty Immortals. In treating of Corneille, the essayist accepts the somewhat conventional view of Richelieu's attack upon "Le Cid," charging the Cardinal with the amateur's traditional jealousy of professional skill, and apparently gliding over the awkward question of the moral issues involved in the suggestions of the plot of the famous drama.

Completeness can never be affirmed of any

collection of Southern negro songs. They are still being modified in a thousand ways, and production can hardly have ceased altogether. The best have, doubtless, been published, and it remains for some musical mind to make an anthology which would insure a wider vogue than the "singers" from the various Southern institutions have secured for any but two or three favorites. The latest collection is from the blackest part of the Black Belt of Alabama, namely, the vicinity of Calhoun, Lowndes County, where the Calhoun Colored School (ironically fateful collocation) has been established for nine years, to the vast moral and material advantage of the population ('Calhoun Plantation Songs.' Boston: C. W. Thompson & Co., 13 West Street). Miss Emily Hallowell has gathered, arranged, and harmonized these melodies, all "sperituals," in the Sea Island category, for the benefit of the School. We find among them but a single one, "Wrastling Jacob," that in theme is matched in the comprehensive 'Slave Songs of the United States,' but the music is wholly different. Some wholesome reflections for Christians of all colors are invited by the nature of the words sung with so much fervor and exaltation by these benighted believers.

Every one knows that the most striking feature about children is their remarkable (unhappily, evanescent) charm. This being the case, it is a little singular that books concerning children are for the most part distinguished for their lack of charm. A notable exception to the general rule was Miss Shinn's book of last year. Less striking, but also particularly pleasing, is 'The Child,' by W. B. Drummond, published as one of their attractive "Temple Cyclopædic Primers," by Dent-Macmillan. This little book gives no more than it is indispensable that every mother should know; the information is good and wise, both as regards the physical care of the child and still more its moral and intellectual up-bringing. We learn that in England the kindergarten is regarded as a luxury of the rich; that in America many towns of moderate size have more free kindergartens than the whole of England put together, and that these have been found to be so serviceable that it is merely a question of time when they shall be made a regular part of the public-school system.

F. E. Turneaure and H. L. Russell's 'Public Water Supplies' (John Wiley & Son) has been designed as a text-book for technical schools. It is gratifying to find so painstaking and original a compilation from the latest and best sources. The full list of the literature of each topic, found at the end of the chapter, and the bringing together in compact form of valuable recent data, make the book exceedingly useful to the water-works engineer as well as to the student, even though, as the author modestly suggests, the specialist will find in it little that is new. A comparison of this work with a standard treatise published twenty-three years ago furnishes an index of important lines of development in the science of water-supply. In the earlier volume the subject of quality of water occupies six per cent. of the whole space, and that of works for purification about four per cent., whereas in the present volume these subjects occupy twelve per cent. and fourteen per cent. respectively. The earlier treatise contains scarcely a suggestion of the value of bacteriological studies as a guide to the safety of the supply and the efficacy of purification works, and only a hint of the important agency of the water-supply in spreading typhoid fever and other water-borne diseases—a subject very fully treated in the present work. Nearly every chapter bears the impress of the research and experience of the last quarter-century, which has been a period of remarkable progress in the development and treatment of public water-supply and the extension of water-works. There is a valuable chapter on practical operation and maintenance.

The ninth edition of the first volume of Kiepert's 'Differential- und Integral- Rechnung' (Hanover: Helwing) has just been issued. Although nominally devoted to the differential calculus, it contains much matter on functions, series, curves, and solution of equations which in this country is generally found in books on higher algebra and analytic geometry. These topics are more clearly treated by the use of elementary principles of the calculus, and it would be of great advantage to American students if our text-books should be revised on this German method. The volume contains no problems for solution by the student, but many interesting numerical exercises are worked out in detail, so that on the whole the book is more practical than American texts. Hyperbolic functions, with good tables, are introduced in this edition in view of their increasing use over the older logarithmic functions. A valuable feature is the recapitulation, in thirty pages at the end, of all the important formulas demonstrated in the book.

A special education for commercial life is advocated in the *Technology Review* for April, by Prof. D. R. Dewey of the Massachusetts Institute of Technology. While holding it to be now essential in every department of business, from the office-boy up, he limits his inquiry to what should constitute the training of the youth who is ambitious of becoming one of "the great employers of industry and heads of large firms and business houses." He takes for his text, as it were, the complaint to him by a successful manufacturer and exporter of machinery: "I can hire young men, graduates of engineering schools, to go into the mechanical departments of my business; but I do not know where to turn to find a young man properly trained to come into my office, who, by an appreciation of the problems which I have to face, can relieve me of a portion of responsibility." A tentative introductory curriculum, including the fundamental commercial processes, as accounting, banking, transportation, organization of capital, etc., is laid down, and is followed by suggestions as to advanced studies, with a warning against the error of a too exclusive attention to economic and political studies. Some knowledge of the nature of machinery and the chemistry of industrial products is as essential to success in distributing goods as knowledge of languages and of the world's markets.

The new excavations at the temple of Athene on the island of Aegina, recently begun under the supervision of Professor Furtwängler, have already yielded encouraging results. In a propylon not touched by Von Hallerstein during the excavations in 1811, there were found, among a number of other objects, two heads of Parian marble belonging to figures on the western and eastern Aeginetan pediment groups in the Munich Glyptothek, where, it is to be supposed, they will some day take their rightful places, now occupied by Thorwaldsen's substitutes.

In our last issue, reviewing Books on Painting, we unfortunately dropped a line in the last sentence of the last paragraph but one on page 377. It should read: "The first was *local and temporary; the second was* akin to all good painting," etc.

—*Harper's* for June contains a paper by J. J. Benjamin-Constant, called "My Portraits," with some interesting reproductions of the painter's work. An artist's impressions of his own pictures are always entertaining. He calls his portrait of Queen Victoria an "historical vision"; the present Queen, as a subject, he pronounces "formidable." Of his picture of M. de Blowitz he observes: "I dare to say this: It is one of the best my art has produced"—and indeed the lover of portraits and character must feel so. It is, even in a reproduction, an undeniable portrait. "Note the keen, alert expression of the eyes. . . . Behind them lies a brain that knows how to see and how to relate the history of his times, . . . oftentimes, indeed, for the benefit of statesmen *who gladly permit themselves to be thus informed.*" A good solid article is that on "Hallucinations," by Dr. Andrew Wilson. It embodies a scientific theory of ghost-seeing, which will probably be received coldly by all who like the ghostly better than they do the rational. Dr. Wilson does not in the least doubt that many of the old ghost stories are true, to the extent that the ghost was actually visualized by the person to whom the visitation occurred. What he insists upon is that the brain "can project its memories forward in the form of subjective sensations as readily, in some cases, as it can receive and deal with the objective sensations that it receives from the outer world." As we understand it, he thinks that the retina itself is thus reflectively acted upon from within. What Blake, Luther, and Tasso had that most people have not, was a power "of subjective reproduction of the brain's stored-up concepts." As a typical case of hallucination, Dr. Wilson cites that related by the Rev. Dr. Jessopp in the *Athenæum* of January 10, 1880, in which the ghost seems to have actually been identified as an unconscious reproduction of the figure of Parsons, the Jesuit father whom the seer had previously described in a book of which he was the author, in terms closely corresponding with those in which he afterward described the ghost. At the time of the visitation he was alone, at the dead of night, in an old library, belonging to a Walpole, "and Father Parsons was the leader of Henry Walpole, the hero of his just-cited book." Whether this explanation of the genesis of this particular ghost is correct or not, it must be admitted by all candid minds that the analysis of the facts in the case and the hypothesis suggested are both strictly scientific. "The Go-Away Child," by Frances Aymar Matthews, is a melancholy story of Chinese life. Twenty years ago her Chinamen might have been very "convincing"; one does not feel quite so sure now how much of our old China was real and how much melodrama. At all events, this writer has the power to stir our heart-

strings—not so useless a gift as the writers of some fiction imagine.

—*Scribner's* contains an article by John La Farge on Hawaii, "Passages from a Diary in the Pacific." The illustrations are from sketches by the author, and, even without color, are interesting. In this case the color is in the essay, which is full of carefully written description of effects jotted down, as witnessed, by the hand of a master. Thomas F. Millard has an account of Gen. Christian De Wet, accompanied by what looks like a good portrait. Mr. Millard's writing is superior at one point to most war-correspondents' writing; it is always intelligible. Even his views of the relative military merits of De Wet and Cronje he explains so clearly that the non-expert can follow him. His theory is, that Cronje was an obstinate blunderer, who was caught in a death-trap at Paardeburg when he might, had he taken a hint from De Wet, have saved himself. After Cronje was fairly cornered, De Wet, with a handful of men, withdrawn from the siege of Kimberley, "opened a way for the Boer army to come out, and kept it open for a whole day." By means of the heliograph he urged his superior to abandon his impedimenta and escape; but Cronje insisted that he could get away whenever he wanted to. The next day French's cavalry, coming out of Kimberley, cut De Wet off; the gap was closed, and "was never reopened except for Cronje and the remnant of his army to march out prisoners of war." De Wet's appearance is described as entirely unmilitary. When Mr. Millard met him, there was nothing about him to indicate his rank—neither uniform, nor even coat. But for his rifle and bandolier, "he might easily have passed for a farmer." The concluding paper on "The Southern Mountaineer," by John Fox, jr., gives an account of the border-State blood feud, which throws a strong side light on the practice of lynching. The feuds take us back, Mr. Fox thinks, a hundred years—we should say to mediæval times. Here we have communities in which blood feuds are handed down from father to son until whole families are exterminated, while the original cause of the difficulty has become a myth or is forgotten. The feud is not carried on by any regularized private warfare, like the duel, but by murder, ambush, and hired assassination. Lynching goes hand in hand with those practices, and both testify to the absence of justice and organized police. On the whole, we are inclined to doubt whether some of these communities are not, in many respects, less enlightened and more given to brutality and violence than rural mediæval communities were. It is not very reassuring to be told that the innocent stranger, who has no part or lot in the local quarrel, need not expect to be murdered; for it is quite clear that he stands a good chance of being, any day, shot accidentally in a chance brawl.

—We have already commented on Professor Münsterberg's article in the *Atlantic* on "Productive Scholarship in America." The writer, in the true American spirit of optimism, declares that when America wants a thing, she "has to have it"; ergo, as soon as we set resolutely about it, we shall produce Darwins, and Virchows, and Helmholtzes, and Pasteurs, and Mommsens, and Huxleys in abundance. The doubt persists, however, whether true scholarship can be produced at will. Certainly a community will not be distinguished by scholars which does not itself care much about scholarship; and how much do we love it, as compared with stocks, golf, and football? Time will show. Edmund Gosse contributes an article on Mandell Creighton, Bishop of London, and manages to paint a portrait in which the disagreeable traits are easily recognizable. If the biographic art consists in giving reasons for thinking that the subject was rather a poor creature, Mr. Gosse has it to perfection. When the reader has done, he remembers that some people thought the Bishop of London a worldly-minded man, and others accused him of "flippancy"; and wonders what Mr. Gosse's impression of him really was.

—Baron Pierre de Coubertin contributes to the *Century* an account of Émile Loubet, President of the French Republic, accompanied by a portrait. M. Loubet is one of those statesmen about whom all accounts agree, and consequently the reader will not find much that is new in the article. A safe man, according to every one, his Presidency is not likely to be marked by anything melodramatic. In fact, his action in the Dreyfus case was distinctly anti-melodramatic. Baron de Coubertin describes him as a great reader and a man of "vast experience," who, however, has "not travelled at all." The Baron thinks that his lack of acquaintance with other countries may prove a serious inconvenience; but he is no more handicapped in this way than many of his fellow-rulers. Of all the potentates who at this time divide the government of the world, how many have travelled in such a way as to know other countries? Neither Lord Salisbury, nor Mr. Balfour, nor Mr. McKinley, nor the Emperor of Russia, nor the King of Italy, nor the Sultan of Turkey, nor even the German Emperor has anything but a superficial acquaintance with most of the world outside that part of it over which they preside. Even Croker, who governs us from England, is not really a travelled man, and Lord Randolph Churchill, who was a great traveller, did not succeed as a statesman. In fact, it might be seriously maintained that, from Alfred the Great to Loubet, the experience of travel and that on which statesmen and bosses are nurtured are diverse. Robert T. Hill contributes a "lesson in the government of distant colonies" under the rather fantastic title of "The Broken Necklace." The broken necklace means the Lesser Antilles and the Windward Islands, all colonies, mostly if not entirely managed by distant governments, and all more or less failures. Such colonies, says Mr. Hill, "are never free." Some of the smaller ones "are forgotten," and perish from sheer inattention, and "this is the apparent fate of the Lesser Antilles." "Since our national Government has seen fit to establish for Porto Rico a colonial administration closely resembling that of the adjacent crown colonies," it is called upon to heed the lesson of "injustice and economic strangulation" taught by them. Among the best illustrated articles are three on "Out-of-the-Way Places in the Orient," by Mrs. Lockwood de Forest, Marion M. Pope, and V. Scott O'Connor.

—Certain Jesuit Fathers in the Philippine Archipelago conceived the idea, simultaneously with the close of the Spanish domination, of compiling a comprehensive work on this watery possession, together with a new atlas which had for some months previously been in preparation at the Manila Observatory. At what stage our Government came to the support of this enterprise, we do not know, but the result is two very handsome quarto volumes issuing from the Government Printing-Office at Washington, 'El Archipiélago Filipino,' etc., and accompanying Atlas, in the guise of a supplement to the report of the first American Philippine Commission. The first volume is devoted to a general politico-economic description of the islands, in due order, followed by chapters on ethnography; religious condition, agriculture and industries; chronology of events; mountains; geology; vegetation; zoölogy. The second and smaller volume deals with climate, earthquakes, cyclones, and variation of terrestrial magnetism in Manila, and is abundantly supplied with maps and charts, as the first volume is with valuable illustrations (mostly photographic). The Atlas, finally, a folio, is provided with an index. In this alone the text is English. No one unfamiliar with Spanish can make use of the statistical part—the "colección de datos"—of this work, which is a credit to its authors. They say that the circumstance of the compulsory reunion of all the Jesuit missionaries in Manila during the late "unpleasantness" facilitated the compilation of the survey, and they express their obligation to the United States Government for no less consideration and "subvención" than that extended to the Mission by Spain herself, a foster-mother who, with all her faults, "ha dispensado al país muchísimo bien." These volumes, an indispensable source of the latest information, may be procured of John J. Wynne, S.J., 27 and 29 West Sixteenth Street, New York; the Government having allotted 1,000 copies to Father Algue, director of the Observatory, to be sold for the benefit of that famous institution. The price is twenty dollars.

—There is some embarrassment in noticing a work in nine volumes of three divisions, with the third division unpublished, as is the case with 'Modern Eloquence,' edited by ex-Speaker Reed, with the aid of associates and a committee of selection (Philadelphia: John D. Morris & Co.; New York: University Publishing Co.). Not that the general scheme needs further exemplification, but the last three volumes are to contain indexes with a view to making the work "a topical cyclopædia of oratorical quotations," of practical utility "to public speakers and to all persons called to prepare a lecture, respond to a toast, or deliver an occasional address." The good cheer of the family circle, too, has been considered in this compilation, for "stories that have convulsed great audiences with laughter cannot fail to evoke an echoing ripple around the fireplace." Then, portraits of the greater lights in this galaxy of speakers are thrown in for the edification of readers. The few non-English selections, from the French, German, and Spanish, have been translated, sometimes specially for this occasion. The first three volumes are devoted exclusively to "After-Dinner Speeches," and these alone constitute a novel excuse for the present compilation. A portion of them have never before been published, and the range of all is from set preparation to various degrees of impromptu. Senator Beveridge and Minister Wu are the up-to-date representation. Sen-

ator Depew gets 60 pages, Mr. Choate 56, Gen. Horace Porter 53, Lowell 30, G. W. Curtis 28, Mr. Evarts 25, Mr. Beecher 23, Mark Twain 20; but of Mr. Reed himself there is nothing in the vein under consideration. It is convenient to have here Mr. McKinley's Chicago "Peace" Jubilee banquet speech on Duty and Destiny, of which a later generation will pronounce the humor more exquisite than that of Judge John Lowell's taking leave of the bench—a model in its own kind. There is another Chicago banquet speech, by Lincoln, in 1856—a mere fragment, but *ex pede Herculem*—which should have played the skeleton at the later hollow celebration. Of the second division, "Lectures," not much need be said. Phillips's "Lost Arts" and "Toussaint" jostle Artemus Ward's "Mormons," Thackeray's "Swift," Carlyle's "Mahomet," Claretie's "Shakspere and Molière," and Minister Wu's admirable discourse on the Doctrines of Confucius. This division is naturally far less scrappy than the old. The "introductions" to these two departments are little more than perfunctory.

—Some of our readers are aware of the all but unrivalled collection of Icelandic works brought together by our countryman, Prof. Willard Fiske, long a resident of Florence, and latterly at the Villa Landor. To a perhaps greater number his interest in chess is no secret. The two passions have been united in considerable gifts of works, chiefly relating to chess, to the National Library and the Chess Club at Reykjavik. He has further conceived the idea of starting a chess magazine printed in Icelandic, and the first two numbers of this journal have actually been issued. It bears the title of *I Uppnami* (*En prise*). All the expenses incidental to its publication are defrayed by its founder, and the proceeds of its sale are added to the funds of the Reykjavik Chess Club. In addition to this, Professor Fiske is printing a number of small pamphlets for free distribution among the islanders, dealing with the rules and principal moves of the game, of which they have but a rudimentary knowledge. To the north of Iceland, on the other hand, lies a small island called Grimsey. Its inhabitants—who number about 100 souls, are miserably poor, and obtain a precarious living by the exportation of wild-bird's feathers—are nearly all ardent chess-players, and this fact, together with their poverty-stricken condition, having been brought to Mr. Fiske's knowledge, he has ordered a number of chess-boards, books, etc., to be sent to them for general distribution. He has for some time been engaged on a history of 'Chess in Iceland.'

ROGERS'S HISTORY OF BABYLONIA AND ASSYRIA.

A History of Babylonia and Assyria. By Robert William Rogers, Ph.D., D.D., LL.D., F.R.G.S., Professor in Drew Theological Seminary. In two volumes. New York: Eaton & Mains. 1900. Pp. xx, 429, xv, 418.

Of the 429 pages in the first volume of Prof. Rogers's work, more than 250 deal with travels, explorations, and excavations in Persia, Babylonia, and Assyria, and the story of the decipherment of the cuneiform script in its various genera, including "Sumerian and Vannic." In other words, one-quarter of the entire work is of the nature of a preface. This might be unfavorably criticised in a work calling itself 'A History of Babylonia and Assyria,' if it were not for the fact that this prefatory matter is probably the most valuable part. Indeed, the first eight chapters constitute a monograph on the subject of Babylonian and Assyrian exploration (including the decipherment of inscriptions), the most complete and thorough yet published in any language. Prof. Rogers has diligently sought out the records of all visits to the country, from the journey of Benjamin of Tudela in 1160 A. D., in the interest of his Jewish co-religionists, to the last reported discovery of the University of Pennsylvania expedition to Babylonia at Nippur in the spring of 1900, and we must humbly confess that he cites the names of not a few travellers of whom we had never heard before. Inasmuch as it was through the decipherment of the Persian inscriptions that the way was opened to the study of the remains of Babylonia and Assyria, the first chapter is devoted to an account of the earlier travellers and decipherers in Persia, beginning with the visit to Persepolis of Odoric, the Minorite friar, in 1320. The first successful attempt at the decipherment of any of the characters of the Persian script was made by Grotefend, who presented his methods and results to the Göttingen Academy of Sciences in four papers in 1802 and 1803. The original papers were found in the archives of the Academy and published many years later, but at the time the Academy "refused absolutely to believe in his methods or his results, and would not take the risk of disgracing itself by publishing Grotefend's paper, describing his work, in its transactions" (p. 54). German writers invariably speak of Grotefend as the man on whose foundations all the later work of decipherment rested; and, influenced too much, we cannot help thinking, by them, Prof. Rogers describes his fairly correct decipherment of the proper names Darius Hystaspes and Xerxes, and the common noun "king," which was substantially what Grotefend achieved, as an "epoch-making result," from which, "in due course, came the power to read the words of Babylonian and Assyrian."

In point of time Grotefend has the priority among all decipherers of the cuneiform inscriptions, and he deserves the credit of that priority; but "the power to read the words of Babylonian and Assyrian" did not come in due course from his efforts. His results are rather interesting historically as the first partially successful efforts at the decipherment of a very few words, not as the actual basis of later decipherment. It is Rawlinson's work on which the whole structure of cuneiform decipherment in all its genera depends, and this work was not the outgrowth of Grotefend's discovery. As Rogers says, Rawlinson "had certainly begun his work and adopted his method before he learned of what was going on in Europe" (p. 64). Later, he obtained some suggestions and corroborations from the work of Burnouf and Lassen, who had on their part utilized the labors of Grotefend. It is to Rawlinson's achievement that the term "epoch-making" should be applied—his transliteration and translation of the Persian text of the trilingual Behistun inscription in 1846, and his memoir on the Semitic text of the same inscription in 1851. It is the latter with which the study of Babylonian and Assyrian begins.

Following the account of the decipherment of the Persian cuneiform comes a chapter on the "Early Explorations in Babylonia." It is interesting to note that Eldred, in 1583, and others, supposed Baghdad to have been the site of ancient Babylon—a confusion which was, in part at least, due to the identification of the remains called Akerkuf, near Baghdad, with the Tower of Babel. Eldred thus describes these ruins:

"Here also are yet standing the ruines of the olde tower of Babell, which being upon a plaine ground seemeth a farre off very great, but the nearer you come to it, the lesser and lesser it appeareth: sundry times I have gone thither to see it, and found the remnants yet standing about a quarter of a mile in compass, and almost as high as the stone work of Paules steeple in London, but it sheweth much bigger" (p. 90).

The same description is true to-day.

In general, the account of the explorations and excavations, as also of the decipherment, is not only remarkably full and accurate, but also peculiarly interesting, owing to the connection which Professor Rogers attempts to establish between one work and another, imparting to the whole story a logical cohesion. We must question a statement regarding the latest results of the University of Pennsylvania's expedition to Babylonia. Quoting from Hilprecht, Rogers says that there were found by the expedition at Nippur "not less than sixteen thousand cuneiform documents, forming part of the temple library during the latter half of the third millennium B. C." Is this statement not somewhat premature? Have those documents been actually examined? That the tablets were found there is no question, but no information has been forthcoming regarding their contents to prove that they are a temple library rather than a mere deposit of archives, such as those which have been found elsewhere at Nippur and Telloh. It is devoutly to be wished that they may prove to constitute a library, and not mere archives of contracts and the like.

After this admirable monograph there are three or four chapters of an introductory character on the sources at the historian's disposal, the geography and ethnology of Babylonia and Assyria, and the chronology of their rulers. Against some of Professor Rogers's statements in his geographical chapter entitled "The Lands of Babylonia and Assyria," we have put a question-mark. For instance, he says that the alluvial territory deposited by the Tigris and Euphrates at the head of the Persian Gulf is growing "at the rate of about a mile in seventy years, and there is good reason for believing that its average growth in historic times has been not less than a mile in thirty years" (p. 268). The first part of the statement comes from Ainsworth. The second part suggests that there is some sort of evidence that the rate of deposit was less than half as rapid in early times as at present. We are not aware that there is any such evidence, and consider Professor Rogers's statement misleading in so far as it suggests the existence of information which does not exist. On page 273 he says:

"The Tigris and the Euphrates have both flood seasons, and carry their waters over a wide extent of country, exactly as the Nile. This fact is so perfectly clear that there can be no doubt concerning it, though Herodotus directly asserts the contrary, saying, 'The river does not, as in Egypt, overflow the corn lands of its own accord, but is spread over them by the help of engines.' "

In point of fact, there is a portion of the alluvial land which is flooded by overflow, but over by far the largest part of the country water must be spread by artificial means, as Herodotus says.

On page 282 Professor Rogers speaks of the variety of the trees of the land. So far as Babylonia is concerned, this statement is incorrect. The land is and always has been notably deficient in trees. On the next page he says: "The larger animals were numerous, but of all the varieties that existed wild only the ox, ass, goat, and sheep were domesticated at an early period and made useful to man. To these were added the domestic hog, which seems, however, to have remained in a semi-wild state. In a later period the horse and camel were brought into use." And again: "The wild animals were of extraordinary number" (p. 284). So far as Babylonia is concerned, we are not aware of any evidence of the existence of numerous larger wild animals, or that the ox, ass, goat, or sheep ever existed wild there. Professor Rogers mentions also two varieties of lions, "one without a mane and the other with a mane of thick, tangled black hair." Has he not confused sex with species?

On pages 286 and 287 he says, speaking of the manufacture of bricks, "some of these were dried in the sun, and were then deemed sufficient for the filling in of the interiors of walls. Others were baked in kilns, and with these the walls were faced." This would give the impression that sun-baked bricks were used in general for interior filling only, which is not the case. Walls faced with kiln-baked bricks were the rare exception. Sun-dried bricks were in general use for all purposes, and even the tablets used for writing were in the vast majority of cases sun dried. On page 291 our author says: "Somewhat north of Larsa, probably at the mound of Tell-Id, was the city of Girsu." He has a bad habit of stating a thing as probably so on quite insufficient evidence, or, still worse, of saying "doubtless such and such was the fact" where the matter is in reality altogether in doubt and he is merely guessing. The only evidence for the identification of Tell-Id with Girsu is that the city of Girsu would seem, from the inscriptions, not to have been very remote from Larsa, and is, therefore, to be sought in some of the ruin mounds near Larsa. Tell-Id is a mound (a sand hill, it is true, but with indications of ruins at the foot) not too far removed from Larsa; but there are in the same general region a large number of mounds, the names of many of which we do not even know, for they have none, and any one of them would equally well satisfy the condition of being not too far removed from Larsa.

On pages 294 and 295, speaking of Marduk, he says: "But Marduk's own position in the pantheon was not great enough to bring to the city a religious primacy, and he was therefore identified with the great god Bel, and under that name was worshipped in Babylon." This gives a false idea of what actually took place. Bel, lord, was an attribute of the god rather than his proper name. In the earlier period, En-Lil of Nippur was the Bel or Lord *par excellence*. When Babylonia gained the hegemony, its Bel, Marduk, came into prominence, and ultimately became *the* Bel, ousting En-Lil from that position.

Turning to the chapter on chronology, we do not find Professor Rogers's treatment of the earliest period satisfactory. He accepts the date of 3750 B. C. for Naram-Sin and 3800 for Sargon on the basis of Nabonidus's inscription, in which he professes to have found "the foundation-stone of Naram-Sin, which no king before me had found for 3200 years." Rogers admits that "it is indeed hardly probable that the historiographers of Nabonidus had before them lists which carried the dates backward to the exact number 3,200. It looks like a round number, and was probably intended to be so taken," but adds: "To cast it away altogether is, however, to leave us in the dark without a single definite point for reckoning" (p. 319). Accordingly he, very illogically, considers it "best to hold the date 3800 B. C. tentatively, pending further light on the subject." In other words, his "definite point" is no "definite point" whatever. The chronological lists of the early kings, on pp. 336 and 337, given as "reasonably well attested," are worse than useless, inasmuch as they mislead the reader, making him think that we know what we do not know. It would be far better to state the simple facts and leave the kings undated for the earlier periods, merely giving us what is known as to their order, showing which are contemporaneous, and what indications there are as to longer or shorter periods intervening between successive sovereigns. Even after 2300 B. C., as Professor Rogers points out, the chronology of Babylonian dynasties is in a desperate condition. Of the period before that we really know nothing but the names, and to some extent the order, of between forty and fifty kings and other rulers reigning contemporaneously or successively in Kengi, Shirpurla, Erech, Ur, Agade, Isin, and Larsa. They are few in number for the length of time over which their reigns are supposed to extend, and, when they are stretched out into long chronological tables, one is involuntarily reminded of the length of age of the antediluvian patriarchs in the Bible, so enormous are the periods assigned for the spaces between them.

We have dwelt at some length upon the prefatory and introductory chapters because they seem to us to constitute the most important portion of the work. The history proper is a mere chronicle of dynasties, wars, conquests, and defeats, with a notice of a building here and there. There is no attempt to give the history of the people, the progress and development of their civilization, their manners, customs, arts, etc. Professor Rogers has conscientiously examined an immense amount of original material, and in footnotes scattered through both volumes he gives welcome references to the inscriptions which have been consulted, and the literature on those inscriptions. Ten years, he says in his preface, have been consumed in the preparation of this work. It will prove a useful book of reference to the student, who should, however, have been furnished with a map. It is impossible to follow the Assyrian wars without some map, however sketchy it may be, and Professor Rogers's identifications of the countries mentioned in the Assyrian inscriptions would be vastly more valuable if he had thus illustrated them.

Was it the endeavor to make a rather dry and repetitious chronicle attractive to the average reader that led Professor Rogers to the use of a style which is sometimes too artificial and declamatory for ordinary historical purposes? His style is also too often careless. But more serious than such defects is the habit, already alluded to, of overdrawn statements or the presentation as facts of theories which really have no objective basis. We read too much of the Babylonian stock, the exhaustion of its vigor, the intermixture of other blood, the creation of a new stock, etc., or of the intrigues which must have influenced certain actions and caused certain events. We are told of Labashi-Marduk, the Labassarachos or Labarosoarchodos of the Greeks, that he "was but a youth when he became king. At once he became the subject of a conspiracy, directed against him, says tradition, because he displayed evil traits of character. That this reason was a mere excuse for a deep plot of the priesthood to wrest the throne from his hands there can be little doubt" (vol. ii., p. 358). What evidence is there of such a plot of the priesthood? Professor Rogers adduces none, but merely asserts, in the method which we have already criticised, that there can be "little doubt" that there was such a plot. That is not history. Again, he mentions Nabonidus's archæological ardor, as illustrated by notices which occur in his inscriptions, "that such and such a king's name has been found, and that the king had reigned so many years before the king who was now renewing their fallen works. These notices in the inscriptions of Nabonidus make his inscriptions of surpassing value to the student of the past." For corroboration of this he refers us in the footnote to the chapter on "Chronology" in the first volume. Turning to that chapter, we find, in the first place, that Nabonidus is not the only king who makes such references in his inscriptions; in the second place, that there are only three known inscriptions of Nabonidus in which such references occur; and in the third place, that the dates given in these inscriptions of Nabonidus are either altogether rejected by scholars, or at least are irreconcilable with certain other evidence as to the dates obtained from other sources.

In his treatment of Bible history, Professor Rogers seems to us admirably fair and judicious. We do, however, think that he does not altogether satisfactorily grasp the relations between Rezin of Damascus and Pekah of Israel, on the one side, and Ahaz of Judah and the Assyrians, on the other (vol. ii., pp. 127, 128).

The book is presentable to the eye, of good paper and admirable print, and the publisher's work is, in general, well done. We have marked a few misprints, due in most cases to careless proof-reading.

MORE NOVELS.

The Fortune of a Day. By Grace Ellery Channing-Stetson. Chicago: Herbert S. Stone & Co.

Through Old-Rose Glasses, and Other Stories. By Mary Tracy Earle. Boston: Houghton, Mifflin & Co.

King's End. By Alice Brown. Boston: Houghton, Mifflin & Co.

A Pillar of Salt. By Jennette Lee. Boston: Houghton, Mifflin & Co.

The Heritage of Unrest. By Gwendolen Overton. Macmillan Co.

The Story of Sarah. By M. Louise Forsslund. Brentano's.

The Fourth Estate. Authorized translation from the original of A. Palacio Valdés, by Rachel Challice. Brentano's.

Lords of the North. By A. C. Laut. J. F. Taylor & Co.

The Ways of the Service. By Frederick Palmer. Charles Scribner's Sons.

On Peter's Island. By Arthur R. Ropes and Mary E. Ropes. Scribners.

Mrs. Channing-Stetson's short stories of Italy have the grace and refinement of her former studies. It is true that every year adds a gray hair to stories of Tuscan Beppos, Angiolinas and Padre Anselmos, and to the Anglo-Italian dialect appertaining thereto—the interjected *altro, che,* and the unspeakable "securely." However, they are all very charming, these Tuscan types, and charmingly adapted to the short story, in their equal leaning to the naïve and the dramatic. The writer sees sympathetically, chooses like an artist, and writes in simple, fitting style, affording in her modest book an hour's agreeable home travel.

Mrs. Earle's stories, of South and West, contain pleasing likenesses of local characters with coloring and dialect infused clearly but not heavily. These as a rule are subordinated to a definite point of incident in each story—too slight to be called a plot, but standing on its own feet, and gathering about itself as drapery the manners and speech of each indicated region. The writer seems to have a gift for collecting little unusual events, and putting them together with an art which effectively conceals art.

Miss Brown's 'King's End' reflects a rugged New Hampshire village with its surrounding upland pastures and pine woods and its variously queer and romantic peopling. The characters are far from the stereotyped village oddities. There is hardly one among the many who is not cast in an original mould; but they are drawn with a firmness and confidence that make them self-justifying. They seem less portraits than creations, and only well-executed creations could wear the reality of these. If not in every instance wholly credible, they are at least interesting. Many eccentrics are introduced and many absurd things happen, but the sense of probability is pleasantly challenged rather than uncomfortably jarred. The story, largely one of struggle between love and the Puritan's call to evangelic duty, moves forward engrossingly among sounds and odors of wild, rough New England hill-country and old gardens. An occasional tang of the so-called subtle in style leads us to express the hope that Miss Brown will not adopt an imitation Meredith manner.

'A Pillar of Salt' tells the story of an inventor and his ruling passion, and of his wife's part in his achievements—the usual share of the tired, practical, poverty-threatened wife of a visionary. The scene is laid in a mill-town of Connecticut, with a passing glimpse of a Western farm. The story, though not at all a Miss Wilkins story, is told in her fashion of short, pellet-like sentences, and with her microscopic eye for affairs of the village, farmyard, and kitchen. The mental processes of the mill-owner, the foil to the inventor, are not quite obvious to the reader; and where he touches the plot, it wavers. But there is capital description of the inventor, his wife, the five children, the neighbors, with a deal of country usage woven into the story in an entirely natural way. It is a little book of unmistakable ability—more so, however, as it steps onward than in contrived culmination. Culminating things happen, indeed, yet not inevitably. It has its strength in being a study of minds and manners, and, if its author's first work, should augur well for future essays.

Here and there among many amiable and more or less able experiments in bookmaking one lights upon a real book. Such is 'The Heritage of Unrest,' a story of the Territorial Indian wars of the 70s. The balance is praiseworthily held between the general historic interest of the great Indian question and the personal elements of private romance and development of character. Here is to be found a fine commanding view of the subject in its larger aspects—the civilian, military, and governmental treatment of the burning problem; further, a wonderfully graphic picture of the barbarous cruelties of the roused savage, with no less direct a light thrown upon the wrongs done to the red man. Of the army, whether officers or privates, the plain, dogged, do-your-duty heroism is gallantly chronicled; while the studies of the heroine with the strain of Apache in her blood, of the two men whose lives vitally touch hers, of the group of minor persons, are at once original and brimming with life. Such a book must have its share of atrocities. It is the history of a damnable epoch. The author's sense of proportion, grasp of cause and consequence, and her powerful way of conveying the story at once to mind and pulses, are quite exceptional.

In 'The Story of Sarah' we live on the shore of Long Island—now in a Dutch settlement, now in a native American village across the dividing brook, now on the sand beach and the dunes where the Life-Saving Station rears its fateful lookout. Dutch versus American forms part of the animus of the tale, but we must hope that it is only the romanticist's need of shadow that shows us the life-saving crew drunk on the night of the shipwreck and roused to a belated heroism by the young Dutch hero. There are pen-strokes of a crude strength in the descriptive portions of this novel. We clearly see villages, ocean, and bay, and life as influenced by each. We witness the horrors of shipwreck, the pangs of misplaced passion. We make acquaintance with many seaside types, few hackneyed, some forcible. But occasionally the positive characterization becomes caricature; the melodrama roars; the reader is annoyed at being made the gallery in spite of himself. The heroine at times behaves so preposterously that we are betrayed into the immorality of wishing the villain would succeed in carrying her off. But he does not; the sun goes down happily on a calm sea and a Dutch coffee-drinking, leaving us penetrated with a lively sense of sea and dune and some superfluity of human nature.

With the shores of Long Island one may contrast the Cantabrian coast by reading Valdés's minute annals of the town of Sarrio. The field is larger, the passions are the same. The tragedy is more tragic, the scandals more scandalous, the bouffe far more bouffe. The author of 'The Fourth Estate' has a fine talent for satirizing public and private affairs, and shows at length how a ridiculous press was established in Sarrio by the ridiculous enmities and aspirations of a ridiculous lot of grown-up children. The foibles of every one are described with a Balzac-like gift for detail, and with skilful differentiation, too, so that, for instance, he who is henpecked by his two sisters is in nowise to be confounded with him who is henpecked by his wife. Life would be rather tedious, one feels, in such company, and reading about it is rather tedious too. Yet one can yawn and admire at the same time. And admirable in truth is the minuteness bestowed on the human comedy as played by Spanish actors. A few noble souls lend seriousness to the scope of the story. Things surprising to the English reader are met herein, yet perhaps no more so than a Spaniard would find in a tale of Long Island.

History taught by tales of adventure has a recent manifestation in Miss Laut's 'Lords of the North,' a story of the last century's bitter wars between the two great fur-trading rivals, the Hudson's Bay and the Northwest Companies. The book begins with the kidnapping by Indians of a white woman and her child, and culminates in the Seven Oaks massacre of 1816, which in a sense marks the line between the days of pioneering and of home-building in a new world. While very like some scores of other books of adventure in form, this one has a comparatively untrodden country and unsung era for its basis. We meet old friends—the treacherous Indian, the wily French Canadian, the humorous Irish priest; the golden-haired, dare-devil saintly girl; the trapper with a thousand senses, the *habitant,* the *voyageur,* and eke the sublimely egotistic, modest, resourceful hero in the first person who acts like the 'Book of Golden Deeds' and talks like the Book of Acts. But, if we have these, we have also an insight into the lives of the early fur-traders and explorers such as we do not recall elsewhere, with many novel devices of peril and thrill. The book may be confidently offered to lovers of exciting reading, with a special recommendation to those who would fain realize what has been done for our country by "the unheralded forerunners of empire"—the old fur companies.

Mr. Palmer has made a volume of such readable stories that no one who opens it will leave it unfinished; and the reader's verdict will be that there could be no finer, stancher, more devoted tribute to the army and navy. The Anti-Imperialist naturally comes in for a snub; the "politician military" for many. Individual cases of lapse from the lofty standard of the service go to temper extremity of partisanship in the writer, but readers of this little book, whatever their political faith, cannot fail, we must think, to be stirred by its creed of loving and solemn pride in our service by land and sea—not necessarily as men who plant the American flag, but as men who do their duty by the steady light of corps attachment. We will not affirm that these stories as they stand would have been written had 'Plain Tales from the Hills' never been printed; but the likeness is one of occasion rather than of imitation, and the result an interesting work and a valuable document. The internal evidence is strong that these are the Philippines as they are.

A really good book by a foreigner dealing with Russian life and scenes, is so rare as to be almost non-existent. 'On Peter's Island' is the traditional exception which proves the rule. It is a thoroughly well-planned, well-executed story, of which the Russian settings are an essential part, not dragged in for the sake of

"local color," irrespective of the narrative, as is too often the case. Moreover, they are minutely accurate in detail, although so well managed that they never weary by their undue length. A general sense of proportion, in fact, is one of the characteristics of the book, as well as natural, yet clever, conversation and capital character-drawing. A Russian novel—one written by a foreigner, at least—would not be complete unless the plot hinged chiefly on the manœuvres of revolutionists; and the present work does its whole duty in that respect, including mysterious meetings, devious ways, sensational murders, and the like. For another merit the book may be heartily recommended to authors who are ambitious to write "Russian" novels: it proves how powerful an effect of nationality may be produced by intelligent observation and attention to details. For, as a matter of fact, this story does not penetrate much beyond the externals of *Russian* life. Even the rascally rich merchant and ex-convict, who is the twin-villain together with the plausible Pole, and the principal (almost the only) Russian in the story, is an international rather than a purely Russian type. For the rest, the characters are Americans, Poles, and English people, and the life described is not that of Russian circles, but that of the circumscribed foreign colony, which does not mingle with Russians and of which Russians know nothing. In short, while 'On Peter's Island' is neither a great book, nor a book such as a Russian would write, nor, strictly speaking, a Russian story, it is so interesting and so skilfully executed that it ought to hold a very good rank among the popular novels of the season.

Studies in European Literature: Being the Taylorian Lectures 1889-1899. Oxford: Clarendon Press; New York: H. Frowde.

This handsome volume excellently exemplifies the solidarity of European letters. The work of eleven different hands, touching the literature of five nations, in a period of time from Boccaccio to Prosper Mérimée, it has, amid all this variety, an essential and significant unity. It is vitalized by a fresh interest in the study of comparative literature. For a course of quasi-academic lectures the series as a whole is notably free from the *aura morta* of the traditional learning in this kind; with but a single exception, perhaps, all have a taking briskness and unconventionality, proving again that erudition properly digested *non inflat*. It is obviously impossible to notice minutely all the members of so comprehensive a collection. It must suffice to draw attention to the range and general quality of the papers as a preliminary of the more detailed treatment of two of them.

The initial paper, on "Literary Criticism in France," by Professor Dowden, is worthy of its position. It traces the evolution of French critical theory and method from Sainte-Beuve through Nisard, Schérer, and Brunetière, with some account of the criticism of the opposing camp of Taine and Hennequin. Considering that this paper was written twelve years ago, the discussion of the twy-formed aspect of French criticism, naturalistic and idealistic, is remarkably illuminating; the prophecy of a coming synthesis of the two has already been fulfilled in part in M. Brunetière's later work. As always in Professor Dowden's writing, we have many fragments of trenchant criticism by the way. Particularly good and quotable is his statement of the disparity of the critical doctrines of the 'Causeries de Lundi' and those underlying the 'Soirées de Medan':

"But what a contrast between the spirits of the two men; what a contrast in the application to life even of the ideas which they possessed in common! M. Zola, whose mind is over-ridden, if ever a mind was, by the spirit of a system—whose work, misnamed realistic, is one monstrous idealizing of humanity under the types of the man brute and the woman brute—and Sainte-Beuve, who in his method would fain be the disciple of our English Bacon."

The second lecture, Walter Pater's on Prosper Mérimée, is already known to readers of the 'Miscellaneous Studies' as one of the characteristic pieces of the author's intimate, interpretative subtlety, and an especially good example of his knack of retelling a story. Seven years later—to break the chronological sequence for the sake of a significant juxtaposition—came an unusually satisfactory piece of criticism in M. Bourget's lecture in French on Pater's stylistic master, Gustave Flaubert. It begins with an affectionate and reverent tribute to the memory of Pater, that "parfait prosateur." The essay itself is an admirable piece of work, quite in Pater's vein. The profound personal melancholy which informed Flaubert's work, and gave it a charm and permanence which would never have been attained by its theoretic objectivity, is felt and stated with great sympathy and precision; and the whole is a singularly lucid and flexibly modulated example of French prose at its best.

The student of style may gain much instruction by comparing this paper with M. Stéphane Mallarmé's "La Musique et les Lettres," which preceded it by three years. It is the old opposition of a scholarly and urbane realism against an enthusiastic neo-mysticism. Where Bourget's writing is a closely wrought, orderly paragraphed organization of ideas, Mallarmé's is a broken, oracular arabesque. His general contention is the familiar one of Poe and Baudelaire—which later became the gospel of the "Décadents," and even received the sanction of Pater—that music, by virtue of its direct and immediate expressiveness, is the norm and limit of all art.

The most musical of poets, Giacomo Leopardi, is discussed by Mr. W. M. Rossetti in a careful but rather pedestrian paper. Italian literature is further represented by Prof. Ker's lively study of Boccaccio's humanistic temperament, and an excellent appreciation, by Mr. H. R. F. Brown, of Paoli Sarpi, scientist, literary scholar and poltical reformer, who what he "dared to dream of dared to do." Nor is German literature neglected. Mr. T. W. Rolleston has a sound and sympathetic study of Lessing, and of Germany's debt to him; while Prof. Herford has realized the fruits of "Goethe's Italian Journey" with rather exceptional insight.

But perhaps the most striking thing about this collection is the evidence it gives of an increasing interest in the literature of Spain. Notwithstanding the spread of many literary types essentially Spanish, and in spite of the enormous popularity of 'Don Quixote,' the European mind at large has always found something cryptic and esoteric in Peninsular letters. But since Bowle, Southey, and Ticknor, the national literature which produced Cervantes and Calderon has received more and more attention from English, French, and German scholars. The first of the contributions of the present volume to the study of Spanish letters is M. Morel-Fatio's "L'Espagne du Don Quijote." We feel some commiseration for the Oxford gathering compelled to sit through twelve thousand words of not very Attic French; but while this is a long and very roundabout paper, it is, nevertheless, very informing. M. Morel-Fatio pursues no funambulous course in endeavoring to trace hidden ideals of Spanish character in the spirit of Cervantes's work. He applies the inductive, Sainte-Beuve method to the actual characters and incidents of 'Don Quixote,' and, by the aid of sound historical erudition, contrives to present an adequate picture of the life of the time. The life of the road, the manners of hidalgo and innkeeper, of nobility and riff-raff, the customs of the city and of the country, of plain and of mountain forest, political turmoil, economic progress, and ecclesiastical corruption, are all presented with admirable fulness and color.

Not the least useful essay in the book is Mr. H. Butler Clarke's study of "The Spanish Rogue Story." It contains a few minor inaccuracies. The 'Coplas de Jorge Manrique' is referred to "the later *sixteenth* century" (p. 319); at page 325 the titles of Rowland's English version of 'Lazarillo' and Mabbe's of 'Don Guzman' are confused; the 'Castigado,' or expurgated version of 'Lazarillo,' was not printed in 1572 (p. 326); the approvals, according to the collation of Dr. Chandler in his 'Romances of Roguery,' were August 5 and 21, 1573, and the imprimatur is of the same year. But, notwithstanding these peccadillos, the rationale of the picaresque tradition is conceived with great clearness and very picturesquely stated. Mr. Clarke has fully recognized the literary and social background of the Spanish rogue, and has been exceptionally happy in distinguishing his æsthetic value. In reading 'Lazarillo' or 'Don Guzman,' says Mr. Clarke,

"experience is widened without after taste of guilt, the imagination is stimulated, and the purpose of art, not, indeed, in its highest form, but in a form which all alike can share, is fulfilled. . . . Moral standards change so much that he [the rogue] now figures chiefly in criminal statistics, for the distinction between *picaro* and criminal, though very real, is disregarded by the law. The *picaro* is guilty of almost every crime, yet he is not black-hearted; above all he is no hypocrite. He is the irresponsible product of a state of society, he is primitive man in an artificial environment. . . . In order to enjoy his story, he must be looked upon as extra-moral, just as ambassadors and their belongings are by a fiction extra-territorial."

In closing his account with the work of Quevedo, Mr. Clarke fails to include the final stage of the evolution of the Spanish picaresque romance. It is only in the 'Teresa' and 'Trapaza' of Solarzano that we see the full literary fruition of the form—the emergence of a typical personality out of the inchoate mass of thievish and scurrilous incident. It was in this stage that the *picaro* lent himself to the more workmanlike and literary treatment of the French romancers. Le Sage's 'Gil Blas' and his capital version of 'Don Guzman,' "purgée des moralitez superfluës," owe much to Solarzano. Mr. Clarke, however, is not so much concerned with the

literary affiliations of the rogue as with his relation to the Spanish society of his time, and the function of the story as a medium for social satire; and in this direction his study leaves little to be desired.

Viewed at large, these lectures serve to illustrate Mr. Dowden's theory of the trend of criticism, which concludes the first of the course:

"Literature has turned away from the lyrical, the personal, or, as they call it, the subjective, to an ardent study of the external world and the life of man in society. The lyrical, the personal, has doubtless a subordinate place in literary criticism, but the chief work of criticism is that of ascertaining, classifying, and interpreting the facts of literature. We may anticipate that criticism in the immediate future, if less touched with emotion, will be better informed and less wilful than it has been in the past. If it should be founded on exact knowledge illuminated by just views, and inspired by the temper of equity, we shall have some gains to set over against our losses."

Catalogue of the Morse Collection of Japanese Pottery, Museum of Fine Arts, Boston. By Edward S. Morse, Keeper of the Japanese Pottery. With 68 photogravure plates, of which 40 are accompanied by guide plates drawn by the author, and 1,545 potters' marks in text. Cambridge. 1901. Pp. xii, 384.

This book is an unusually handsome and well-made quarto, simple, dignified, and manly, and an ideal catalogue of a collection of works of art. It may therefore invite the attention of many students not specially devoted to the art of the Far East, nor even specially to the keramic art. The frontispiece shows a hall in the Boston Museum of Fine Arts, that long, side-lighted gallery occupied by the Morse collection. Ten cases are set in a long row like platoons of soldiers when the regiment is "in column." Each case is set with one of its narrow edges close against the upright pier which separates two very large windows; each case has two fronts, and each front is divided by an upright which helps support the shelves. We have, then, forty shallow receptacles, each fitted with shelves, and looking like bookcases except that the shelves are more irregularly placed; and each of these cases is the subject of one photogravure plate in the body of the present work. Forty plates, each one showing the larger and the smaller pots, boxes, bottles, bowls, saucers, and incense burners arranged on from five to seven shelves, display the whole collection. Correspondingly, the printed catalogue of the pieces reaches the number 5,324, which is attached to a figure (nine inches high and interesting in character, expression, and modelling), the impressed mark upon which may be read in any one of three different ways.

Every one of these forty half-tone plates has printed upon a thin leaf which faces it a diagrammatic translation, so to speak. Rough but expressive outline drawings of *all* the pieces shown in the photograph are arranged in exact correspondence with the picture, and every one of these sketches has its catalogue number appended. You find in the photographic plate the piece which interests you; you look at the opposite page for its rendering in outline; you note that its number is (say) 5,275, and by turning back two pages you find that the mysterious pile of three pieces and a cover with two curious downward sloping spouts form a still, thirteen and a half inches high, of warm gray clay, with light brown glaze, with flowers in white slip and the name Hozan impressed. An index of the provinces of the Empire succeeds the catalogue, and this is followed by an index to potters filling three of the large pages and an index of names filling ten pages, and here those of us who had heard of the book in advance thought that our new possession would have its ending.

There is, however, an appendix, though it is not called so—a series of twenty-eight photographic plates, in which some of the same pieces that are to be found in the forty catalogue plates are reproduced on a much larger scale. These are admirable pictures. They are large enough to let the patterns of painting or of stamping be seen, to allow the exact effect of inlay or of slip decoration to be judged, and, except that here and there a side turned from the light is really too black, and suffers from the lack of that rare artistic excellence known roughly as translucent shadows, is as nearly perfect as a monochromatic representation of the parti-colored piece can be. Pains have been taken to focus for the negative the especially important feature of each piece, as may be seen in Plate VI., where the round dish, No. 1108, shows off its long inscription of fourteen ideographs quite perfectly. Reference to the catalogue tells us that this inscription is a poem, and the student feels that he has no right to ask for a translation of that; it is, moreover, perfectly legible to him who can read it. In like manner, one of the gems of the collection when considered as a collection of works of art is shown in Plate XXVIII., No. 4645, a covered jar with a bail handle and with these peculiarities, that the bulging shape is closely like that of one of those Cologne jars which we call Greybeards and Bellarmines, but without the small and slender neck, which is replaced here by the cover, and that this cover has to be slipped in between the uprights of the handle when removed or replaced—each of these an unusual circumstance in Japanese pottery.

The preface sets forth the purposes kept in view by the maker of this collection and his friends and hearty supporters, the director and the trustees of the wisely managed Boston Museum. It is pointed out that in the Museum of Fine Arts the arrangement of the pieces had need to be somewhat artistic, bringing the important specimens of design well to the point of easy observation; but it is further shown how the keramic interest of the most devotedly keramist of all peoples has been subserved, and how the ethnological, descriptive, and artistic uses of such a collection have also been promoted. It is an extraordinary showing, too, which the preface makes—that of the very large circle of friends and allies who have been laid under contribution by Mr. Morse, many of them for specimens presented, many others for aid in research; the United States and Japan appearing together in the persons of their more intelligent citizens. All this has been rendered possible by the contributors to the fund which made the collection the property of the Museum. Then follows an introduction which is in itself a curious treatise on Japanese fine art as applied to objects of daily use. It should be read in connection with the briefer prefaces to those divisions of the catalogue which correspond to the provinces of the kingdom. A series of paragraphs explain intelligently the allusive and sentimental significance of some of the most common decorations. Moreover, it is pointed out how generally the Japanese use pottery where Western people use glass, silver, pewter, and porcelain. It is rather hard for a modern who cannot find wine-glasses thin enough for his old wine of Bordeaux, to imagine the refined men of Plato's time drinking the wines of their choice from a kylix of baked clay whose lip is the rounded edge of a wall at least a sixteenth of an inch in thickness. The Japanese are also capable of that feeling for the appropriateness of the vessel to the drink, for they take saki out of the thinnest of porcelain cups, or, under certain circumstances, out of lacquered wooden saucers as thin and as delicate as the porcelain itself. But pottery is the thing after all; and when one has had the privilege of drinking the decoction of powdered tea from the lip of a bowl, thick, indeed, but delicately worked and finely glazed, he understands how possible it is to become accustomed to this as well as to the comparatively thick lip of the cup from which he drinks *café au lait* in the morning.

The dedicated objects, the symbolical objects, the vessels for the keeping of food, for the cooking of food, for the growing of plants, for smoking, for tea-drinking, for burning of incense—all of these are recorded in critically accurate language. The motives of painted and other keramic decoration are described. The most amusing thing in all this body of information is the account of the amateur potters, who appear to be the special hindrance to the cataloguer in pursuit of thoroughness; for, as the introduction says:

"It has been the custom, in Japan, for devotees of the tea ceremonies *usu-cha* and *sen-cha*, to try their hand at an art they all adore: . . . for example, the amateur potter has made a pilgrimage to some distant province, from which region he brings back a quantity of clay; he gathers materials for glazing from another province, settles down two hundred miles from the last place, and struggles with the difficulties of this time-honored art by shaping a bowl or incense-box, and, having baked it, may apply the glaze when he gets home, and bake it again. An artist friend adorns it with a sprig of bamboo, and signs it with his pseudonym. Such are the difficulties in the way of identification of these veritable puzzles."

The Stage in America, 1897-1900. By Norman Hapgood. The Macmillan Co. 1901.

Mr. Hapgood's book, in spite of its rather juvenile cocksureness, its occasional unfairness, its queer standards of histrionic excellence and dramatic composition, is something quite distinct from and infinitely superior to the great majority of ephemeral theatrical volumes, composed of insignificant biography, padded with trivial anecdote or crazy puffery, and baited with pretty photographs. It is the work of a man, lacking in experience, to be sure, not too catholic in taste, and over-fond of generalizing upon somewhat narrow and arbitrary theories, which, however true they may be in themselves, are not of universal application, but who has brought to it thought, capacity, and information, and who, having formed independent if not always original ideas, knows how to express them in forcible and attractive literary fashion. Even those lovers of and believers in the drama who are unable to agree unreservedly with

all his precepts and conclusions, will appreciate the vigor and general intelligence of his criticisms, the sincerity of his convictions, and his comprehension of the fundamental principles upon which the theatre must be conducted if it is to demonstrate its right to be considered an art.

A considerable part of the book is reprint, and of that which is new a good deal is not important. It would have been difficult, indeed, to fill 400 pages with very weighty matter concerning the stage-doings in this country, or elsewhere, during the last three years. The opening chapter on the much talked-of theatrical syndicate was first published in the *International Monthly*, that on the drama of ideas in the *Contemporary Review*, and others are largely reproductions from the *Bookman*, the *Commercial Advertiser*, the *Atlantic Monthly*, etc. The syndicate article is valuable as a notably clear and concise statement of the inception, the development, the operation, and the effect of that mischievous monopoly, although it would have been well if more attention had been paid to what is, perhaps, its most pernicious influence, its conversion of moderately competent actors into "stars," and its practical annihilation of all schools of training for novices. Incidentally, the story is a striking illustration of the sagacity of Mr. Daly's remark that actors, when their personal interests are concerned, are far too selfish to be capable of organization into a practical protective association.

In his essay on the drama of ideas, although Mr. Hapgood's estimates of certain plays, "Secret Service" and "Sherlock Holmes," for instance, are curious, there is much common sense, especially in relation to the modern psychological and symbolical drama. Nothing is much more ridiculous than the notion, so common among the younger rhapsodists, that there must be genius in whatever is mystical, carnal, obscure, or largely incomprehensible. Simplicity and clarity are the unfailing characteristics of all the greatest poetry. Symbolism, of course, can be detected by the eye of faith in anything, but if it is not obvious, it is not particularly valuable. As for psychology, that is necessarily an element in any work of fiction that deals with men and women. The trouble is, that in many of the dramas which profess to be constructed on strict psychological principles—and it is not an exact science—the development is either inconclusive or contrary to common experience, while the theme is morbid and repulsive. The heaven-born dramatist deals with human nature in its broadest phases, and finds therein a boundless scope, without recourse to the subtilties of scientific analysis, and thus appeals irresistibly not only to the public heart, but to the public understanding. Mr. Hapgood underrates the intelligence of the theatre-going masses. He seems to think that the crowd appreciates only the broader melodramatic or humorous effects in the higher drama. This is only partly true, if true at all. The famous soliloquies of Shakspere are applauded quite as fervently as the combats. There were no more acute critics than the "mechanicals" who worshipped Phelps in the legitimate drama for nearly twenty years at Sadler's Wells.

As has been intimated, Mr. Hapgood's judgment is apt to be a little precipitate and flighty, and not always in accordance with his expressed theories. His discourses on the plays and dramatists of the day are vivacious and interesting, but it is rather disconcerting to find him coupling James A. Herne and William Gillette as the two ablest American dramatists, and awarding to the latter the special credit of originality. Mr. Herne, undoubtedly, has done good and original work, notably in "Griffith Davenport," which contains at least one intensely human and dramatic scene, and in "Sag Harbor," which has excellent local color and some very genuine pathos. His "Margaret Fleming" was superior melodrama, and in his "Shore Acres" there were laudable imaginative touches. But his pieces are of uneven quality. Mr. Gillette, at best, is only an adroit theatrical sensationalist and expert manipulator of old but superficially effective theatrical material. It is still more astonishing to read Mr. Hapgood's enthusiastic laudation of Mr. Mitchell's crude parody of 'Vanity Fair,' and of Mrs. Fisk's *Becky Sharp*, especially after his comments upon some of the other book plays. But he is always more convincing in his general reflections than in his details. This remark applies even to his capital article upon the Irving Place Theatre, which is extravagant and unjust in some of its comparisons, but as a whole is a well-deserved tribute to a most competent, valuable, and instructive organization and its enlightened director. Mr. Conried is the one example in this country of the well-equipped manager. He not only is personally familiar with the stage literature, past and present, of his country, but is endowed with the artistic spirit, and realizes that the play, if worth anything, is of more importance than its trappings. Having, after years of patient endeavor, succeeded in organizing a real stock company capable of at least an intelligent interpretation of drama of every degree, from poetic and historic tragedy to the latest farce, he is able to present every season a repertory singularly rich and varied, at once educational and entertaining. It is probably the fact that his best achievements in the way of production are not always the most remunerative, but this is because his German audience, owing to peculiar social conditions which cannot now be considered, is only a small fraction of the great body of citizens of German descent, and long runs are impossible. But, being something more than a mere speculative showman, he is willing to make an occasional sacrifice of gain for art's sake, and has thus raised his theatre to a place of honorable distinction. An English theatre in New York, conducted upon equally sound artistic and business principles, with an unlimited audience to depend upon, would yield such solid financial returns that its very prosperity would compel imitation and bring about a revolution in the whole system of management.

Space will not permit discussion of Mr. Hapgood's criticisms of contemporaneous performances, nor is anything of the sort necessary. Generally speaking, his estimates of American actors of the day are lacking in that sense of proportion which can be attained only through familiarity with standards not now existent and not likely to be soon revived. Youth in this instance is at a disadvantage. His comments upon modern plays and dramatists are, as has been hinted, apt to be smart, rather than broad or judicious; hasty, dogmatic, and self-opinionated; but never dull. In many cases the subject-matter is quite unworthy of the attention bestowed upon it. But that, perhaps, was inevitable if a substantial volume was to be made about the theatrical incidents of three almost barren years. The book contains much—including the reviews of casual performances by novices of Russian, French, and German drama, and frequent quotations—which might be described, rather uncharitably perhaps, as padding, but it is written with a frankness, ability, purpose, and conviction that atone for its bumptiousness, and lift it entirely out of the ruck of box-office publications. It is a genuine bit of theatrical literature, well worth the reading.

Health and a Day. B. Lewis G. Janes, author of 'Life as a Fine Art,' 'A Study of Primitive Christianity,' etc., etc. Boston: James H. West Company.

Dr. Janes's title will be recognized by all Emersonians and many others as a part of Emerson's "Give me health and a day, and I will make the pomp of emperors ridiculous." This book is a series of little essays which set forth in a pleasant manner the essentials of a healthy life, or rather what Dr. Janes considers the essentials. Some of his readers will, no doubt, apprehend a lack of the traditional theological and ecclesiastical elements. These do not mean much for Dr. Janes, except as expressions of man's evolutionary course, though he is always reverent of others' reverence. He is well known, or should be, as a devout disciple of Herbert Spencer, and as having done quite as much as Dr. John Fiske or the late E. L. Youmans to disseminate Spencer's philosophical and ethical beliefs. These are fundamental to the edifice here constructed fourteen chapters high. But we have nowhere a crude reproduction of the master's thought. Everywhere it is perfectly assimilated, and mingled freely with what has come to the writer from many different sources, preëminently his own careful meditation on the nature of the good and useful life. Dr. Janes has attended thoughtfully to the criticism which has been made on Spencer during the last thirty years. To some extent, it has modified his original assent; and where he still holds fast the integrity of that, he does it with such ability and resource as would make him no despicable antagonist for the best equipped of Spencer's enemies.

But the relation of Dr. Janes's book to Spencer's philosophy is interior and not formal or excessive, and can easily be insisted on too much. Willing to confirm his own opinions with those of the best thinkers, for every sentence from Spencer he has several from Emerson. The defect of his book is the absence of any touch of humor, and of his style a preponderance of Latinic words. What is best in it is not the fruit of reading, but of personal experience. The book, we are quite sure, was lived before it was written. Beginning with the care of the body, it goes on to the intellectual and ethical aspects of man's personal and social life, never for a moment losing sight of the fact that, on this bank and shoal of time, man is not a body with a soul or a soul with a body, but at once body and soul, and that whatever hurts or helps the one helps or hurts the other, and the central man.

There is mellow wisdom concerning the care of the body, food (for that and for the mind), the true education, "Vocation and Avocation," the uses of travel, "The Ministry of Pain," the social organism, etc. Incidentally all of the great problems which are affecting us are touched upon. The Christian Scientist is reckoned with, the Imperialist, the man of war; each with so much urbanity that he would be a churlish fellow who should resent what is so kindly meant. We should have better men and women, better home-life, better politics if the lessons tendered here so graciously were taken well to heart.

Factory People and their Employees. By Edwin L. Shuey. New York: Lentilhon & Co.

There are few directions in which more substantial advances in civilization can be made than in improving the relations between employers and workmen. In certain respects their interests are conflicting. Workmen naturally desire to sell their labor at the highest price possible, and employers are under continual pressure to keep down their expenditure for this account. But in other respects their interests are identical. It is of the utmost importance to workmen that their employers' business should be prosperous; and it is equally important to employers that their workmen should be maintained at the highest degree of efficiency. There is, perhaps, little reason to suppose that conflicts over the rate of wages will ever cease. So long as profits fluctuate, wages must vary, while workmen will generally oppose a stubborn resistance to their reduction. But the influences that tend to increase efficiency not only are intrinsically beneficial, but also lessen the severity of the struggles over wages. In the multiplication of such influences, therefore, we may find the only practical solution of the "labor problem."

The author of this little book does not consider the question of wages, strikes, unions, and arbitrations, but confines himself to a narration of the various methods devised by enlightened employers for improving the lives of humble coadjutors. The record, which is chiefly confined to this country, is impressive and exhilarating. One manufacturer after another has awakened to the possibility of improving the conditions of work within the factory, and the conditions of existence without. Factory buildings have been cleansed, adorned, and almost beautified. The grounds about them have been laid out by landscape architects, and the houses and grounds of the workmen have been scientifically improved. Prizes have been given for the best-kept gardens; parks have been laid out, playgrounds established; libraries, gymnasiums, churches, and schoolhouses have been built. Bath-rooms and lunch-rooms have been provided in the factories; ventilation and lighting have been attended to; chairs with backs and footrests have replaced stools and benches; elevators have been introduced and ice-water supplied. Various forms of pensions and insurance have been devised, savings funds established, and coöperative stores introduced. The list is too long to be given here in full, and it would be invidious to specify particular employers as examples of philanthropy. That there is a bright side to the lives of workmen in factories is clearly proved by Mr. Shuey, and we can heartily commend his book to those who are inclined to take gloomy views of the condition of the working classes.

English Politics in Early Virginia History. By Alexander Brown, D.C.L. Boston: Houghton, Mifflin & Co. 1901.

The purpose of this book is to prove that the planting of Virginia was an attempt of the "Patriot party in England to plant a popular course of government in America"; that the subsequent history of the province consists of the efforts of the Crown and "court party" to misrepresent and baffle that attempt; that throughout the colonial period the Crown pursued the policy of destroying or sequestering the documents which placed the aims of the Patriot party in their true light, and of allowing only such histories or materials for history to see the day as suited the court party; and that in consequence all that history has been distorted and a great wrong done.

It is manifestly hard to prove a theory which starts with the assumption that the necessary evidence has been destroyed; still, we have a very considerable body of contemporary public documents of the first importance, and an immense mass of letters, memoirs, etc., from which we may gain a pretty clear insight into the time and its issues. It would have helped his case if Mr. Brown had proved that there was any "Patriot party" in England in 1606; that there was any Patriot party in Virginia in the first half of the century, and that the squabbles with the governors and the councils had any broader than local and temporary significance; that any document has been destroyed the possession of which would radically change the accepted history; and if he had shown what special facts of political importance have been concealed or misrepresented. It does not seem to the present reviewer that this has been done.

BOOKS OF THE WEEK.

"A solid and fascinating autobiography."

The Story of My Life.

AN AUTOBIOGRAPHY.

By AUGUSTUS J. C. HARE,

author of "Memorials of a Quiet Life," etc.

In four volumes, 8vo, cloth. Illustrated with wood-cuts and photogravures.

PER SET, $15.00.

M. W. H. says in the N. Y. Sun:

"A remarkable contribution to anecdotical literature. The author knows more about what is called 'society' in England and on the continent than perhaps any other man of his time. We have here an astonishing quantity of anecdotes about persons of distinction in the social, literary and political world. The narrative may also be described as a captivating record of travel. The sustained attractiveness of the volumes may be measured by the fact that there is scarcely a page that is not well worth reading. There is not a trace of padding in the book, and it is evident that the vast mass of materials at the author's disposal has been subjected to a winnowing process which is too often neglected in compilations of the kind. These volumes must be bought, for it is impossible to give by extracts an idea of the enjoyment to be derived from them."

The autobiography of the author of **"Memorials of a Quiet Life,"** and other delightful books has been in preparation for a number of years. Half of it was published in two volumes in 1898. The remainder has been delayed until now, when the death of persons mentioned has removed possible objections to its publication. The author has, during a long life of distinguished position and usefulness, come into contact with a great number of celebrated people, and the book is replete with anecdotes about people and subjects of much interest.

The New York Mail and Express says:

"One has to read only a few pages here to see that Mr. Hare has always had troops of friends wherever he was, at home and abroad, friends whom it was an honor to know, and to feel that he was known to them as a gentleman and valued by them as such. There was no patronage on their part, and no suspicion of toadyism on his part. Who some of the most noted of these friends of his were, and what the best society of his time was, is the substance of these volumes, which are as devoid of conceit as of pretence, and which will be found to **sparkle with entertainment."**

The New York Times says:

"The volumes contain innumerable short stories, well told; the book is full of good descriptions of the personality and environment of noted people in all ranks of life with whom it has been Mr. Hare's good fortune to be intimately acquainted, and the life story of this author, like all good biography, will be found of the **utmost interest."**

The Baltimore Sun says:

"It is as the detailed story of the life of a typical Englishman that the book may be valued. But it has a far higher value than the mere relation of acts of one man. It throws a flood of light upon men of the class of the author; it is, therefore, a useful work to the student of society. It is filled with sidelights upon the political movements of three-quarters of a century, and it abounds in rare biographical material concerning men of the nineteenth century. The autobiography has **a three-fold value."**

D. APPLETON & COMPANY'S New Books.

Sirius.

A volume of Fiction. By ELLEN THORNEYCROFT FOWLER, author of "Concerning Isabel Carnaby," "The Farringdons," "A Double Thread," and "Cupid's Garden." Uniform edition. 12mo. Cloth, $1.50.

A new book by the author of "Concerning Isabel Carnaby" and "The Farringdons" needs no introduction. This book is a gallery of vivid miniatures of various phases of English life. Its unfailing interest will increase the author's well-earned reputation.

The Wilderness Road.

A Romance of St. Clair's Defeat and Wayne's Victory. By J. A. ALTSHELER, author of "In Circling Camps," "A Herald of the West," etc. 12mo. Cloth, $1.50.

Mr. Altsheler pictures the most thrilling scenes of the movement for expansion when at the end of the eighteenth century the men of Kentucky and the old frontier were pushing Westward and Northward to gain new territory. A fascinating story of love and aspiration runs throughout the vivid scenes on the frontier and in the wilderness. The winning of the heroine by dauntless courage and self-surrender forms a series of vivid and dramatic pictures which absorb the reader's interest throughout.

The Woman's Book of Sports.

A Practical Guide to Physical Development and Outdoor Recreation. By J. PARMLY PARET. With many illustrations. 12mo. Cloth, $1.00 net.

This is a practical guide by a practical writer for the amateur sportswoman. Golf, lawn tennis, sailing, swimming, bicycling, and basket ball have each their chapters, and the devotee of any of these sports will find here much that will be instructive. It is thoroughly illustrated with half-tone reproductions (all full-page size, with large figures) of instantaneous photographs showing the correct and incorrect methods in the different sports.

Insect Life.

EDITION IN COLORS.

By JOHN HENRY COMSTOCK, Professor of Entomology in Cornell University. New Edition. With full-page plates reproducing butterflies and various insects in their natural colors, and with many wood engravings by Anna Botsford Comstock, Member of the Society of American Wood Engravers. 8vo. Cloth, $1.75 net.

Professor Comstock's book has taken the first place among popular guides to the study and identification of insect life. These colored plates reproduce insects which he has selected and arranged; and the reproduction has been under his supervision. This edition in colors of his authoritative and standard work is necessary for all students of outdoor life.

THE PASSION OF LOVE.

His Letters

By JULIEN GORDON, author of "Mrs. Clyde," "A Puritan Pagan," etc. New edition. 12mo. Cloth, $1.50.

In these brilliant and passionate letters there may be read a revelation of love which will move the imagination and touch the heart of every reader.

"The letters are bound to rank high in the mass of epistolary literature—fact and fiction—which looms in the season's output of the army of publishers."—*Advance Notice in St. Louis Republic.*

The Play of Man.

By KARL GROOS, Professor of Philosophy in the University of Basel, and author of "The Play of Animals." Translated, with the author's co-operation, by Elizabeth L. Baldwin, and edited, with a Preface and Appendix, by Prof. J. Mark Baldwin of Princeton University. 12mo. Cloth, $1.50 net.

The results of Professor Groos's original and acute investigations are of peculiar value to those who are interested in psychology and sociology. The playful manifestations affecting the child himself and those affecting his relations to others have been carefully classified.

Appletons' Dictionary of New York and Vicinity.

An alphabetically arranged index to all places, societies, institutions, amusements, etc. With Maps of New York and Vicinity and Illustrations. Square 12mo. Paper, 25 cents, net.

The 1901 edition of this standard guide contains a number of new illustrations, and a new map showing the rapid-transit route.

The Mystery of the Clasped Hands.

A Romance. By GUY BOOTHBY, author of "Dr. Nikola," "My Indian Queen," etc. No. 298 Appletons' Town and Country Library. 12mo. Cloth, $1.00; paper, 50 cents.

"The story is told in Mr. Boothby's accustomed style of directness, and its interest does not slacken until the last page is read."—*St. Louis Republic.*

The demand for A SAILOR'S LOG, by Rear-Admiral ROBLEY D. EVANS, has been so great that we have been unable to meet it. The FIFTH EDITION is now on press and there will be no further delay in filling orders.

AN EXPERIENCED TRAVELLER and Tutor will travel in Europe and tutor youths during summer. Address TUTORING, care of the *Nation*.

RECENT PUBLICATIONS

The Working Principles of Rhetoric

Examined in their Literary Relations and Illustrated with Examples

By JOHN F. GENUNG, Professor of Rhetoric in Amherst College. A restudied and reproportioned treatise, based on the author's "Practical Elements of Rhetoric." For introduction, $1.40.

THIS book, prepared in the conviction that the study of rhetoric is nothing else than the study of literature on its constructive side, treats these "working principles," not as academic rules of must and must not, but as what they most truly are, those vital considerations, never superseded or outgrown, which govern real authorship in action.

A new feature is the numerous readings, printed as footnotes illustrating the text, wherein are given weighty and pithy remarks by the best authors concerning phases of their art. In this way a notable amount of rhetorical reading of the highest value is made directly accessible.

Composition and Rhetoric

By SARA E. H. LOCKWOOD and MARY ALICE EMERSON, recently Teacher of English in Norwich Free Academy, Norwich, Conn.
(*Ready in July.*)

THIS work is planned to provide a course in English, adapted to the classical and general courses of study now followed in the best high schools and academies. It is logically and naturally arranged, and follows closely the cumulative method of treatment. It is in harmony with the best scholarship on the subject of composition and rhetoric, and is eminently practical and teachable.

Wigwam Stories

By MARY C. JUDD, Teacher in the Lincoln School, Minneapolis, Minn. For introduction, 75 cents.

THIS book is planned for a supplementary reader for the third or fourth grades in grammar schools. Part I gives sketches of the various Indian tribes, their appearance, manner of living, customs, etc. Part II tells of their traditions and myths. Part III is devoted to the Indian of to-day, his condition and his present beliefs.

The book has an additional interest in being illustrated by Miss Angel de Cora (Hinook-mahiwi-kilinaka.)

First Studies of Plant Life

By GEORGE FRANCIS ATKINSON, Professor of Botany in Cornell University, Ithaca, N. Y. For introduction, 60 cents.

IN this new book is presented the really unusual and attractive combination of high scholarship with a rare felicity in writing for young people. The object of the author in presenting these "First Studies of Plant Life" has been to interest the child and pupil in the life and work of plants. Part IV., "Life Stories of Plants," the author has presented in the form of biographies. It suggests that biographies from the plants themselves are to be read by the pupils.

Gil y Zárate's Guzmán el Bueno

Edited, with Introduction and Notes, by SYLVESTER PRIMER, Associate Professor of Teutonic Languages in the University of Texas, Austin. For introduction, 75 cents.

THIS play is the best representative of the modern Spanish drama and offers an excellent opportunity for the study of the literary movement in Spain. Since the edition is intended for advanced scholars, notes have been sparingly used; but the aim is to leave no real difficulty unexplained, and, in the light of the best scholarship of the day, to interpret faithfully the thought of the author.

Edelsteine

Six select stories by Baumbach, Seidel, and Leander. Edited, with an introduction, Notes, and Vocabulary, by RICHARD A. MINCKWITZ, Head of the Greek and Latin Departments in the Central High School, Kansas City, Mo. For introduction, 50 cents.

THESE six short stories have been selected from the very best modern German prose. Thuringia's woodland breezes in Baumbach's writings, Heinrich Seidel's longing for nature and rural happiness among the stone masses of the German capital, and Leander's dreamy fancies cannot but attract attention and awaken interest. The stories are simple, full of humor and pathos, well adapted to high-school reading, and not unsuited for college work.

Frazar Parties Abroad.

Sailings May 16, June 20, July 6. Five carefully conducted parties of the highest standing—fourteen years' experience—visiting England, France (Brittany and Touraine), Belgium, Holland, Germany (Berlin and Dresden), Switzerland, and Italy. For itineraries and references address Mrs. M. D. FRAZAR, 72 Globe Bldg., Boston, Mass.
Arrangements made for girls at a high-class school in Dresden.

EUROPE SMALL SELECT PARTY OF LADIES, SAILING JUNE 19, Three months. England, France, Switzerland, Italy, Germany, Holland, Belgium. Twelfth party. Address
Miss H. M. BARBOUR,
81 Columbia Heights, . . . Brooklyn, N. Y.

The Macmillan Company

Begs to announce Mr. WINSTON CHURCHILL'S New Novel

THE CRISIS

"RICHARD CARVEL," the author says, was written as the first of a series of novels which, while in no sense sequels or interrelated in any way, have a distinct historical sequence as pictures of American life at different periods.

In that book we followed the character of the Cavalier, both in the colonial society of Maryland and the fashionable life of London prior to and during the early days of the American Revolution.

The scenes of **"The Crisis"** are laid in St. Louis, nearly a century later. The heroine of the story, Virginia Carvel, a great-granddaughter of Richard Carvel, serves to connect the stories in interest. The hero, Stephen Brice, is a young New England lawyer seeking fortune in the Southern city.

Among the many characters in the historical setting of the story we meet Grant, a poor farmer—later, the greatest general in the army; Sherman, president of a small street car line—later also a conspicuous and picturesque figure in the history of his time; and Lincoln, a struggling country lawyer—later as President in our greatest national crisis.

To all who followed the fortunes of Richard Carvel, this charming romance of his great-granddaughter should be filled with interest. She sustains most gracefully the family traditions, and in her we can see a nobler, finer Dorothy Manners of the 19th century.

Aside from the narrative, Mr. Churchill has given, with rare skill, a picture of the typical reserved New England gentleman, "fed from within with all the strength of his needs," as opposed to the haughty, brave aristocrat of the South at the time of the Civil War.

His pictures of Lincoln, Grant and Sherman are graphic, as may be noted by the following extracts from letters of Stephen Brice to his mother—

THE CRISIS

Of Lincoln.

"When he saw me, the President rose to his great height, a sombre, towering figure in black. He wears a scraggy beard now. But the sad smile, the kindly eyes in their dark caverns, the voice—all were just the same. I stopped when I looked upon the face. It was sad and lined when I had known it, but now all the agony endured by the millions, North and South, seemed written on it.

"'Don't you remember me, Major?' he asked. The wonder that he had remembered me! I took his big, bony hand, which reminded me of Judge Whipple's. Yes, it was just as if I had been with him always, and he were still the gaunt country lawyer."

Of Grant.

"When the General had finished reading the dispatches, he folded them quickly and put them in his pocket.

"'Sit down and tell me about this last campaign of yours, Major,' he said. I talked with him for about half an hour. I should rather say talked to him. He is a marked contrast to Sherman in this respect. I believe that he only opened his lips to ask two questions. You may well believe that they were worth the asking, and that they revealed an intimate knowledge of our march from Savannah. I was interrupted many times by the arrival of different generals, aides, etc. He sat there smoking, imperturbable. Sometimes he said 'yes' or 'no,' but oftener he merely nodded his head. Once he astounded by a brief question an excitable young lieutenant, who floundered. The general seemed to know more than he about the matter he had in hand."

Of Sherman.

"I think his simplicity his most remarkable trait. You should see him as he rides through the army, an erect figure, with his clothes all angular and awry, and an expanse of white sock showing above his low shoes. You can hear his name running from file to file; and sometimes the new regiments can't resist cheering. He generally says to the Colonel: 'Stop that noise, sir. Don't like it.'"

THE CRISIS

The parting words of Judge Whipple to Brice are characteristic of that striking personality.

"I sent you to Abraham Lincoln—that you might be born again—in the West. You were born again. I saw it when you came back. I saw it in your face. O God," he cried with sudden eloquence, "would that his hands—Abraham Lincoln's hands—might be laid upon all who complain and cavil and criticise, and think of the little things in life! Would that his spirit might possess their spirit!"

The great popularity of "Richard Carvel," 375,000 copies of this novel having been sold, has led the publishers to print 100,000 copies for the first edition of "The Crisis."

The indications are that the first orders will consume the entire stock.

The book has eight charming Illustrations by HOWARD CHANDLER CHRISTY.

In size and style it is uniform with "Richard Carvel." being a 12mo. cloth, gilt top. Price $1.50.

THE CRISIS

The Nation.

NEW YORK, THURSDAY, MAY 23, 1901.

The Week.

Are the Cubans merely innocent, or are they slyly malicious, in their report agreeing to the acceptance of the Platt amendment? Whichever they are, they have left Secretary Root looking uncommonly foolish. All his private assurances to the delegates who went to Washington, all his labored explanations of the intent of the Platt amendment, they have incorporated in the majority report and propose to make a part of the binding agreement between Cuba and the United States! This is accepting the amendment "substantially" with a vengeance. Who is Mr. Root? He is a secretary. He has no more authority to interpret an act of Congress than has Laura Jean Libbey. But, says the Cuban report, he was "authorized by President McKinley" to bind the United States to a certain interpretation of the Platt amendment. Then, we ask, who is President McKinley? He is an executive of the law, not its interpreter, an official here to-day and gone to-morrow, one who has made it plain that his promises do not bind even his own Administration, and who has not the slightest power to fetter the action of his successor. Yet these men assume to speak for the United States, and the Cubans think, or pretend to think, that their words are law!

"It is understood," say the Cubans gravely, on the strength of Secretary Root's confidential explanations, that any intervention in Cuba under the Platt amendment "shall always be the act of the United States, and not of isolated agents." What is an act of the United States? If it is a law of Congress, signed by the President, do the Cubans imagine that any such formality would be waited for if an occasion for intervening arose? Suppose an American syndicate in Cuba should get up a riot or be attacked by a mob, and call upon the President to intervene, would he wait to summon Congress in extra session? We trow not. He would promptly send troops, and point to the Platt amendment for his authority. And that would be his authority of law, against which all these "understandings" of Mr. Root and the Cubans would not avail for a moment. And who are the "isolated agents" that are never to lift a finger? No man knows. If Mr. McKinley should shut himself up in the White House, he would come under the definition of an isolated agent, but he would act, and act quickly, if the need of intervention arose. And how can there be that kind of intervention which Secretary Root made the guileless Cubans think was alone contemplated—an intervention which would not at all "interfere with the Cuban Government"? How can you assert supreme authority in any country, and yet not interfere with the supreme authority? It is all such gammon that it looks as if the Cuban report had set out deliberately to make Mr. Root ridiculous.

The minority report, however, is, if possible, still harder upon him. It includes a solemn undertaking by Cuba to "help the United States enforce the Monroe Doctrine." This is really an insult; but Secretary Root exposed us to it by telling the Cubans that the Monroe Doctrine is not recognized as a part of international law, and that, therefore, we could not make it the basis of Cuban independence of foreign Powers. As a matter of fact, we have always done so, and, international law or not, we have always asserted our determination to maintain the Monroe Doctrine in the face of a world in arms. But now we find it among the things which Secretary Root gave away (including himself) in his efforts to wheedle the Cubans into accepting the Platt amendment. So we suffer the humiliation of having 1,500,000 Cubans, without army or navy, generously coming forward to "help" 76,000,000 proud Americans to maintain their fixed national policy. It is high time that the shades of the immortal Monroe paid a visit to the War Department.

The *Times* feels confident that Secretary Root did not tell the Cuban Commissioners that the naval stations of the United States in Cuba would never be used as vantage points of intervention. "Nor," it continues, "did he [Root] give them any explanation or interpretation of the law save to point out its plain meaning." This raises a question of veracity. The report of the Commissioners recites in detail certain promises which Mr. Root gave them verbally. In order to make a permanent record of them and to hold the United States responsible for them, they propose to have them added as an appendix to the Constitution of Cuba. Is it probable that these high officials invented the promises which they say that the American Secretary gave them by the authority of the President? At all events, nobody's denial that he gave them will be accepted except his own. If he allows the record of the Cuban Commissioners to go uncontradicted, it will pass into history as it now stands.

Whether or not it is "the first time in the world's history that the invaded have begged the invaders to remain on their soil," no American could read in Tuesday's dispatches the tribute of all classes in Pekin to our retiring army, without a thrill that the Chinese imbroglio has rarely evoked. The wise moderation of our diplomatic policy and the admirable conduct of our officers and the soldiers on the spot have been the occasion of much misunderstanding, and even of indignant protest, on the part of some of the other Powers. It is enough that our troops carry away from Pekin the good wishes and regrets of those whom they have temporarily governed. All this is matter for unqualified congratulation, and Provost-Marshals Major Robertson and Capt. Tillson have won as honorable a name as can be gained in reckless charge or desperate escalade. It would be easy to misconstrue the situation, to argue that since our temporary rule has been beneficent to the Chinese, we have assumed a responsibility that we may not with honor put off. How little can such a sophistry stand before the brave and friendly reply of Capt. Tillson to his two thousand memorialists:

> "The United States does not maintain an army for the purpose of furnishing the city of Pekin with good municipal government, and as a business proposition your appeal for the United States forces to remain longer in Pekin has little to stand upon."

These will be hard words to many, and Capt. Tillson himself felt impelled to hint at "broader principles of humanity" which might delay his departure. But the broader principle is more likely to require that the Chinese work out their destiny in the Chinese way than that they should continue under European tutelage, at their own expense.

Minister Conger said, with much force, in his speech before the Asiatic Society on Thursday night, that it is necessary to clear our minds of the notion that a great trade is to be had in China for the asking. Some persons seem to think that an open door to the commerce of 400,000,000 people means the immediate sale to each benighted Chinaman of a suit of clothes, a piano, and an automobile. Unfortunately, the statistics of Chinese trade, for a half-century back, negative these golden dreams, and show only a small though steady advance in foreign commerce. What else is to be expected in dealing with swarming millions who have, judging by our standards, neither wants nor resources? The well-known French institution, the Crédit Lyonnais, has been for several years carrying on an expert investigation into the possibilities of Chinese trade. It sent out technical agents and employed skilled merchants,

who gathered together a great mass of valuable and probably unique material. Now what was the answer drawn from it as to the question whether the commercial openings in China would, within a reasonable time, justify the founding of a Chinese branch of the Crédit Lyonnais? It was an answer clearly in the negative. This conclusion is one in which a man of such old experience in China as Sir Robert Hart agrees. At the same time he and the others who know most about the subject are confident that in cautious and judicious ways a large and profitable Chinese trade can be built up.

President McKinley assured the San Francisco workingmen on Saturday that all his public life had been devoted to effort to "give the workingmen the best opportunity, the best chance for good wages and steady employment." But is his present effort to invade foreign markets consistent with the desire for such good wages? Not if what he said in 1890 is true. He then laid down plainly the only conditions under which, in his judgment, we could "invade the world's market." There would have to be, he affirmed, with that beautiful lucidity just extolled by Senator Hoar to the Home Market Club, a "levelling down through every channel"; "our habits of living would have to be changed"; "our *wages cut 50 per cent.* or upwards"; "harsher conditions and greater sacrifices would be demanded of the masses." "With me," added the introducer of the McKinley Bill, "this is a deep conviction, not a theory." Who would have expected that scholar to be going up and down the land in less than eleven years, preaching the urgent need of foreign markets? If he was right then, he is wrong now. We believe, it is needless to say, that he was wrong then and is right now. His present mistake, however, is to refer to his past record in such matters. It contains awful artillery enfilading his position of to-day. But then, we know that politicians of a certain class will never get over a readiness "life-long convictions to extemporize."

The people of Buffalo are to be congratulated on the formal opening of their great Pan-American Exposition on Monday last. They may, with entire confidence, appeal to the country for support of their undertaking, not only because the Exposition offers to the individual a large return for a comparatively small outlay of time and money, but because it is a display of public spirit worthy of hearty encouragement. This Exposition surpasses its predecessors in several important respects. Throughout the grounds the limitation of space has generally resulted in a very careful selection of exhibits. Then, too, the Federal Government, profiting by its experience in former expositions, and availing itself of material acquired in the Spanish war, has made its exhibit more attractive than ever before. The recent remarkable developments in the construction of vehicles of all kinds gives the exhibition in the Transportation Building great distinction. The electrical display, for which the power is supplied from Niagara, is likewise unrivalled. But more interesting, perhaps, than anything else, is the special collection of products from the whole continent, an ocular demonstration of the enormous variety and richness of the resources of the two Americas. And the Exposition includes not merely the products of the soil and the mechanic arts, but of the fine arts as well. Most visitors, however, will carry away, not so much a memory of individual features, as a general impression of the buildings and grounds. Some of the best architects of the country have been employed, and they have been eminently successful. In a space a mile long by half a mile wide, they have arranged buildings, lakes, canals, gardens, and lawns in a beautiful and harmonious whole. The scene at night, when on every building the principal lines of wall, roof, and decorations are brought out in rows of incandescent lamps, is one of marvellous splendor.

The news from Washington that Secretary Hay is inclined to look more favorably than heretofore on the Panama Canal, will be received more calmly now than it could have been at any former time in the growth of public opinion on the Canal question. The Hepburn bill, which passed the House while the Canal Commission was still at work on its survey, was not the result of any matured opinion on the merits of the two canal projects, or on the Hay-Pauncefote treaty, or on any rational motive under the sun. It was an explosion of gas that had been accumulating for a quarter of a century. The force of the explosion has been largely dissipated, and a time has come when we can approach the subject with something like an open mind. Hitherto it has been assumed that the Panama Canal, being a French project, was hostile to us, and must, therefore, be thwarted at every opportunity. Even the bankruptcy of the Lesseps Company did not satisfy us. We wanted to have punishment visited upon the Panama concern after death, and this feeling of animosity contributed its quota to the vote for the Hepburn bill. Now that the fumes of the outburst in Congress have passed away, there is a chance to see the real merits of the question, and it is facilitated by the offer of the Colombian Government to put us on the same footing at Panama as Nicaragua offers us in her territory. The people of the United States, who are to pay the bill, have to ask themselves only the question which route is the best, the cheapest, the quickest of attainment. Granted that we can have our choice on equal terms as to ownership, title, control, which of the two would a syndicate of capitalists elect to put its money into?

The violent strike of street-car men at Albany has been settled, the union having yielded the main point at issue. Naturally and properly, these grave labor troubles have revived discussion as to the feasibility of adopting some system by which similar difficulties may be avoided in future. Every year makes it seem more intolerable to the public that a great system of transportation should be disturbed, and the convenience of a whole city interfered with for days, and even weeks, because a controversy over terms of work has arisen between employers and employed. Popular feeling is strongly in favor of arbitration, and a voluntary recourse by both sides to that way of settlement is always hailed with enthusiasm. But this is sometimes out of the question. In the Albany case, for example, it was simply not to be thought of that the employers should admit the slightest doubt as to their position on the fundamental demand of the employees—that several faithful and satisfactory men should be discharged because they refused to join the union. The managers of the company would have been false to their duty as citizens if they had consented to arbitrate such a question—it would be like arbitrating the issue whether a man accused of no crime has a right to life and liberty.

A mass meeting was held in Cooper Union on Thursday evening to censure the Court of Appeals for two decisions which are construed to be inimical to labor. One of the decisions was on the Prevailing-Rate-of-Wages Law, the other on the State Stone-Dressing Law, both of which were held by the court to be unconstitutional. The usual speeches were made in denunciation of the judges as the tools of capital; and those who took part in the meeting exhorted each other to see to it that better men are elected to the bench hereafter. As there happened to be a strike and a riot going on at Albany, where the Twenty-third Regiment, a Brooklyn organization, had been called into active service, a large part of the wrath which had been bottled up for the judges was discharged at the soldiers. They were called whipper-snappers, counter-jumpers, and various other names of ignominy. It was assumed by the speakers that they had gone to Albany to shoot down the strikers at the instance of capitalists, and in the service of oppressors of human kind, and because they liked that kind of sport. But everybody knows that they went in obedience to the law of the State

and to their oath of duty, and that they went against their private inclinations.

While there is nothing disquieting in the resumption of gold exports from New York to Europe, the circumstances offer a good deal of curious interest. It is pretty well understood by this time that New York is at present a centre for international redistribution of gold, in much the same way that London has long been. We ship gold to France or England either because we have more balances on hand than are just now needed, or because the European markets need them more than we do. If we could not spare this gold, we certainly should not send it. There is, however, a somewhat unusual combination of events which has served to facilitate the movement. To begin with, our New York bankers lately bought $50,000,000 worth of consols from the British Exchequer, and these are being paid for. Then, in connection with the recent "corner" incident, extremely heavy purchases have been made by New York of London's Northern Pacific holdings. Finally—and this is no doubt the more immediately important influence—Paris bankers have underwritten an $80,000,000 Russian Government loan, and are recalling their credit balances for the purpose. Probably this situation alone would not have affected us, because this country owes little or nothing to France on balance, while Paris has plenty of European credits of its own. But the very fact that these Paris balances—many of which had been loaned out in the London market—are now being called in, has naturally caused a void in the Lombard Street supply, which American capital is quietly filling. As might have been expected, the gold movement is arranged by shipment direct from New York to Paris. By this means, Paris credits London with the payment of the recalled French capital, and London credits New York with the requisite new advances.

One fact in the general financial situation was conclusively proved by the recent Northern Pacific corner. Whatever else might be argued or denied regarding the incident, it indicated beyond dispute the existence of an unparalleled amount of capital, subject to the immediate demand of bankers. An operation involving the acquisition not only of $80,000,000 common stock, but also of the greater part of $75,000,000 preferred, speaks for itself on this point. The conclusion suggested by the virtual corner of last week's Chicago corn market is exactly similar. Corners in grain usually result from a sudden and unexpected deficiency in supplies, as a result of which contracts for future delivery, based on a different expectation, become impossible of fulfilment. In such case, the operator holding even a limited share of these cornered contracts may exact what terms he pleases. Something like this occurred on the New York market, after the corn crop failure of 1894. Until midsummer that year the crop had promised well; but the blight of July and August destroyed more than one-fourth of it; contractors could not "cover," and the New York price had by September risen from 45 to 65 cents per bushel.

The present crop position, however, is not at all analogous to that of 1894. There was no failure or deficiency in the last corn crop season; the actual yield was in fact the largest in four years, and the fourth largest in our history. As for the crop of 1901, that is as yet hardly planted. Even the so-called "visible supply" in American storehouses stands at seventeen million bushels, which is larger to-day by 1,100,000 bushels than it was a year ago, when corn sold for barely half as much per bushel as it brought on May 15 at Chicago. Yet Mr. Phillips's Chicago "corner" appears to have been as complete in its way as any in the history of the trade, and he has been able to ask his own price from the unhappy "shorts" for refraining from driving them into bankruptcy. In this instance, as in the Northern Pacific corner, the immense amount of capital at the command of the operators engaged is really the most striking phenomenon of all. It is merely another index to the abnormal disparity which has for so many months existed between the supply of American capital and the field for its investment. Considering what the results of this excess have been, it is fortunate that, with the enormous new issues of railway securities impending on the market, this position is likely soon to return to equilibrium.

A decision of the Supreme Court of Ohio, sustaining the old Civil-Service Commission in Columbus, and ousting the new Commission appointed by the new Democratic Mayor of that city, is a gratifying triumph for the merit system, and for decency in politics. Mayor Hinkle had removed the Commissioners without even the formality of preferring charges against them, and merely because, as he afterwards explained, of a difference of opinion between them and himself over the construction of a statute. His action violated the spirit, if not the letter, of the law creating the Commission, which provided that the term of no more than one member should expire within the same year. This was undoubtedly intended to make it impossible for a new Mayor immediately to appoint a Commission of his own choosing, and Mayor Hinkle's disregard of this wise provision was generally construed as having been dictated by the Democratic office-seekers, who have long been hungry in Columbus. The court's support of the Commission should strengthen its hands for the enforcement of the law.

The first session of the Legislature of the Territory of Hawaii does not appear to have done much to raise island politics to a higher plane. Horse-play, squabbling, dawdling, and inefficiency seem to have been the chief marks of the legislators. They closed the legislative term at loggerheads with Gov. Dole, whom they vainly urged to extend the time of the regular session. In an official communication to the Senate, he plainly told the members that they had been "wasteful, both of time and money," and that he would do no more than call a special session, for the passage of the neglected appropriation bills, and for that purpose only. In reply, the angry legislators are sending on a petition to Washington, asking the President for the removal of the Governor. But wherein he did not do his exact duty is not evident. If it comes to removing, the Legislature itself would furnish a shining mark. Undignified conduct and persistent obstruction of the public business certainly do not entitle it to read lectures to Gov. Dole.

The English Army Bill passed its first reading by a good majority on Thursday night, but this is far from making it certain that its final enactment into law in its present form is assured, or that, even if it is, there will result the actual regiments and armament which Mr. Brodrick has written down on paper. He himself, in explaining and defending his bill, had to admit that there were grave doubts if enlistment would fill up his skeleton army. Capt. Lee, the English officer who was with our troops at Santiago, has criticised the Government scheme for raising a volunteer army, writing especially to the point that, as compared with the American method, the pay offered is not high enough. Recruiting officers are really to go out into the labor market, yet are not able to bid anything like the market wages. The last *Punch* has a cartoon showing an artisan and a farmer's lad very indifferent to the King's service unless it were made "worth their while." As for Continental opinion respecting English army reform, we suppose that it was pretty accurately expressed by Marshal Ratzenhofer of the Austrian army, when he said at Vienna, speaking of the revelation of English military weakness: "What will England do? Simply nothing. The same as it did after the Crimea, the Indian mutiny, the Afghan war—nothing. A nation like the British is too deeply imbued with its political constitution, especially in its relation to the army, to exchange its character. Minor collateral changes there may be, but there will be no thought of conscription."

LODGE'S MONROE MADNESS.

If we did not know that men with an obsession find every occasion a fit one for airing it, we might be surprised at Senator Lodge's speech at the opening of the Pan-American Exposition on Monday. What he did was to convert, so far as in him lay, a great exhibition of the industrial and peaceful arts into a general hurling about of threats and firebrands and death. President McKinley's telegram of greeting expressed the hope that no cloud would rest upon the "festival of peace and commerce," and that the exhibition would prove that our prosperity is "fruitful of nothing but good to our elders in the brotherhood of nations." Not so Lodge. He had but the most perfunctory words about trade and commercial expansion, and warmed to his task only as he grew warlike. To him the chief "message" of the Exposition, as well as "our highest hope," was that renewed and formal notice should be served by it upon Europe that we are more than ever determined "jealously to maintain the doctrine of Monroe"!

Putting aside his shocking perversion of time and place, we have to ask whether it is the Monroe Doctrine which Senator Lodge is maintaining, or something of his own invention. We have before remarked in his speeches that "charm of perpetual novelty" which was said to exist in Lacordaire's sermons—and for the same reason, that the speaker invented his own history and theology as he went along. His latest Monroe novelty is to the effect that Germany is not to be allowed to acquire a coaling-station anywhere on this hemisphere. That is not his explicit language, but that is what he means. His words are: "We cannot—we will not—permit any great military Power to enter this hemisphere, settle down by our firesides, . . . and from some point of vantage offer an eternal menace to our peace." So much for the threat to Germany; now for the threat to Venezuela: "Under no conditions, under no stress of circumstances, can the smallest island or the most barren promontory on either continent ever be ceded or sold [or even leased, he said in another sentence] to one of the great Powers of Europe." We say clearly Germany and Venezuela, since no one can doubt that what Lodge is driving at is the reported effort of the German Government to lease a tiny island off the coast of Venezuela for a coaling station. It is certain that the Senator's defiant words will be at once telegraphed to Germany, and will furnish to the Berlin *Post* one more example of that "Imperialistic fanaticism" which it thinks is now regnant in the United States.

Is there anything in the Monroe Doctrine, except as Lodge slips it in, which would prevent Venezuela from leasing to Germany a barren island for a coaling station? Not a word. "Interposition for the purpose of oppressing or controlling" was the thing President Monroe could not allow European nations to attempt in South America. But to pay good money for the use of an untenanted rock in the ocean, with the entire consent of the owner, is neither oppression nor control. If the growing needs of German commerce, and the convenience of her cruisers, make it worth while to dump a lot of coal on an island in the Caribbean Sea, the Monroe Doctrine gives us no more title to object to it than does the Kantian doctrine of space and time. And why should a foreign coaling station thousands of miles from us—Lodge's "fireside," we know, is in the tropics, but the rest of us are more at home further north—be an "eternal menace to our peace"? Is our own coaling station off the Mexican coast a menace to the peace of Mexico? Are we not ourselves the ones who are menacing, if, with Lodge, we say to Venezuela that she shall not do what she will with her own? Senator Lodge correctly states the Monroe Doctrine as guaranteeing the "absolute independence" of the South American republics. But how can they be absolutely independent if forbidden to sell or lease an island off their shores? Yet Lodge tells them they cannot do it. One would like to know, however, his authority for going counter to a genuine part of the Monroe Doctrine with a fraudulent version of it drawn out of his own hat.

The Massachusetts Senator seems sublimely unconscious of the terrible discrepancy between his words and his acts. He appeals to the Monroe Doctrine. What was that, in its essence, but a protest against a colonial policy? The American continents, said the famous message of 1823, were not to be considered as subjects for "future colonization by any European Power." The emphasis was not more upon the word European than upon the word colonization. It was government at a distance, rule arbitrarily imposed across the ocean, that was the offensive thing. Exactly this was the contention of Secretary Olney in his Venezuelan correspondence with Lord Salisbury. The Monroe Doctrine, he said, looked to the "unnatural" government of a people by another people 4,000 miles away. With what a fine grace, then, does Senator Lodge appeal to this Doctrine, at the very moment that his own country, he leading the way, is imposing an "unnatural" and arbitrary rule on a people 7,000 miles away! The consistency of this is as gratifying as is the assertion that a naval station is an eternal menace to our peace, made by a man who is telling the Cubans that the naval stations which we mean to extort from them will be the sure bulwark of peace.

Senator Lodge is a dangerous man simply because he has made himself the spokesman of those people in this country who, with Hamlet, consider their thoughts nothing worth unless they are bloody. He broods upon war. He cannot address the most peaceful gathering, like the Home Market Club, without calling to arms. For mere commerce, for industrial triumphs, he cares not a straw. He was chief mischief-maker in bringing the canal treaty to wreck, and what he thought of the great exporting interests of this country he showed when he defeated the French reciprocity treaty, at the behest of a manufacturer of bogus jewelry. The only serious national occupation he considers to be war. The old legend of the fiend who tore his master in pieces for lack of employment, seems to be his principle of political action, and he means to keep the people occupied with war lest they tear him in pieces. The course he urges he knows as well as the next man to be folly, but he probably thinks, as Guizot said of France, that the nation is capable of any folly, provided it be a military folly. This leading and ambitious Republican Senator, this misrepresentative of educated and industrial Massachusetts, this stirrer up of international hatred and strife, is evidently a man that President McKinley will have to keep his eye on if he does not want his policy of peace and trade with all nations tumbled into ruin.

MR. BRYAN ON STOCK GAMBLING.

When Mr. Bryan started his weekly newspaper, there was a wide curiosity to see what views were held by a man who had been twice nominated by his party for the Presidency, and who had made a stout campaign in both instances. As the weeks passed by, however, the interest in his sayings fell off, and it has now dwindled to almost nothing. This decline in the attractions of the *Commoner* is due, in part, to the belief that the Democratic party will not nominate him for President in 1904, and still more to the fact that there is very little in his newspaper that is worth a serious man's attention. Finance has been Mr. Bryan's strong hold on his followers in the West and South, yet this is the weakest part of his equipment. His speech on the cross of gold and the crown of thorns at the Chicago Convention in 1896 undoubtedly gave him the nomination which was really due to Richard P. Bland, and would probably have gone to the Missourian if the delegates had not been swept off their feet by the outburst of the Nebraska orator. But the cross of gold and the crown of thorns would not bear a five months' investigation before the people. So Candidate Bryan went up like a rocket and came down like a stick. His second nomination was not due to any views he held on finance, but was rather in spite of them. It was the result of sentiment rather than of prin-

ciple. Now the sentiment has died out, and there is no principle left on which to build a new political edifice. The silver question, as a party issue, is "as dead as Julius Cæsar." It is doubtful if the Democratic party in a single State, except those where silver-mining is an important industry, would now accept the plank which Mr. Bryan caused to be put into the last national platform on that subject. In fact, several of the Southern delegations took it with extreme reluctance last year.

Mr. Bryan himself has been very mum on that subject since the campaign ended, but he has been casting about for some other issue in the field of economics. The subject of Trusts has been much in his mind of late, and he finds the recent panic in the stock market a very good text to preach upon. In last week's *Commoner* he says that the record of Wall Street's doings is "an indictment against our boasted civilization," and that it is a reflection on the intelligence of the country and on the conscience of the people. Continuing in this vein, he says:

> "It is little less than amazing that a few men should be permitted to corner the market for their own selfish purposes, beat down the price of one stock and boom the price of another stock, demoralizing business and jeopardizing the interests of all classes of society. How will the historian describe an age in which a petty thief is severely punished while great criminals go unwhipped? It often takes an object-lesson to arouse the people to the evils of a bad system, and the recent fluctuations in the stock market, costly as they have been, will be cheap if they lead to legislation which will put an end to stock gambling, erroneously described as 'business.' "

No doubt Mr. Bryan here reflects the opinions of a great many people. No doubt the panic on the Stock Exchange made a strong impression on the public mind prejudicial to the groups of capitalists who have combined, in one way and another, to stifle competition in railroads and manufactures. Yet in framing an indictment it is not safe to deal in generalities. One must offer particular facts, and present them in such shape that the court and jury can separate truth from falsehood. What was there in the recent stock panic to warrant the belief that certain persons were "cornering the market for their own selfish purposes"? All the facts are opposed to that contention. The men who bought the stocks did not want the market to be cornered. They wanted the stock, not differences in the price of it. A corner was directly contrary to their interest. When it developed that the stock they had bought could not be delivered, they were chagrined and disappointed, because they had loaded themselves down with shares at a high price which might not, after all, secure the control they were aiming at.

Again, how were these men "demoralizing business"? Presumably Mr. Bryan means that they were tempting the unwary to join in a stock gamble. If their action had this effect, it was contrary to their intention. The joining of the general public in the rush for stocks simply put up the price on themselves, forcing them to pay more for the property than they otherwise would. Evidently the *hoi polloi* made more money than they lost. We oftener hear of losses than of gains in such a mêlée, but it stands to reason that if a stock like Northern Pacific, which was pretty widely held before the struggle for control began, was rushed up from 85 to 150, with occasional spurts as high as 1,000, and has settled down in the boxes of two groups of capitalists, the previous holders must have pocketed the difference. The men who lost in the gamble were the short sellers, but these were not the public. They were the professionals of the Exchange who were not in the secret of the upward movement. The great mass of dabblers in stocks buy only for a rise, and these evidently have nothing to complain of. Stock gambling may be as bad in morals when the *hoi polloi* win as when they lose, but it does not serve quite so well to win votes for the moralists. Public sympathy is aroused only for the losers.

Mr. Bryan looks forward to legislation which will put an end to stock gambling as a result of the recent fluctuations in the market. We confess that we do not see any such tendency on the surface of public opinion. The people who resist the seductions of the stock market and attend to their own private business, are not concerned to put an end to the buying and selling of securities at public vendue; while those who occasionally dabble in stocks do so on account of the fluctuations in price. If there were no fluctuations on the Exchange, they would not be there at all.

THE ENGLISH LIBERALS.

It is to Mr. Balfour, we believe, that we owe the vamping of an ancient witticism. "Yes," he said to a Liberal friend, "you have really a splendid party. All that you lack is an issue and a leader." In search of both, or in confession that they have neither, the Liberals last week held a three-days' convention at Bradford. The main cry was party unity. Divisions and heart-burnings among the Liberals have been notorious since 1895. The resulting paralysis of the Opposition has been a cause of regret to thoughtful Conservatives. Only the other day the Chancellor of the Exchequer was deploring it to some depressed Liberals. "But I will tax you into unity," added Sir Michael cheerfully. He has not yet done it, however. John Morley and a few Liberals voted even for the coal tax. It and the sugar tax and the increased income tax are producing a certain amount of discord among the Conservatives; but they do not heal the differences of the Liberals.

The old personal bitterness between Liberal leaders has largely disappeared. Lord Rosebery and Sir William Harcourt are no longer at daggers drawn. Yet neither is in a position to command Liberal harmony and enthusiasm, even with the hearty support of the other. Sir William is too old and too tactless to be thought of as the leader whom the party requires. Lord Rosebery is too uncertain, both of himself and of his policy. He spurted up in momentary activity at the time of the last general election, and made much of a programme of "sane" and "Liberal" Imperialism. To exemplify it, he put up at Newcastle Capt. Lambton, the naval hero of the siege of Ladysmith; but that gallant officer was badly beaten at the polls, and since then Lord Rosebery has sought the consolations of literature. Nor is there any other real leader on the horizon. Sir Henry Campbell-Bannerman has done very well in the thankless task of leading a disorganized Opposition in the House of Commons; but no one thinks of him as the man to weld the factions together and recreate a spirited and triumphant Liberalism. Sir Edward Grey and Sir Henry Fowler are able and respected men, either of whom might come in for the reversion of the Liberal leadership some day; and Mr. Asquith has great talent and personal force, which would pretty surely carry him to the front if the radical and social-reform wing of the Liberals were to become dominant. But all these speculations about who the leader might be are only another way of confessing that no leader exists. Lacking a Gladstone, with his indomitable and infectious energy and high moral enthusiasm, the Liberals are not likely to take their leadership out of commission for some time to come.

A man would arise if there were a clear and burning issue, but unfortunately there is not. Except in petty details, the policy of the Liberals is not essentially different at present from that of the Conservatives. Both are pledged to see the Boer war through; both are for an enlarged army; both are for the increased taxes necessary to foot the bills; both are agreed that social legislation must wait till there is money in the public purse to pay for it. Of course, the Liberals go through the motions of an Opposition. They find fault, they attack the Government, they offer amendments, they stand up to be counted and cheer loudly when the Ministry's majority falls below the normal, as it has done many times of late; but all that brings them no nearer power. Yet the Government show many signs of weariness. The Ministry seems certain to be reorganized soon. An alert and hopeful Opposition, with a dashing leader, could probably drive the Tories

out of office in a few months. But as it is, the last thing the Liberals really desire is power. They would not know what to do with it. Thiers said in 1832: "Providence must have abundant confidence in me, for every time I arrive at power it seems to reserve the most embarrassing affairs for me." But the English Liberals do not share that simple faith. They would much prefer to leave the present embarrassing affairs in the hands of the Conservatives. If Balfour were to-morrow to offer to resign and let Campbell-Bannerman take charge of the Government, that pawky Scotchman would decline with thanks.

The truth is that the war and the war spirit have been too much for the Liberals. No more than any other party in any other country could they even appear to oppose a foreign war, or to embarrass the Government in its prosecution, without falling into popular disfavor. Political opposition always becomes, *inter arma*, half-hearted. There is Mr. Brodrick's Army Bill, for example, now under debate. How do the Liberals attack it? Do they denounce its underlying policy, cry out against the military burdens it will impose, come out squarely for a programme of peace with all nations and social betterment at home? No; they do not dare to do any of these things, even if they want to. They simply arraign the Army Bill as an ineffective measure. As to its aim they have nothing to say. To that they agree. But a party that fights over mere details cannot win victories. It takes principles and great issues to overturn a Government. To formulate such, many attempts will no doubt be made—as at Bradford so in the Liberal press; but in the present state of opinion they can amount to little more than pious hopes. The Boer war still has both English parties by the throat, and, till its grip is relaxed, there is little likelihood of any party change. The Liberals may denounce Chamberlain, and the old Tories go on secretly hating him; but as long as "Chamberlain's war" and its sequel hold the centre of the political stage, he will retain a free hand to "ruin his country with consummate ability," as was said of Cavour.

INTERNATIONAL PUBLIC OPINION.

Several Frenchmen eminent in literature and learning have lately given their names to a public protest against the repressive measures adopted by the Russian Government in dealing with students and writers. The movement, it seems, had its initiative in a "Committee of University Solidarity," and the *Aurore* newspaper has published the letters of an imposing array of French authors and professors. Their act is one requiring unusual courage in defying public odium, with the Russian alliance meaning what it does to France in these days. But Zola and Anatole France, Élisée Reclus and Professor Havet and the others, rise above all narrow or merely national considerations, and appeal to the universal conscience. To them the sight of a Government attacking reason and science in the persons of Tolstoi and Gorki and the university youth seems a spectacle, wherever beheld, to evoke a cry of indignation. Those who suffer under such tyrannical methods are an "honor to humanity," and entitled to receive at least the "homage of our grieved admiration"; while the educated world, as M. Claretie writes, should make the Czar know its conviction that "the sovereign who has nobly dreamed of universal peace ought to love justice and to grant liberty."

There has been within the past few years more than one such assertion of the moral sense of the world, leaping over the boundaries of nations. The French themselves had their own chalice commended to their lips throughout the long-drawn torture of Dreyfus. Against that injustice, wrought under the forms of law, the conscience of the civilized world offered a solemn protest in volume like the sound of many waters. Similar outcries have been heard in connection with the Russification of Finland. The Dutch professors issued their appeal to the university world, asking it to judge righteous judgment in the case of Chamberlain vs. the South African republics. That the condemnation by enlightened foreigners of our own course in the Philippines has not been expressed in an organized way, may be due to the fact that they saw that liberty and good faith were not left without witnesses in this country; that our own men of clear conviction and undaunted courage did not shrink from telling the truth without fear or favor; and that our own university men, our own satirists, our own poets saved others the necessity of telling us what a curse of inconsistency and cruelty will rest upon us

—"save we let the island men go free."

Now, the one clear truth which emerges out of all these scattered facts is that we are getting to have an international tribunal, none the less august for being unofficial, before which national criminals are haled and by which they are judged. The educated world everywhere more and more feels its solidarity. One touch of science makes the whole world kin. And with this identity of privilege, this commonalty of light, goes a feeling of responsibility. There is developed a *sensus communis* in public morals which will not let men sleep or be silent when base deeds are done by any nation in any part of the earth. It may be that there is often a great deal of misunderstanding and intolerance in these protests against national wrongs. We may in this, too, compound for sins we are inclined to by damning those we have no mind to. But, allowing for the fallibility of these judgments, we must yet admit that there is coming to be an instructed and sensitive international public opinion, which is a new thing in the world, which promises to become more highly organized and swiftly responsive, and which should be and will prove a wholesome terror and restraint to the tyrannous and faithless among the world's rulers.

It is a happy aspect of our modern cosmopolitanism. Nothing can any longer be done in a corner—not even murders of state committed, or a nation be set hideously at war with its past. In the world made a huge whispering-gallery by the press, all these things are sounded in all ears. Thus it comes about that a public man in any land knows that he must reckon, in the long run, with a public opinion more extensive and powerful than that of any one land. When tempted, for a reason of state (that bottomless abyss, as Clarendon calls it), to crush the weak or rob the helpless, he is conscious that he must consider more than the immediate political result. He cannot order students flogged in the streets with lead-weighted whips without asking himself, "What will they think of this in Paris? How will this be regarded in the universities of the great world?" He cannot entrap and destroy a race in South Africa, and be content if only his reputation in Birmingham be as great as ever, if only his Parliamentary majority remain secure. These things do not touch that international verdict before which he well may cower. And if his ambition or his complaisance leads him to attempt to make the metes and bounds of his country greater, but her fine sense of honor and of justice weaker, then it will be to him, in the end, a small satisfaction that the mob approved, that the election was carried, that self-seeking adulation became more fulsome than ever, if all the while he knows that the educated moral sense of mankind is adding the words Philippines and Cuba to the historic list of names which stand for national greed and cruel breach of public faith.

We thus see in the making an international force more powerful, in its way, than treaties, more effective than tribunals of arbitration. Without visible machinery, without agents of justice, sentence is pronounced upon highly placed malefactors, and national outrages are passed in review. It is a kind of automatic and ineluctable moral power. It seems destined to wider influence as the minds of men are ripened, and to become a true international court of last resort.

NATIONAL THEATRES.

Ever since somebody started the report that Mr. Andrew Carnegie was about to establish an endowed theatre

of some kind in this country, or in England, or in both, the subject has been discussed not only by actors anxious for advertisement, and by the vast and modest army of unappreciated playwrights, but also by disinterested and capable students of the drama, who realize the potency of the civilizing forces latent in the stage and are eager for their development and employment. As might be expected, almost every advocate of a national theatre has his own particular notion of the manner in which it ought to be conducted, but in the main they all agree that it should be devoted to the representation, in the most perfect imaginable manner, of the masterpieces of dramatic literature, old or new, and should be at the same time a conservatory of the best traditions and a training school for the Rosciuses and Garricks of succeeding generations.

In all of these schemes the "endowment" is apt to figure as the one essential preliminary, as if the gift of a sufficiently large check would dissipate all existing difficulties, and call into instant existence the ideal playhouse, repertory, players, policy, directors, and everything else complete. Now, the fact is that the endowment is not the first thing needed, but almost the last. Without doubt it would be pleasant and encouraging to know that a fund of a million or two was lying in readiness to meet every financial emergency, but the assurance of it would probably frustrate the very object for which it was intended. Wholly aside from the question —a grave one—as to whether art would flourish without the stimulus of competition, it would be obviously absurd to build a national theatre, to discharge the functions of a dramatic university, without first making sure of a faculty capable of directing it, a company fit to act in it, and, which is also important, a representative audience to profit by its exhibitions. An enterprise of this kind, to have any chance of success or honor, must be reared upon solid foundations and from small beginnings. First, a body of good actors must be formed to furnish the teachers of the future; and then, when a new and vital public interest in the theatre has been aroused by fresh and vital performances of the better sort of plays, but not till then, will it be time to settle the details of the site, the form, and the directorship of the institution which is to be the centre, the heart, and the inspiration of the theatrical art of the country.

Perhaps the day for laying of the foundation-stone may not be so far distant as it now seems to be. There are some faint signs, delusive, perhaps, but promising, of a revival of the drama in England; and any quickening of the spirit there would soon be reflected here. While other folk have been talking of the need of a national theatre, Mr. Frank R. Benson has been doing his best to supply one, and has been successful, at least, in showing, by practical demonstration, the proper genesis of such an organization. This young enthusiast, still in the early prime of manhood, is at the head of the best English-speaking stock company in the world, laboriously wrought out of raw material, and he has done more to popularize Shakspere in the British Isles than any man of his day or generation, Sir Henry Irving not excepted. In the way of Shaksperian production, indeed, he has probably beaten all the records of the past century, save only those of that greatest English actor-manager, Samuel Phelps; and even he never dared to give, as Mr. Benson has given, a performance of "Hamlet" with the full text.

Only a few years ago Mr. Benson was an Oxford undergraduate, an athlete, with a passion for acting and a deep reverence for Shakspere, but no divine gift of genius. After leaving college, and gaining some sound experience of stage work, he collected a company of other young men, some of them fellow-collegians, and started in to act Shaksperian and other plays, comedy, farce, and melodrama, in the provinces. Of his troupe he made a happy family. When they were not rehearsing or acting, they played cricket or football, and local athletes soon learned to respect their prowess. For some years they had hard work, small honor, and less profit, but their progress was steady, and their growing fame in the big county towns soon led to an appearance and a triumph in London. For several years Mr. Benson has had sole direction of the annual Shaksperian festival at Stratford-on-Avon. This spring he performed a cycle of the historical plays, with a Sheridan comedy or two by way of contrast, a different play every night for two weeks, each one admirably performed, to the delight of as critical an audience as could be assembled anywhere. In London he played Shakspere, and nothing but Shakspere, in Sir Henry Irving's own Lyceum, for a season of six weeks, with reasonable profit and abundant glory, and this, too, without the meretricious aid of gorgeous spectacle. The play was the thing.

And, be it remembered, Mr. Benson is not—unless all contemporary judgment be at fault—a great actor, or even a notably fine one. He is criticised freely and severely, but he always commands respect by his intense earnestness and his independence. In his company are half-a-dozen players as good as himself, if not better, and characters are distributed, not according to seniority, but according to capacity. The leading man of to-day may have a part of only a dozen lines to-morrow. Mr. Benson does not disdain to appear, if needful, as a leader in a mob of supernumeraries. Each player is expected to sacrifice every other consideration to the one end of securing the best possible interpretation of the piece in hand, and the consequence is that the work done, if unilluminated by flashes of genius from any individual performer, is upon an uncommonly high level of general excellence—the result of complete mutual understanding and conscientious and intelligent coöperation. The most trustworthy critics have commended the vigor and life of the performances, the versatility and adaptability of the actors, their admirable delivery of blank verse, and their remarkable facility and felicity in the treatment of racy and eccentric Shaksperian humor. Already the company is spoken of as the only real school of acting in England, and London managers are offering special engagements to the principal performers, to fill the weak spots in their own organizations. It is to be hoped that they will not be able to seduce many of them from their allegiance.

In any case Mr. Benson has proved that the higher drama can be played profitably, year in and year out, without stars, without spectacle, and without much advertisement, but solely upon its merits. Mr. Phelps proved the same thing, fifty years ago, in the uncultivated district of Islington. The public taste now, as then, is sound in this matter. But no one wants to see great plays badly acted. The resuscitation of the higher drama is hopeless without performers superior in training and capacity to those who now occupy the stage. There is some ground for the hope that they may be forthcoming. The number of young college students adopting the stage as a serious profession has become considerable, and is increasing. Possibly they may supply the new blood and the genuinely artistic ambitions that are needed to make the scheme of a national theatre practicable. When one is built, Mr. Benson would be a good man to put in charge of it.

A SURVEY OF SPANISH ART.

LONDON, April 30, 1901.

If you believed all you heard of the Corporation of London, you would think it capable of nothing but evil. The City has long been a convenient scapegoat for the municipal reformer. But the truth is, whatever its vices—and I should be the last to venture to dispute or disprove them—it has the virtue of doing uncommonly well a few things worth doing. One of these is the giving of picture exhibitions. It has held ten, the tenth having just been opened in state by the Lord Mayor; and, from the artistic standpoint, only one of the ten has been a failure. That exception was last year's show, when a number of recent Academical masterpieces one had hoped never to see again were unfortunately resurrected. But this spring ample amends have been made by an exhibition of Spanish pictures, not only delightful in itself, but having a

distinct educational value for all who are interested in the history of art.

It is astonishing how little, comparatively, is known of Spanish pictures. Now that, thanks to the continual cheapening of process blocks, "art books" multiply with alarming rapidity, you will find that for twenty about the Italians there will probably be one about the Spaniards; while the proportion of critics who make of each country their hunting-ground is, I fancy, the same. To the increased facilities of travelling, the followers of Morelli attribute much of the excellence of their own criticism, and everybody knows that the railroads of Spain, in comfort and convenience, are absurdly behind the times. But I think a more probable reason for the neglect is that the Primitives, who are too much with us in Italy, in Spain are in a sad minority, and, when it comes to the Masters, the scientific critic's chief occupation's gone. However this may be, certainly Spanish art has not been exploited as unmercifully as Italian, so that there is a special pleasure in a collection that helps one to understand something of its development and tendencies.

Of course, such a collection, outside of Spain, must be far from complete. As I have said, the Primitives are few—the result, no doubt, of Moorish traditions and the conditions that followed the Moorish conquest. Even at the Prado, the delay is short before you come to the artists who have mastered the rudiments of painting; while, though different towns make mild and ineffectual boasts of their special schools and groups, but three names stand out with any real prominence in the history of Spanish art—Velasquez, Goya, Fortuny. Here you have the three great influences. Velasquez, it is needless to say, can be studied nowhere in full perfection except in the Prado. The pictures of Goya are so seldom seen that even admirers of his etchings and lithographs must sometimes wonder why he enjoys his reputation as a painter. Fortuny has always been more popular in America than in England, where his work rarely finds its way into public or private collections. The City authorities, therefore, have wisely devoted their attention to these three men, without attempting to do the impossible and represent every Spanish painter of more or less celebrity.

That there were painters before Velasquez, you have an occasional suggestive reminder—in a fine portrait of a woman, Flemish almost in sentiment and color, by Sanchez Coello; in two extraordinary Scriptural subjects, a "Nativity" and "Christ Driving the Traders out of the Temple," by that extraordinary artist, El Greco, for whose work it is to be hoped a critic of intelligence and sympathy will some day have the courage to explore the monasteries and churches of Spain, where much of it must still be hidden; in a little study of a "Partridge on the Wing" by Herrera, so vigorous and fine that it seems to explain that Velasquez owed something at least of his method, though nothing of his genius, to his first master. But the collection practically begins with Velasquez, as one is quite willing it should, if only El Greco could be more freely honored; and of Velasquez it is to be noted that in England alone there are enough fine examples to lend distinction to the gallery, where they now hang in company with canvases whose authenticity one need not be a savant in these matters to question.

The many portraits at the Prado, at Vienna, the very few at the National Gallery, are finer than any at the Guildhall. But still the series is remarkable, and, moreover, one that covers, if sketchily, the artist's entire career. I miss the beautiful, the rare "Venus" from Rokeby Hall, which I remember describing when it was shown at the Academy's "Old Masters" some ten or eleven years ago. But, otherwise, I think all the pictures in private English collections have been lent, and they begin with such early canvases as the "Omelet" and the "Water Carrier of Seville"—student's exercises, but, in feeling for form, color, quality, design, already giving promise of the master's work to follow; the lovely little Don Balthazar Carlos, belonging to the Duke of Westminster, of which there is a replica at Hertford House, and which Sir Walter Armstrong, in a moment of uncritical generosity, presented to Del Mazo; that other Don Balthazar in golden armor, the property of the King; the full-length Philip in black, thought by some people to be the original of the same portrait in the Prado; the two versions of Mariana, whose rouged, sullen, ill-natured face is as familiar as Philip's own; the portrait of Velasquez himself, the Quevedo, so full of character, lent by the Duke of Wellington, and known to the public who care by the representation in the English edition of the 'Pablo' with Vierge's illustrations. But I cannot name all, and, indeed, it would be useless to do so. I only want to give an idea of the importance of a series that becomes doubly interesting when, as at present, there is an opportunity to compare it with the performances of the men who succeeded Velasquez in his own country.

That none of these men can compete with him, can be named in quite the same breath, is a fact nobody would deny. He is the supreme master for all time, whose masterpiece is not to be surpassed. It may have been that the dim consciousness of this truth had its effect on painters, and was, in a measure, the cause of the lifelessness, the colorlessness of art in Spain for almost a century and a half after his death. There are examples of Murillo—one, the "Prodigal Son," with a beauty, a distinction, that make you sigh for the waste in his feebly pretty Immaculate Conceptions—and of Del Mazo, whom the critics, on Press Day, to counterbalance the gift of Sir Walter Armstrong, were trying to deprive of an admirable portrait of a boy with a dog. But, from the time of Del Mazo, there is no one until Goya (suddenly) gave new life and the stamp of a distinct individuality to the art of his country. Most of the Goyas have come direct from Spain, contributed by their Spanish owners for the occasion; and to Englishmen, who know this artist only by the two or three distressingly inadequate specimens in the National Gallery, they prove a revelation. Even in Madrid, I do not remember seeing portraits that have the same keen feeling for character, the same charm of color and dignity of treatment, as one now shown of himself, a second of his brother, and a third of the Señora de Ceán-Bermudez, this last lent by the Marques de Casa-Torres, who also sends a landscape, to me the marvel of the exhibition. For Velasquez one was prepared, but not for Goya in such romantic mood. I have heard him called—that is, as a painter; his supremacy as a lithographer and etcher has never been questioned—the Sargent of his time. But in this landscape he is the poet as well as the superb technician. I know neither the date of the picture nor its history. But I cannot help wondering if it had ever been seen by the young prophets of 1830, to whom his lithographs were an inspiration, for it seems to breathe the very spirit of Romanticism. Goya, however, did not rely for its romance upon the obviously picturesque, upon the mediæval castles and ivied ruins for which those ardent youths searched France from end to end. The romance was in the way he saw the familiar Spanish landscape—the bare, brown slopes of an arid land, where, in solemn shadow, the people are at play, while, above and beyond, on the one green hill, a shining white monastery stands out joyfully against the splendor of the summer sky. On that one canvas he has expressed all the solemnity and tragedy of Spain, even as, in his lithographs, he rendered once and for ever the tragic drama of the Bull-fight.

After Goya, Fortuny; but between them a wider gap in art, though less in time, than between Goya and Velasquez. To-day we can see the full artistic disaster that came of the influence of Fortuny, and we are as apt to underestimate his own work as once the world agreed to overpraise it. But this is a mistake. Fortuny was an artist of individuality, and now that capable workmen are turned out of the schools by thousands, individuality is what we look for and prize above all else. Up to his time there had been few landscape painters in Spain, probably because artists felt the hopelessness of rendering its light and colors in paint. Velasquez had fallen back upon a convention for his landscape backgrounds, content to suggest, as he alone could, the wide distances and far sierras—the prospect Madrid commands. There is less realism than poetic symbolism in Goya's "Maypole." But Fortuny painted sunlight itself—blinding, glittering sunlight—with what success is too well known to be now insisted upon. If his fine qualities are sometimes forgotten, the fault is his. He had an almost unrivalled technical facility, and, too often, he let it run away with him, as in the very pictures to which he owed his popularity. The three most celebrated are here: "The Selection of a Model," lent by Mr. Clark of New York; "The Spanish Marriage," and the "Garden of the Poets," brilliant technical displays, but little more. The artist Fortuny is seen, rather, in a study of a Moor's head, for the unfinished picture at Barcelona, and in a little "Espada," refreshingly broad in treatment, after the excessive detail that is the secret of his greatness in the eyes of people who love to study art through a microscope.

Fortuny revolutionized art in Spain. Everybody began not only to paint, but to draw, sunlight. One painter, Rico, did so with a certain distinction, and, in his time, had many followers; there is only a single picture by him. A whole school of illustration was developed—a school that helped to make American illustration what it is. Black-and-white is represented by one of Goya's lithographs and two or three of Fortuny's etchings; there is absolutely nothing by Vierge. But the largest gallery of all has been reserved for the multitude of Fortuny's crude imitators, whose staring, hard,

blinding canvases are an offence to the eye. It is interesting to see them here, completing as they do the history of Spanish art to the present day. But they make it difficult to forgive Fortuny for having brought painting in his country to such prosaic depths. To leave the modern work for the smaller room devoted to Velasquez is to pass from the brawling marketplace into the innermost sanctuary of the Temple of Art. N. N.

ANGÉLIQUE ARNAULD.

PARIS, May 9, 1901.

It is not often that our modern literature (I do not speak of light literature) takes us out of the times of the Revolution and the Napoleonic era; and it seems almost strange that a writer should apply himself to the study of forgotten characters of the seventeenth century. M. Monlaur has had the courage so to do, and we must thank him for it; he has brought us back, in his fine volume on Angélique Arnauld, to the quiet and solemn world of Port-Royal and the Jansenists.

Port-Royal has always had an attraction, however, not only for all thinking minds, but even for writers of imagination. There is something almost poetical in the contrast between the severity of the Jansenist school and the glitter of the court of the *Grand Roi*. Nobody was more alive to the importance of the Jansenist movement than Sainte-Beuve; whoever begins to read his great work on Port-Royal will read it to the end, and will be surprised to find himself carried away by this wonderful writer's profound analysis, and his marvellous description of the most ascetic community of men and women which France ever saw; a community which drew to itself such men as Pascal and Racine, as the two Arnaulds, the three Lemaistres, Nicole, and Le Nain de Tillemont. The Jansenist movement has always appeared to me as the last form of the movement of the Reformation in France; as a pacific movement, not against Rome, but against Romanism. Protestantism, which had for a moment been on the point of subjugating all France, which had had triumphant armies and gained victories on many a battlefield, had succumbed in the end, as an armed power. It had by degrees lost its "places of surety." Its last great general, Henri de Rohan, after three campaigns, exiled himself. Ever after, the Protestants ceased to be a state within the state.

It was not to be expected, however, that the Protestant spirit could be quenched for ever. The opposition to Romanism took different forms. The Parlements, in their defence of the rights of the Gallican Church, represented this opposition. In another domain, that of theology, it may be said that the Jansenist school were unconsciously the spiritual descendants of the founders of the Reformation, of the men who resisted Romanism. I say purposely that they were the *unconscious* descendants of these men—they would have protested loudly if they had been called Calvinists; but, in many senses, they had in them the spirit of Calvin.

The Arnaulds were an extraordinary family. It had alliances with the most noble houses, the Créquis, the Gesvres, the Montmorencys even, but must be chiefly regarded as representative of the proud parlementary families, who had their hôtels in the Marais and on the quays of the Île Saint-Louis. An ancestor of Angélique Arnauld was a Protestant who bore the name of M. de la Mothe, but went over to Catholicism after the massacre of Saint Bartholomew, leaving some of his children "in the religion," as was said at the time. There always remained a Huguenot substratum in the family. Angélique's father was a famous lawyer; her grandfather was Advocate-General. Through his influence, Angélique was made an Abbess at the age of eleven. She was born on the 8th of September, 1591. The child was once alone with her grandfather, who was very fond of her. "Child," said he, "don't you want to be a religious?" And as the child seemed to hesitate, he added: "Oh! you won't be a simple nun; I will make you an abbess, the mistress of the others." She tells the story in her memoirs, and adds: "I felt that I must obey his will; and, this quality of an abbess making more acceptable what I felt very hard, I answered: 'Yes, grandpapa, I am willing.' But, meanwhile, I was furious, and said to myself: 'If I were the eldest, they would marry me. Unhappy me to be born only the second of the daughters.' "

The child, whose name was Jacqueline, afterwards changed for that of Angélique, was taken to the monastery of Saint-Antoine, where she assumed the white gown of Saint-Bernard. Six weeks afterwards, she was taken to Maubuisson, a monastery of her order. Maubuisson was a magnificent abbey, which Henri IV. gave to Angélique d'Estrées, sister of the famous Gabrielle. The Abbess led such a life that her sister said of her that she was "a shame to her house." She had sumptuous apartments; spent her time in playing, hunting, dancing. Maubuisson had nothing monastic left but its walls. It was in deference to the Abbess that Jacqueline, on the day of her confirmation, took the name of Angélique. Fortunately for her, in 1602 she was removed from Maubuisson and conducted by her mother to Port-Royal, of which she was to be the Abbess.

The place was very different from Maubuisson. Why the writers of the time call the valley of Port-Royal "horrible and savage" is a mystery to me, as I have always found it very pleasant; but the convent was certainly greatly dilapidated, the walls were falling into ruins, when Angélique entered the place. She found there, on her arrival, only twelve nuns, three of whom, says the chronicle, were in a state of imbecility. The life which the young Abbess led there was half conventual, half worldly, as she received many people. Henri IV. honored her once with a visit. She read novels, studied history, chiefly Roman; she heard all the news of the Court. It was at the dictation of her father that she one day signed a paper by which she ratified the "act which had been done eight years before." Her fate was now sealed. She had a sort of Cornelian courage, and resolved to give herself wholly up to her religious duties. She undertook to reform entirely her community. To her nuns, used to an easy life, she preached a life of austerity; she herself renounced the world. She induced the nuns to put everything in common—money, books, furniture, even the little plots of the garden where they had flowers. She shut the convent to all outsiders except the sick and the poor. She made no exception in favor of her own family, even of her father, whom she consented to see only outside the walls, in the *parloir*. The famous scene of the "guichet" is well known, when the young Abbess, opening the door, told her father that she would see him no more inside the convent, and fainted away. After this sort of *coup d'état*, the reform continued, and the rules of Port-Royal became more and more severe. Angélique Arnauld called successively round her her five sisters, her mother, afterwards five of her nieces, and a cousin-german. Port-Royal became the home of the Arnaulds.

For a while her work was purely a work of reformation. She imposed, one after another, all the rules of the order of Saint-Benedict. After Port-Royal, she had also to reform Maubuisson. The history of her struggle with Madame d'Estrées is a curious chapter in M. Monlaur's book. After a term of five years spent at Maubuisson, which she left in the hands of Madame de Soissons, a virtuous princess, she returned to Port-Royal, where she continued her work. But Port-Royal would not have taken its place in history if its abbess had not adopted the theological views of Jean du Vergier de Hauranne, Abbé de Saint-Cyran, who may well be called the founder of Jansenism. M. de Saint-Cyran was born in Bayonne, in 1581; he studied at Paris, at Louvain in Belgium, and became acquainted with Jansenius. Madame Angélique Arnauld accepted the direction of Saint-Cyran, and was drawn by him into a struggle which for many years became a fierce religious war. It is not the place here to enter into the details of this struggle; they seem to us now either tedious or even incomprehensible. Viewed at a distance and through the atmosphere of time, this struggle appears a natural antagonism between the more austere form of Christianity, a more idealistic view of its teachings, and a more lenient and more materialistic Christianity. The Jesuits were famous for adapting themselves in all countries, even in China, to the instincts and habits of the people. They were looked upon by the Jansenists as the representatives of the "dévotion aisée," of a Romanism too contented with forms and ceremonies.

The doctrines of Saint Augustine, the eternal questions of grace, of justification by faith, of predestination, formed the battle-ground on which the Jansenists, with Pascal at their head, fought against the Jesuits. The real issue was the government of the Church in France, the direction to be given to the clergy, the secular as well as the regular. The impression made by the Jansenist doctrines on the French clergy was very deep and lasting, though the Jesuits triumphed, though Rome condemned the doctrines, and though Port-Royal became in the end the object of a brutal persecution. For a very long time the curés of Paris remained Jansenists at heart, and it would be no surprise to me if some of them even now were found to have Jansenistic leanings. The parlementary families, partly on account of the influence of the Arnauld family, partly on account of the severity of their lives and a certain sort of aristocratic austerity, were nearly all imbued with the spirit which gave to Jansenism its force and its moral influence.

The most interesting chapters of M. Monlaur's work are those which he has written on the friends of Angélique Arnauld. We here find proofs of the moral influence which

she acquired over the better part of the French aristocracy. Madame de Sablé was among those whom Madame Cornuel called the "importants spirituels." The Princess Marie de Gonzague-Clèves, a sister of the Palatine Princess, immortalized by a funeral oration of Bossuet, was a constant correspondant of Angélique Arnauld, and remained in communication with her after becoming Queen of Poland. Marie de Gonzague interceded with Alexander VII. in favor of Port-Royal and its Abbess when the time of persecution came. We may cite also Jeanne de Schomberg, Duchess de Liancourt, the Marquise d'Aumont, the Duchess de Luynes, and many others. When Angélique Arnauld lay at the point of death, she said to one of the sisters who took care of her: "I wish to be interred in the green (*préau*), *et qu'un ne fasse pas tant de badineries après ma mort.*" All her spirit is in these few words. She was obeyed. She was buried with great simplicity in Port-Royal de Paris, and her heart was taken to Port-Royal des Champs, the place of her predilection.

Correspondence.

ARE GUERRILLAS BRIGANDS?

To the Editor of The Nation:

Sir: A party in England, exasperated by the tenacity with which the patriot Boers defend their country, is clamoring for the execution of guerrillas as brigands. Whether England would be justified by her own record in treating guerrillas as brigands, will be seen from the subjoined dispatch of Wellington, then commanding the British army in the Peninsula, respecting presents of honorary swords and pistols to the guerrilla chiefs.

Yours, Equity.

"To Lieut. Colonel Sir H. Douglas, Bart.
Fuente Guinaldo, 2nd June, 1812.

"I have received your letter of the 24th, in regard to the letter to be written to the guerrilla chiefs, with the swords and pistols to be presented to them in my name.

"I have found that the shortest and most simple mode of expression is the most agreeable to the Spaniards, and has most effect; and it appears that, particularly since the assembly of the Cortes, they have felt that they were to look for their happiness in the independence of their country, rather than in the internal institutions. If, therefore, the letter is to be written to them in my name, I request that they may be informed that I obey with great satisfaction the commands of H. R. H. the Prince Regent, in transmitting to them these presents, as a small mark of the estimation in which their conduct is held by his Royal Highness, and by his Majesty's subjects in general; in having, notwithstanding the reverses of all the regular armies in Spain, the misfortune of the country, and in the face of difficulties of all descriptions, continued to maintain successfully the contest against the enemy. That I, having been employed by his Majesty in the Peninsula since the commencement of the contest for the independence of the nations inhabiting this part of the world, have been fully aware of the difficulties of their situation, and of the benefit which the cause has derived from their constant perseverance and valor; and that I trust that the applause which their conduct has gained, of which what is now sent them is a small token, the consciousness that they have done their duty, and the hopes which there are now good grounds for entertaining, that their labors and exertions will be crowned by the attainment of their object, the independence and the happiness of their country, will be their inducement for continuing, and, if possible, increasing, their exertions."

MEETING OF THE GERMAN SHAKSPERE SOCIETY.

To the Editor of The Nation:

Sir: On April 23 the German Shakspere Society held its thirty-eighth annual meeting in Weimar. The President, Dr. Wilhelm Oechelhäuser, an octogenarian who has given nearly half his life to the promotion of the Society's interests, called the meeting to order promptly at 10:30 A. M., and in his opening address paid a deserved tribute to the memory of the late Grand Duke. The leading address was made by Ernst Possart, manager of the Bavarian Court Theatre. His topic was, "What Kind of Stage Scenery Is Best Adapted for the Plays of Shakspere?" Professor Possart's voice and delivery are alike admirable, and his discourse, which is now being printed for the thirty-seventh volume of the *Shakespeare-Jahrbuch*, will make interesting reading for the layman as well as for the Shakspere specialist. He called attention to the fact that, in the older theatres, only one-half the stage was movable, while now not only can both parts be moved, but the entire stage scenery can be shifted in just twelve seconds. In answer to the question whether it is always best to stage a play in the form in which the poet wrote it, or whether the stage manager has not the right to omit and to adapt, the speaker contended for the liberty of curtailment and adaptation. "The unfettered genius of a great poet, borne away by the very fulness of his thought, which he can never exhaust, finds outlet in an undue multiplicity of scenes." Schiller's "Don Carlos" and Goethe's "Faust" were cited in illustration. It was urged that, in the case of Shakspere, it was absurd to clamor for an unchanged stage-text, since no such thing was in existence. "Shakspere's plays were already changed and additions made even in the earliest quarto and folio editions."

At the banquet in the afternoon, Professor Schick, of the chair of English in the University of Munich, gave a toast to the Shakspere scholarship of America. He read aloud a part of the recently issued prospectus of the Shakspere Society of New York, and welcomed its forthcoming publication, *New Shakespeareana*, into the realm of Shakspere periodicals.

The play given at night in the Weimar Court Theatre in honor of the Shakspere Society was the Schlegel-Tieck version of "Macbeth," with Fräulein Schippel as *Lady Macbeth* and Herr Weiser as *Macbeth*. The stage management was under the direction of Professor Possart. The actors were at their best, and the audience, though composed largely of Shakspere specialists and critics, was generous in its applause from the first scene to the last.

Treasurer von Bojanowski's annual statement of the Society's growth and financial condition showed a large increase in the membership, which now numbers 375, and a surplus of $500 in the treasury. The only new honorary member elected by the Society was the Grand Duke Constantine of Russia, the translator of "Hamlet" and the author of a Shakspere Commentary. It is gratifying to note that the Society's select list of honorary members is headed by the name of our own Dr. H. H. Furness of Philadelphia.

C. Alphonso Smith.

39-40 Markgrafen Strasse, Berlin,
May 2, 1901.

Notes.

'The *Mayflower* and her Log,' by Dr. Azel Ames, and 'Content in a Garden,' by Mrs. Candace Wheeler, are among the latest announcements of Houghton, Mifflin & Co.

A. C. McClurg & Co., Chicago, have nearly ready 'Aphorisms and Reflections,' by Bishop Spalding.

A new edition of 'Lux Mundi,' with an appendix, is forthcoming from Thomas Whittaker.

The South Publishing Company, New York, has in press 'The Province of Quebec at the Beginning of the 20th Century: A Treatise of Natural Resources and Development,' by William H. P. Walker.

Under the general editorship of Caspar Whitney, the Macmillan Co. have in preparation a series of monographs on game under the title, "The American Sportsman's Library." The same firm announce a revised edition of Maurice Hewlett's 'Earthwork out of Tuscany'; a work on Marie Antoinette in the latter days of the French monarchy, by Miss Sophia H. MacLehose; 'The First Interpreters of Jesus,' by Prof. George Holley Gilbert; and 'Lectures on the History of Physiology during the 16th, 17th, and 18th Centuries,' by Sir Michael Foster, Secretary of the Royal Society.

'The Progress of the Century' (Harpers) is a retrospect composed of the papers which appeared weekly in the New York *Sun* at the opening of the present year. Names like those of Alfred Russel Wallace, Flinders Petrie, Sir J. Norman Lockyer, T. C. Mendenhall, Sir Charles Dilke, Capt. Mahan, Andrew Lang, Cardinal Gibbons, and Goldwin Smith (among others) attest the weight of the "symposium." The volume is well worth placing beside the corresponding survey published at one stroke by the *Evening Post*, 'The 19th Century' (Putnams).

A thin volume entitled 'American Orators and Oratory' (Cleveland, O.) reports three lectures delivered by Col. Higginson at Western Reserve University during the present year, under the auspices of the Western Reserve Chapter of the Daughters of the American Revolution. A good portrait of the lecturer accompanies his discourses on "Colonial Oratory, or the Reign of the Clergy," "Revolutionary Oratory, or the Rise of the Lawyers," and "Anti-Slavery and Lyceum Oratory," of which the speaker was no mean part. The third section has most permanent worth, but all are agreeable and suggestive, and calculated to interest more than the 500 to whom the limited impression is dedicated.

Mr. Richard Burton's short life of Whittier in the "Beacon Biographies" (Small, Maynard & Co.) suffers more than some other numbers of the same series from its spatial limitations. To write of a poet, as a poet, instructively, or even intelligibly, without quoting him freely, is quite impossible, and Mr. Burton hardly quotes Whittier at all. Mere titles of poems convey no idea of the poems to those who are not acquainted with them; and to those who know Whittier at first hand, either in his works or in the Pickard biography, this sketch will yield little or nothing. Its critical attitude towards Whittier is apologetic, as if we had got past his queer old-fashioned ways. This is especially true as regards the anti-slavery poems. None of his later poems, not even "Snow-Bound," stirred men's hearts as did

the anti-slavery poems in their day. Moreover, Mr. Burton fails to see that it was Whittier's anti-slavery poems that made him a true poet. It is not likely that he would ever have been one without the intervention of his anti-slavery apostolate. From all this there is a certain remoteness in Mr. Burton's touch, as of a simulated interest and imperfect knowledge. Garrison is said to have started the *Liberator* in Washington, and Gamaliel Bradford is twice referred to as the editor of the *National Era* (Gamaliel Bailey, it should be); and Frémont's "defeat at the polls" is put in strange conjunction with his famous military order in Missouri, as if this were the cause of that.

'A Practical Treatise on Tunnelling,' by Charles Prelini (New York: Van Nostrand), gives a clear exposition of modern methods of tunnel construction in both Europe and America. Its typography deserves special mention as being far superior to that of most American technical books.

Those who are curious concerning the Old Catholic schism in Germany which followed the Vatican decrees of 1870, will welcome Dr. Goetz's 'Franz Heinrich Reusch: Eine Darstellung seiner Lebensarbeit' (Gotha: Perthes, 1901). It was well worth while to put on record such a sketch of the life and labors of one of Germany's most eminent scholars, but the story has an interest and importance beyond the mere biographical details. Like the correspondence between Cardinal Vaughan and St. George Mivart, it illustrates how completely intellectual subservience is the price required for Catholic unity; how external obedience to authority —whatever may be the mental reservation or revolt—is the one indispensable necessity for all who would maintain communion with Rome. To men like Döllinger and Reusch it was impossible to surrender convictions based upon the certitude of knowledge; trimmers like Bishop Hefele might submit and accept the reward of preferment, but these were men of different mould. In the quiet recital of Dr. Goetz and the extracts from Reusch's correspondence one can follow the internal conflict and the heroic resolve which was required for priests, bred and trained in the Catholic tradition, to endure excommunication and expulsion from the Church, and commence a new career in life, rather than prove false to their beliefs. What the Church lost in driving such men from its communion can be estimated from Reusch's monumental work on the Index—'Der Index der verbotenen Bücher'—of which the two solid octavos are an inexhaustible mine for all who would understand the intellectual, spiritual, and literary development of the last three centuries.

The two latest bibliographies of the New York State Library, Nos. 23 and 24, are a Reference List on Connecticut Local History and a Bibliography of New York Colonial History, respectively. Mr. Charles A. Flagg is sole compiler of the first, and joint compiler with Mr. Judson T. Jennings of the latter. Both are excellent performances, with the limitation that they depend upon the resources of the Library which puts them forth. In the case of Connecticut, the term "local history" is construed strictly, but ecclesiastical affairs had to be embraced in the scheme, for obvious reasons. Genealogies are not included. The New York list extends to 1776. Topics omitted are specified in the preface.

'Publications of the United States Naval Observatory: Second Series, Volume I.' is the title of a new volume of observations which begins with the resumption of work interrupted by a removal from the old Observatory and a remounting of the instruments. The former custom of issuing volumes annually has been abandoned "for many reasons," which are not, however, set forth, and hereafter the publications of the Observatory will appear at intervals depending upon the kind and amount of material available. The present volume contains all the transit-circle observations of the sun, moon, planets, and miscellaneous stars made during 1894 to 1898, except those of the "Astronomische Gesellschaft zone," —13° 50′ to —18° 10′.

An examination of the statistics of last year's petroleum product of the Baku fields, by Mr. J. C. Chambers of Batum, in the Consular Reports for May, and a consideration of the age of many of the wells, their gradual increase in depth and in water accumulation, can leave, he says, no doubt of the gradual draining of the territory. The total output was about two thousand million gallons (a little in excess of the previous year, on account of the number of new wells), of which three hundred millions were exported from Batum, and represent the competition with American oil. The facilities for transportation are being extended by the construction of pipe-lines and railways. The consumption of refined oil in Russia is greatly restricted by a tax of 5.6 cents upon a gallon of oil which can be delivered for 2.5 cents. Another proof that the loss of her colonies has been of benefit to Spain may be found in the starting of a large coffee plantation near Malaga, the cultivation of coffee in the peninsula having been forbidden while Cuba and Porto Rico were Spanish possessions. Some suggestive figures are given showing the predominance of German interests in Central America over those of other foreign nations, apropos of the reorganization of the German consular service in that country; and Mr. Fowler of Chefoo demonstrates by statistical tables the disastrous effects of the troubles in China upon American trade.

The *National Geographic Magazine* for May opens with a sketch of the political history of the Latin-American republics, by Mr. John W. Foster, in illustration of their incapacity for republican and representative government. There has been an absolute failure of the expedient to prevent revolutions tried by most of them—of forbidding in their constitutions reëlection to the Presidency. In the Brazilian Constitution there is an additional provision which makes ineligible to the Presidency candidates related by blood or marriage to the outgoing President in the first or second degree. Dr. Navarro gives some interesting facts in regard to the recent industrial progress of Mexico, and Mr. H. Gannett describes the physical features of Alaska. The variety of climate is shown by the fact that, at a point on the Yukon, "temperatures of —60 and of 87 degrees have been recorded, a range of 147 degrees." Then, in the interior, there is little dull, cloudy weather, while at Unalaska "only eight days in the year during several years of record were entirely clear, and only forty-five partly clear; the remaining 312 being cloudy, and 271 of those were rainy or snowy." Notwithstanding its immense mineral wealth and its extensive spruce forests, this writer is inclined to believe that Alaska's greatest value lies in the unrivalled grandeur and beauty of its mountain, fiord, and glacier scenery.

M. G. Darboux, the permanent Secretary of the Paris Academy of Sciences, has gathered much interesting information on the "International Association of Academies," of recent origin, in an article published in the *Revue Internationale de l'Enseignement* for March. The writer has himself contributed to the achievement of the task of uniting the great learned bodies of nearly all civilized nations in a single international organism, and his account of the movement, from its inception to its present stage of successful operation, is clear and fascinating. The complete statutes of the Association are embodied in the article.

Fifteen new letters of Heinrich Heine have recently been discovered by Ernst Elster, the well-known Heine scholar. They are addressed to an intimate friend of the poet during the years of his early manhood, namely, Rudolf Christiani, son of a Protestant theologian, a young lawyer of culture and refined tastes. A first instalment of the letters, together with comments by Elster, is published in the May *Rundschau*. The additional light which this friendship and the letters throw upon Heine's character does not tend to lower one's estimation of him—rather the opposite.

The telegram received last week, announcing the discovery of the half-eaten body of the Rev. James Chalmers, unhappily places beyond doubt the report of his murder. Born in Argyle in 1841, he sailed as a missionary to Rarotonga in 1866, and removed to New Guinea in 1877. He had penetrated further than any other European into the latter island. His heroic character won for him the warm personal friendship of Robert Louis Stevenson, who actually wished to survive him that he might write his life. There are several references to Chalmers in Stevenson's letters. In one he speaks of this missionary as "a man that took me fairly by storm for the most attractive, simple, brave, and interesting man in the whole Pacific"; in another, as "a man I love." The last action of Chalmers's life was in keeping with the general tone of it, for his murder by cannibals occurred during an attempt to make peace in a tribal fight.

—The new series of County Guides, published in London by J. M. Dent & Co. and in New York by E. P. Dutton & Co., will deserve success if its first volume is a fair specimen of what is to follow. In view of the King Alfred Millenary at Winchester next July, a beginning is made with Hampshire, which is interpreted as including the Isle of Wight. The plan of the book is well adapted to the needs of the tourist. First come eight itineraries, composing rather more than half the contents. These are followed by chapters, written by specialists, on local botany, entomology, geology, birds, fishing, shooting, and cycling. An alphabetical gazetteer gives more detailed information of the respective towns and villages than space allows in the itineraries. A map of the whole county, on the scale of four miles to an inch, is supplemented by nine sectional maps. The insertion of forty-one delightful illustrations makes this volume far pleasanter to glance through than the average guidebook. The author, Mr. George A. B. Dewar, knows his subject

thoroughly, and has on the whole shown good judgment in selection; though we could have spared his occasional rhapsodies on the greatness of the British Empire, and his devotion of half a page to an entirely irrelevant description of the Thames from Battersea Bridge. Nor is our interest in the landscape at Netherton enhanced by learning that Mr. Dewar himself used to ride through it daily when he was being coached for Oxford. The literary associations of the county are recognized: one itinerary is occupied with "Charles Kingsley's Country" and another with "Gilbert White's Country." The book is published at a very moderate price.

—One of the most successful of the "Highways and Byways" Series is the latest volume by Mr. W. A. Dutt, entitled 'Highways and Byways in East Anglia' (Macmillan). The illustrations, by Mr. Joseph Pennell, over four hundred in number, or one to every page, charm the eye at once, and there are those to whom they may prove the main attraction of the book. But Mr. Dutt appeals to a wide audience. To the antiquarian, the student of literature, and, above all, to the lover of country life and scenes we can heartily recommend this attractive medley of anecdote, literary reminiscence, and description. In fact, we know of nothing of the kind that has given us so much pleasure as have these sympathetic sketches of a part of England little haunted by the tourist, where, free from the horrors of manufacturing towns, English rural life retains its keenest charm. The counties of Norfolk and Suffolk probably rival any other two in the United Kingdom for their roll of names distinguished in literature. They have bred a peculiar type of man. Sir Thomas Browne, Oliver Goldsmith, George Borrow, and Edward FitzGerald, to name only a few, were all men with marked personalities; and, in the case of the last two, especially, it may be said that their names suggest to the general reader, quite apart from their works, a certain original way of living and looking at life, an eccentricity that signified a real distinction of character. In the field of art, East Anglia boasts Gainsborough, Constable, and Crome. Norfolk and Suffolk pride themselves on being counties, not shires, and their seacoasts are fringed with legends of sunken villages and invasions of the Danish Vikings and Normans, while, to judge from Mr. Dutt's pages, they have more than their share of haunted Granges and records of murder and deeds of violence of all kinds. Mr. Dutt's pilgrimage was made on a bicycle; he gives a map of his course, and many will wish to follow it through the charming villages of which Mr. Pennell yields us glimpses. They cannot do better than take Mr. Dutt's book with them.

—The second instalment of Mr. Francis Olcott Allen's immensely laborious 'History of Enfield, Conn.' (Lancaster, Pa.: The Author) comes promptly to hand. Nothing more exhaustive in the line of local history has ever been attempted. Here we have in the words and style of contemporary chronicles the story of the upbuilding of a New England town from its first land purchase to the middle of the nineteenth century. In the first volume was reproduced with Chinese fidelity the record of land grants and town meetings. The second volume gives, first, a transcript of the Treasurer's Book and the Selectmen's Accounts, comprising many curious and suggestive items. Then follow church records of the First Ecclesiastical Society, and town and church records of births, marriages, and deaths. A very interesting account is given of the church separation following "The Great Awakening" and the formation of the "Enfield Strict Congregational or Separate Church." Mr. Allen includes the "Historical Narrative and Declaration" adopted by a convention of Separate leaders in 1781—a most valuable document, throwing much light upon the true inwardness of that remarkable religious movement. While certain general characteristics are common to these ancient towns, each develops marked individuality. Enfield's perverse spelling indicates isolation from Massachusetts's centre, and restricted privileges. This same isolation explains extreme minuteness of local detail, especially in the record of marriages and deaths. One good minister carefully sets down the fee received for performing the marriage service, varying from "a crown piece" to "two guineas more than weight." A careful study of the death record of town and church would reveal changes in mortuary conditions. The number of children dying in certain years shows the prevalence of epidemic distempers. In the church records from 1808 to 1848 the causes of death are set down with great particularity. The assignment of "languishment" as the cause of many deaths is noteworthy, and if the term needs a gloss, the Oxford Dictionary comes just in time to supply it, quoting this passage from Edward Augustus Kendall's 'Travels through the Northern Parts of the United States' (1809): "Pulmonary consumption. . . . This disease, which, after the country-people among the whites, they call a languishment, is equally fatal to the Indians." Students of local history will find a mine of treasure in these volumes.

—'Die Rechtsverhältnisse der Deutschen Schutzgebiete,' by Professor von Stengel, brings up to date a work of a similar nature published by him in 1895. Changes in the legal status, regulations, etc., of the German colonies have been far-reaching enough to render so recent a book obsolete. Some illuminating remarks on the general nature of colonies, protectorates, and spheres of interest precede a more detailed consideration of the national possessions. The modes of acquisition, the constitution, government, and system of justice of the colonies are treated with great precision, especially in their legal aspect. The protective power is exercised by the Emperor in the name of the Empire, but he has been restricted in many ways by a refractory Reichstag. As for the great monopolistic companies which it was hoped would develop the colonies with a minimum of expense to the mother country, one by one they have been obliged to surender their powers into stronger hands. The German colonies do not belong to the Zollgebiet, but rank as "Ausland"; their exports to the mother country are subject to duties. In the colonial system is to be noted the wide power of the Governor, which has often proved most salutary, and the rather minute and over-developed system of justice. The latter contrasts sharply with the rough-and-ready methods of English and American frontier justice. The impression left is that of an extremely complex system, bearing unmistakable marks of importation from Berlin and the "green baize." Plainly the natives cannot be expected to understand even the part of this system that applies to themselves. When not naturalized, they are subjects, and not citizens, and are under the general supervision of the Emperor. The question of their punishment is a vexatious one. What is punishment according to the European system may be a treat to the native. Imprisonment, for instance, realizes for the natives his highest ideal—life without exertion. Friction of various kinds has led to a strong movement towards restoring the administration of native justice to the native authorities, of course under supervision. From the legal standpoint, the present volume is, without question, the most authoritative treatise on German colonies.

CONRAD WEISER.

Conrad Weiser, and the Indian Policy of Colonial Pennsylvania. By Joseph S. Walton, Member of the Pennsylvania Historical Society. Philadelphia: George W. Jacobs & Co. Pages 420.

The author of the present comparative analysis of the Indian politics of the most important colonies which afterwards became parts of the Federal Union, is the present head of an old and well-known Friends' school in the city of Philadelphia. His work, in method, aim, and detail, bears the marks characteristic of the product of Quaker training. It is exact, painstaking, and thoroughgoing, and must receive the consideration of all students who candidly desire to know the whole of the origin of the American social and political fabric. At the same time it is written in a very frigid style, enlivened by no gleam of the imagination from cover to cover. It reads as if the Quaker conscience and the Quaker love of truth had perpetually compelled the author to hew the line close to the records, lest he run into those dangers of exaggeration and generalization that are so charming to the general reader and so much distrusted by the special student. A lighter hand and a freer rein would have set this narrative to galloping where now it moves after the fashion of an engineer's approaches to a besieged town, would have made a more popular if less valuable contribution to our history, and would have substituted a more humanly sympathetic treatment for the entirely intellectual breadth of view with which the author has considered his theme.

As a whole the work is far less a biography of Conrad Weiser than it is an exposition of the practical Indian politics of the colonies. The biographical details are all too few concerning one whose life was a romance, whose perils and hardships, undergone in the wilderness, were great, and whose services in behalf of an English America have been hitherto unknown to the writers of American history. These services consisted in deferring the French and Indian war through his influence with the Six Nations on the one hand and the colonial governments of New York, Pennsylvania, Virginia, Carolina, and Maryland on the other, until the colonists of English, German, and Dutch descent had grown strong enough, and had become sufficiently drawn together by common interests, to withstand the final alliance made by the French and the Indians against the seaboard settlers.

Conrad Weiser came into the service of

the Province of Pennsylvania in 1738, at a time when the Delaware Indians, of whose interests William Penn had always been regardful, but to whose welfare Penn's heirs were indifferent, were losing their former prestige, and the powerful confederacy of the Six Nations was more and more deferred to by the Pennsylvania authorities. This change of policy on the part of the Proprietors of Pennsylvania seems to have been due largely to Conrad Weiser's influence. As a young man Weiser had spent much time with the Iroquois Indians in New York. For one period of eight months he lived with the chief, Quagnant, enduring a great deal of cold, and by spring, according to his own naïve narrative, his "hunger surpassed the cold by much." During a residence of fifteen years among the Indians he acquired a familiarity with the Indian tongue which, together with his honesty and acquaintance with the plans of both Indians and whites, made him the only completely satisfactory Indian interpreter in America. He first began to act as an interpreter between the Indians and the high-mettled Dutch, "and he himself recorded the fact that there was plenty of business and no pay."

In 1729, thirty-three years after his birth near Würtemberg, Germany, he followed his father from New York to the shores of the upper Schuylkill in Pennsylvania, participating in the migration of the dissatisfied Palatinates from the one colony to the other. The Tulpehocken lands where the Palatinates settled by invitation of Gov. Keith of Pennsylvania, belonged to the Delaware Indians, over whom the Six Nations claimed undisputed authority for a number of years. Shikellimy, an Oneida chief, was sent by the Six Nations to the forks of the Susquehanna in 1728, to look after these land interests and to exercise general oversight over the Shawanese and Delaware Indians. Near where Sunbury now stands, Shikellimy dwelt until bis death in the winter of 1748-49. During nearly the whole of this period this ambassador of the Six Nations and Conrad Weiser trusted each other completely, and, through Shikellimy, Weiser exerted an influence in the Indian politics of half-a-dozen colonies greater than that of any other white man. It was Weiser who made known to the Pennsylvania authorities the power of the Iroquois tribe and the importance of the Six Nations, and out of this knowledge grew the agreements, treaties, or conveyances of 1732 and 1736, by which on the one side the Iroquois promised not to convey any land within the limits of Pennsylvania except to Penn's heirs, and on the other side Pennsylvania became sponsor for the Iroquois claims on the Delaware River. The Delaware Indians with whom William Penn had dealt were thus set completely aside, as a result of the work of Shikellimy and Conrad Weiser. For this, Pennsylvania was drenched in blood from 1755 to 1764; but, says our author, "Pennsylvania suffered that a nation might live. She brought upon herself after many years a Delaware war, but escaped a Six Nations war, a French alliance with the Iroquois, and the threatening possibility of the destruction of all the English colonies on the coast."

It is made plain in the course of these interesting pages that, but for this compact made by Penn's heirs with the Iroquois, a compact by which each side sought wholly selfish ends, the Six Nations would have yielded to the advances of the French, who were much better organized than the English, and who dealt much more understandingly than the English settlers with the Indians. This compact being made, the shrewd Iroquois, dominating the policy of the Six Nations, found themselves in a position where, through a long course of years, they were tempted to play the Englishmen and the Frenchmen against each other. The Indians took what they could get from the French in wampum, money, powder, lead, and rum, and then induced the English to bid higher. While this auction was extending over the years from 1732 to 1755, the English colonies were growing in population, in the means of defence, and in solidarity of interest. They had come to produce their own breadstuffs, and to make their own powder, while, when hostilities came, the French were compelled to buy their munitions of war in Europe with furs obtained from the Indians. Actual war cut off the French supply of furs and consequently the supply of powder. The Pennsylvania Quakers seized this favorable opportunity, and, through the skilful Moravian missionary, Frederick Christian Post, drew the Ohio Indians away from the French.

At the Philadelphia treaty of 1742, the Iroquois contemptuously ordered the Delaware Indians out of the council-house, made claim that both the Marylanders and Virginians were settling on lands that belonged to the Six Nations, desired the Governor of Pennsylvania to press for payment of these lands, and announced that they would take payment with the tomahawk if their claims were not recognized. On the way back to the woods from this conference, Conrad Weiser induced the Iroquois to reveal to him the strength of the tribes in alliance with the Six Nations. They told him that, outside of their own tribes, they controlled 5,000 warriors and an infinite number besides along the Mississippi and the lakes. The colonies were on the verge of an Indian war in January, 1743, when Conrad Weiser started through the snow for Shamokin on the Susquehanna, and met there the representatives of many tribes and nations who were waiting to learn what the white men proposed to do in regard to the recent murder of some Iroquois hunters in Virginia before setting the long frontier aflame. Maryland had been willing to negotiate with the Six Nations through Gov. Thomas of Pennsylvania in regard to the Iroquois land claim; but the Virginia authorities had blustered for some time before yielding to Weiser's advice. The Indians assembled at Shamokin, after long deliberation, consented to Weiser's plan of adjustment for the most part, but announced that war would be waged against Virginia unless the Virginians made amends for the wrong done the Iroquois hunters. Then the Virginia Governor promptly came to terms, and asked the Governor of Pennsylvania to send Weiser to the Indian chiefs with presents, and to arrange for a treaty in regard to the land question. Weiser, therefore, went to Onondago, where the council-fires of the Six Nations were held. When the "Black Prince" of the Onondagos welcomed Weiser, saying that he never came without bringing good news from Philadelphia, Weiser replied, "It is enough to kill a man to come such a long and bad road, over hills, rocks, old trees, and rivers, and to fight through a cloud of vermin and all kinds of poisonous worms and creeping things, besides being loaded with a disagreeable message"; whereupon, Weiser adds, the Indians laughed.

After the fashion of the modern caucus and the methods of the American Congress, Weiser held a number of secret interviews with the leading chiefs before the great council fire took place, and, after a ceremonial consideration of the subject, lasting for some days, the Indians agreed to a treaty at Lancaster with Maryland and Virginia, Pennsylvania acting as the mediator upon lines marked out by Weiser. The Lancaster treaty of 1744 was held at a time during which any day might bring news of a war with the French; and should the Six Nations ally themselves with the French, the future of the English colonies could easily be foreseen. Fortunately the conference was guided by Weiser. Virginia and Maryland were compelled to make financial provision for the Indians before coming to the treaty. These colonies were also speedily convinced of the wisdom of laying aside their opposition to the Iroquois land claims, and of settling for the Indian lands in such a way as to secure the friendship of the Six Nations. By Weiser's diplomacy the schemes of the French were thwarted, and the frontiers of the English from the Carolinas to New England were protected. Faithful to the white man's best interests, Weiser was also true to his Indian friends. New England and New York were as anxious to have the Iroquois take up the hatchet against the French as the French were that the Indians should tomahawk and scalp the English. The Six Nations desired to remain neutral, and, in their efforts in this direction, were assisted by Weiser, who was in turn backed by the province of Pennsylvania.

To Weiser Gov. Gooch of Virginia again turned in the autumn of 1744, when Carolina and Virginia desired that the Catawba Indians of the South and the Six Nations should make peace. Gov. Thomas of Pennsylvania and the Assembly of that colony promptly took the matter up, and Weiser was persuaded once more to make the long journey to Onondago. On approaching that place in the spring of 1745, in company with Andrew Montour, a Pennsylvania half-breed, and among the Delawares a person of importance, the chief Shikellimy and the chief's son, it was learned that the Indians were just about starting for Canada to hold a treaty with the French. The Indians, however, informed Weiser that they knew what they were about; that they had decided what to say to the French, and would not yield their position, and that they desired to remain neutral, since, if either the French or English conquered, the Indians would be driven to the wall by the conqueror. As we know, the English conquered, and the fate which the Indians feared befell them when the balance of power, which they so ardently desired to preserve, was destroyed. At the Albany Conference of 1745 the New England colonies were determined to push the Six Nations into a war with the French. Pennsylvania opposed this policy, and urged that, if it could be carried out, the Indians of opposite sides would pass one another and scalp the whites. Exasperated by the insistence of Massachusetts, New York declared that colonies with a long unprotected frontier should not be dragged into a war for

which they were not prepared. The outcome was that the Indians, supported by Pennsylvania, declined to be pushed into a war, and within Pennsylvania the Quakers became justifiably suspicious that proposed future conferences were intended only to let loose the tomahawk and scalping-knife. In 1747 Col. Johnson, the Indian agent for the province of New York, induced the Mohawks and several straggling tribes "to take up the hatchet" against the French; Massachusetts voted four thousand pounds to encourage the Six Nations to prosecute the war. John Kinsey, the leader of the Pennsylvania Assembly, favored the Iroquois struggle for neutrality, and he thwarted the efforts of New York and New England towards securing a general congress of the colonies which should induce the Iroquois to take sides, and the Iroquois thus won.

In 1748 Weiser made a treaty with the Ohio River Indians at a place called Logstown, which stood on what is now the Allegheny River, below the present city of Pittsburgh. This treaty left Pennsylvania in possession of the Indian trade from Logstown to the Mississippi, and from the Ohio to the Michigan region. Virginia assisted in the furtherance of this treaty, but Maryland would contribute nothing towards the expenses. As soon as it was discovered that Weiser had unlocked a mine of wealth, Virginia made claim to the Ohio land, alleging that, under the Lancaster treaty of 1744, the border of the Virginia lands then negotiated for extended as far west as "the setting sun." The Indians, however, always maintained, Weiser supporting the contention, that the western border of their lands was meant to be the line of the Allegheny Mountains where the sun sank from view. The Virginians persisted, and organized the Ohio Company, a land company in which Laurence and Augustine Washington were interested. Trade rivalries between Pennsylvania and Virginia ensued; and while the English traders were thus at odds, the better organized French pushed into the Ohio territory. The French did not permit rum traders and debauchees to accompany them. The English had no conscientious scruples on this score, and their rapacity did much to demoralize the Indians and injure their own cause. Indians made drunk by English rum participated in quarrels and crimes. Col. Thomas Cresap, the Maryland trader, told the Indians that the Pennsylvania traders cheated them. Weiser and Richard Peters, representing Pennsylvania, on the other hand, told the Indians at a conference held in 1750, that they would do well to trade with the Virginians and Marylanders, and advised the Indians to give the preference wherever they could trade with the most advantage. To quote our author:

"Weiser stood alone. He was no Indian trader. Col. Johnson [the New York Indian agent], George Croghan [the Pennsylvanian, who was the greatest of all the Indian traders], Andrew Montour [the Pennsylvania half-breed], the Ohio Company, and a host of little traders were all bent on their personal gain, and consequently jealous of each other. . . . The colonies became the dupes of an army of mercenary traders. And in proportion as the colonial interests were divided, the French by centralization won. In 1750 the English controlled the trade on the Ohio, the Scioto, and the Wabash, and shared it with the French in the lake region. By 1755 this trade was all lost."

Finally, the determination of the French to drive the English from the Western country and the promises of the French to help the Delaware Indians regain their Western lands, which had been taken from them by Pennsylvania's treaties with the Six Nations, gave the Delawares the opportunity to revenge their wrongs and insults over which they had long brooded. A number of their young men and most of the Ohio tribes put on the war paint. The incompetency shown in the management of the Braddock expedition by the English sent the Indians to the French side in great numbers. The Six Nations could no longer control the Western Indians. Conrad Weiser had been set aside, and the management of Indian affairs passed from Pennsylvania, owing to a blundering policy which substituted inferior men for the carrying on of the important work in hand. Finally, independently of governors and self-seeking Indian agents and ignorant crown representatives, the Pennsylvania Quakers succeeded in persuading the Shawanese and Delaware Indians to desert the French; the Quaker agent being Frederick Christian Post, a missionary of the Moravians, for whom the Delawares had a strong affection.

In the Indian politics of the colonies it is apparent that the Indian love of justice and veracity, their regard for the memory of William Penn, and their long memory for wrongs and benefits, were as important factors as their cupidity and their appetite for rum. It is significant, too, that Conrad Weiser, to whose influence and efforts may be justly attributed the firm establishment of the English colonies upon the seaboard, and the Moravian missionary Post, who finally made peace with the Delaware Indians, were both Germans.

FOUR BOOKS ON MUSICAL TOPICS.

Tchaikovsky. By Rosa Newmarch. John Lane.

Choirs and Choral Music. By Arthur Mees. Scribners.

Musical Studies and Silhouettes. By Camille Bellaigue. Dodd, Mead & Co.

Handel. By C. F. Abdy Williams. E. P. Dutton & Co.

In 1888, five years before his death at the age of fifty-three, Tchaikovsky wrote in his diary that up to that time his music was almost unknown in Berlin. In the same year he was greatly surprised to get an invitation to conduct his first suite at a Gewandhaus concert in Leipzig. Vienna was still further behind the times, for when Brodsky played Tchaikovsky's violin concerto there, Dr. Hanslick characterized it as "stinking music"; and when Tchaikovsky once visited that city with the idea of giving a concert, he was barely mentioned in the newspapers, whereas the third-rate Mascagni, about the same time, stirred up the whole town to such a turmoil of excitement that the press recorded all his movements as if he had been a king. It is the old story of musical genius having to wait till after death for recognition. To-day, Tchaikovsky's "Pathétique" is the most popular of all symphonies, and even in London his name draws better than any other except Wagner's.

In view of the great vogue this Russian's music has acquired within the last decade, it seems strange that there should be so little literature about him. The musical dictionaries of Riemann, Grove, and Baker do not mention a single book or even essay on him. Two years ago, however, the "Harmonie" of Berlin published a volume of 127 pages entitled 'Musikalische Erinnerungen und Feuilletons von Peter Tschaikowsky.' This contains a brief biographic introduction, a diary of his musical experiences in Leipzig, Berlin, and Hamburg in 1888, and a number of selections from the musical criticisms which he wrote for Moscow newspapers during several years, when he needed funds. Most of this material is translated from Professor Laroche's Russian volume, 'The Collected Writings of Tchaikovsky.' In the English language the best essay on Tchaikovsky is to be found in Huneker's 'Mezzotints in Modern Music.' The volume now before us, by Rosa Newmarch, is the first attempt at a regular biography; a mere sketch, to be sure, of 105 pages, but it is well to make a beginning. The rest of her volume consists of the 1888 diary and fifty-nine pages of selections from the musical criticisms just referred to.

These criticisms are singularly disappointing. They show, on the whole, a strange lack of insight and appreciation of what is best in music. Bach the Russian composer did not care for; Beethoven usually bored him; Chopin failed to interest him until Nicholas Rubinstein opened his eyes; he submitted to Schumann's influence, but dwelt more on his faults than his merits. The "Lohengrin" prelude left him cold, and so did the Nibelung performances of 1876, and it was not till some years later that the greatness of Wagner dawned on him. Nor had he the least use for Brahms: "There is something dry, cold, vague, and nebulous in the music of this master which is repellent to Russian hearts. From our Russian point of view Brahms does not possess melodic invention." Throughout these criticisms there is a certain timidity, a lack of decision, a vacillation between the romantic and the classical. The fact that most of Tchaikovsky's criticisms were written between 1872 and 1876, when his genius was not yet matured, helps us to understand his indecision. In the field of opera, his early sympathies even went with Rossini and Donizetti, which explains why his operas failed to make their way outside of Russia.

That this same man should have become, in the realm of orchestral music, one of the leaders of the modern movement, as original and up-to-date as Liszt, Grieg, Dvorák, Saint-Saëns, is one of the marvels of musical history, and makes him an extremely interesting object of study. Under these circumstances, it is to be greatly regretted that he one day destroyed the many bound volumes of his diary. However, it is said that hundreds of letters by him are extant and ready to be printed. It will then be possible to prepare a more elaborate biography than the one under review. The author does not credit the commonly accepted opinion that Tchaikovsky committed suicide. Yet she relates how, after his marriage, he tried to end his life by standing up to his chest in a river in the hope of catching a fatal cold. There was no doubt a pathological element in his life; yet that does not justify the writer in speaking of his preference for the minor as "morbid." The minor mood is quite as healthy as the major.

Mr. Arthur Mees is better known as a choral conductor than as a writer. He is at present conductor of the Mendelssohn Glee Club of New York, and formerly was

Theodore Thomas's assistant in Cincinnati and elsewhere. For some years he also wrote the notes for the Philharmonic programmes. His book on 'Choirs and Choral Music' is the work of an expert, and covers its department thoroughly. Perhaps it would have been better to devote less space to the older masters, including Bach and Handel, and more to the moderns, who have been less written about. But the writer might retort that the older masters are still more in vogue than the later ones, because they have never been equalled in this branch of music. Unlike orchestral music, choral music is chiefly in the hands of amateurs, and it is to such that Mr. Mees addresses himself. Special chapters are devoted to the history of amateur choral culture in England, Germany, and America, and the final chapter deals with the chorus in general and chorus conducting; this includes many practical hints. Mr. Mees's volume is the fourth in Scribner's "Music Lover's Library."

Ellen Orr is the translator of Camille Bellaigue's 'Musical Studies and Silhouettes.' The best chapter in it is the one on "Beethoven and his Nine Symphonies," though it contains nothing new or brilliant. There are good things in the chapter on Italian music and Verdi's last two operas; and the one on the Italian sources of Gluck's "Orpheus" appeals to students of history. The long section entitled "Sociology in Music" is rambling, rhapsodic matter that is neither particularly entertaining nor instructive. "The Exotic in Music" is apropos of Saint-Saëns. The "Silhouettes" are a series of brief sketches of great masters which have no special *raison d'être*.

A new volume on Handel seems hardly to supply a long-felt want, yet while Handel remains the greatest of "English" composers, books on him will continue to pour from the London press. The amateurs for whom Mr. Mees's book was written will find Mr. Williams's useful, too, and at the same time entertaining, with plenty of anecdotes. The vexed subject of "additional accompaniments" is sensibly treated, but something more ought to have been said about Robert Franz's services to Handel. It will amuse—or possibly annoy—the Handelites to read (p. 229) that their idol, like Wagner, was charged with being inordinately "noisy." "How this would have delighted Handel!" the King once exclaimed to Lord Pembroke, after a thunderclap had burst right over their heads.

Through Siberia. By J. Stadling. Edited by F. H. H. Guillemard. E. P. Dutton & Co. 1901. 8vo, pp. xvi, 315, with 47 cuts and 2 maps.

The author of this volume is favorably known as one of the party who at the time of famine in Russia, a few years ago, as a volunteer assistant to the Tolstoys and others, devoted his time and energies to the work of succor. He was also a friend of Andrée, and accompanied him to Spitzbergen on both his preliminary and his final journey. When the long months had passed with no news from the balloon party, it was thought good that some one should journey to the northern coast of Siberia in the vicinity of the Taimyr peninsula to see if any news of Andrée had been received there, and to warn the aborigines to be on the lookout for the balloon and its passengers, living or dead. At the request of the Swedish Society for Geography and Anthropology, Mr. Stadling agreed to undertake this journey, for which private subscription and the "Vega-stipendium" supplied the necessary funds. He was accompanied to the lower Lena by Mr. Nilson, a botanist desirous of exploring the tundra flora, and had, during the whole journey, the companionship of Mr. H. Fraenkel, a brother of Knut Fraenkel of the Andrée balloon party. The plan, in general, was to proceed to Irkutsk and down the Lena to the Arctic Coast, thence westward along the shores to the Taimyr peninsula, across it to the mouth of the Yenisei, and then southward along this river, regaining their original route at Krasnoyarsk.

The difficulty and danger of the journey will be well understood by those who have read the story of the *Jeannette* expedition and its attempted rescue. The Arctic part of it was accomplished in early winter by the self-sacrifice of some of the heathen natives, who responded to the plea that the travellers were seeking their lost brethren, though they had refused to undertake the transport for reward alone. Leaving Stockholm in April, 1898, and having their work facilitated in every way by cordial concurrence of the Russian authorities, they reached home again after the lapse of eight months, without obtaining any news of Andrée, but having prepared the natives for his cordial reception if he should come, and with the satisfaction that everything possible had been done for the welfare of the lost explorers.

Mr. Stadling's narrative is not cast in the form of a diary or itinerary, and is more readable on that account. He gives the main incidents of the journey as they occurred, but in general his chapters take the form of a description of natural and sociological conditions in the region and among the people visited, with some supplementary considerations on the general state of Siberia and its colonization, the exile system and its effects. It is probable that conditions have improved in the two years which have elapsed since Mr. Stadling's journey, but a recent traveller confirms his account of them as essentially accurate. When one remembers that, for a century, into a sparsely populated territory, there has been poured a constantly increasing flood of thieves, murderers, and less serious misdemeanants, especially incorrigible drunkards, it should not surprise us to find that the best efforts of the respectable Siberians have not succeeded in maintaining public morals at an even tolerable level. Accustomed as we are to the security of American express-trains, it is something of a shock to learn that on the Trans-Siberian line some one must constantly watch the baggage to prevent theft while the traveller is stretching his legs on the platform or drinking a cup of tea at a station restaurant. That lying as a fine art, for the mere pleasure of the imagination, is a favorite amusement, has long been known as a Siberian trait, but the frequency of crimes of violence, even in the larger cities, is not generally realized except by students of sociology.

For instance, in the city of Tomsk, which has a fine museum and university, not long since the official records showed, between July 1 and October 7, no less than 30 cases of murder and robbery, and, during another period of three months, 58 crimes of the same kind had been committed. From the official statistics it appears that in many places more than half the number of crimes are committed by exiles, though the latter form only 6 per cent. of the population; that the worst crimes, such as murder, occupy the first place on the list; that counterfeiting, introduced by runaway prisoners, has spread immensely among the peasantry; that the increase in crime is far in advance of the increase in population, and is accelerating from year to year in an appalling manner. It is no wonder that the cry for relief of the best Siberian residents has at last penetrated to the ears of the Czar. We find, from Stadling's unsensational statements, that the evils with which we are familiar in our own frontier regions reappear in Siberia immensely aggravated by the lawlessness and ignorance of the population, the corruption of officials, and the incubus of the exile system; as, indeed, would be expected from the history of transportation of criminals in other countries. One hopes for amelioration from the great flood of peasant immigration which has followed the opening of the railway, and doubtless this hope will in time be realized; but, for the present, the conditions are most painful, and seriously complicated by difficulties due to uncertainty of what may be called land-titles.

In early days, land being practically worthless, settlers were permitted to squat where they chose, and, naturally, picked out the best spots, or tried one place, and, after exhausting its resources, selected another; all this without acquiring any valid title. Now bodies of emigrants sometimes arrive at a piece of land officially allotted to them and find it perhaps stripped of its timber, and the soil exhausted; or, on the other hand, occupied and improved by tenants in possession for many years. Violent conflicts, legal or physical, are the natural consequence. Final decisions being dependent upon the dicta of an ill-paid and often corrupt staff of local officials, the results may be imagined. Add to this the denial of initiative, which has rendered the peasant emigrant helpless for centuries under an absolute Government, and the failure of justice which is likely to follow under such conditions becomes almost a certainty. On the whole, anticipations in regard to the progress and welfare of the new Siberian population are not bright, and betterment will come but slowly. In many parts of Siberia it would seem as if regeneration were more likely to come through the aboriginal population, such as the Buriats, who, by the testimony of travellers, possess elements of character superior to those of the so-called civilized and Christian immigrants. Among the weaker peoples of the North, wanderers over a bleak and barren expanse of tundra, the effect of contact with the trader and his liquor has been most demoralizing, as often witnessed on our own frontier. The converted natives are naturally the worst, and one pathetic incident is mentioned by Stadling of a heathen mother warning her son, about to depart on a journey, not to be led into vicious ways by his Christian associates!

The most important lesson to be learned from the statement of conditions in Siberia given by our author is that the civilization and development of that vast and almost virgin territory is not likely to parallel the

growth and results obtained under other conditions by the Anglo-Saxon in Australia or the great West of America; and the competition of Siberia in the markets of the world is hardly likely to be perceptible for many years to come. The elements for a real regeneration do not at present appear to exist, and are certainly too feeble to warrant the belief in any very rapid change. That the eternal years of God will eventually bring them, we have no right to doubt, and for that, however gloomy the outlook, every patriotic Russian must continue to work and pray.

The Council of Constance to the Death of John Hus. By James Hamilton Wylie, M.A. Longmans, Green & Co. 1900.

Mr. Wylie's 'Council of Constance,' like Dr. Ward's 'Great Britain and Hanover,' represents a course of Ford Lectures at Oxford. This fact, apparently of slight importance, is significant, for it has a direct bearing on the author's manner of expressing himself. In his 'History of England under Henry the Fourth' Mr. Wylie pays no attention whatever to the public, even to the educated public. He writes for scholars only, and gives them unvarnished "results." But here, in his lectures, he becomes much more popular, and shows a keen wit which could hardly have been suspected by readers of his previous volumes. His choice of a subject may be likened to that of Mr. Gardiner when he wrote a book about the Thirty Years' War. The relations between English and Continental history have not, on the whole, been sufficiently accentuated. Just as Mr. Gardiner was led by his own special work on the early Stuart period to master the main features of political activity in France, Germany, and Spain, Mr. Wylie has been brought into close contact with the Great Schism and other disturbances in the Latin Church during the reign of Henry IV. Hence, doubtless, this volume.

The Council of Constance was the most important gathering of the Western Church which was held between the Fourth Lateran Council and the opening sessions of the Council of Trent. From the nature of the issues presented to it and from its distinguished personnel, it surpasses the other general councils of the fifteenth century, Pisa and Basel, while the part of the Emperor Sigismund in securing its summons and watching over its transactions brings it into close relations with the Holy Roman Empire. But did the Council preserve a high tone, and was its work beneficent? Are we to exalt its leading men and call them eagles of the faith, or must we consider that in many respects the Council fell short of its opportunities? These are questions which arise after the importance of the assembly has been admitted, and they are inevitably suggested by Mr. Wylie's description of many scenes which occurred between the arrival of John XXIII. and the death of John Huss. Dr. Creighton points out how entire was the failure of the Council to accomplish any permanent results, but he has a higher opinion of its collective wisdom and virtue than that which Mr. Wylie professes.

The motive of these lectures is very simple. Mr. Wylie heightens the contrast between the lenient action of the Council towards John XXIII. and its animosity towards Huss by throwing other matters into the background. It is not only that "an infallible Council awakened to the discovery that they had been worshipping a mole, and that the man whose feet they had lately kissed as their Most Holy Father was a rogue and a liar, who had run away from his post with shame and dishonor, and whose record was so bad that contemporary chroniclers would not pollute their pages with describing it for fear of imperilling their readers' souls." Mr. Wylie puts the case more strongly still when, after reciting the dreadful list of charges which was brought against the Pope, he says: "To this each of the nations recorded its solemn Placet, though John Huss was right when he guessed that if Jesus had been present and had said: 'He that is without simony amongst you, let him cast the first stone,' all present must have left their seats and walked out of the church." Moreover, after accepting these vile accusations and deposing John XXIII., the Council left him in case to be partially rehabilitated. He was reconciled with Martin V., the Pope whom the Council chose, and died Cardinal of Frascati.

Coming to Huss, Mr. Wylie has little sympathy with the view that the Council must not be blamed for his execution because it acted according to law, or even with liberality towards the accused. Leaving aside the old strain of vilification, like that of Dobneck, he criticises the modern brief against Huss by saying: "And yet, after all, there seems to be an uneasy feeling that there is something faulty somewhere in this otherwise neat presentment, for we are still called upon invariably to remember that the action of the Council is not to be judged by the standard of the present day." Mr. Wylie accepts the fifteenth-century standard, and points, on the one hand, to the "churchmen who saw no need for any apologetic excuses to explain away their cruelty," on the other, to Bohemia enraged at Sigismund's breach of faith and expressing its feeling by a desperate war. His conclusion concerning the whole matter is, that Sigismund had the power to protect Huss, and was guilty of dishonor in not abiding by the pledge of safety which he gave. "Those writers, therefore, in my opinion, have best gauged the essence of the story of John Hus who see in it a struggle for supremacy between the right of the State to protect freedom of thought, and the right of the Church to repress the heretic, resulting in an unconditional surrender of the former."

This is the theoretical side, but Mr. Wylie never gets far away from the practical and personal issues. When speaking of the controversy which raged between Romanists and Protestants in the sixteenth century over the question of Huss's trial and death, he says: "Thus was built up throughout Europe a bulky, barren bibliography of alternate encomium and abuse, and it took nearly 200 years more before attention was forced to the repulsive fact that the Church had dealt leniently with an orthodox Pope of scandalous life, and hardened itself into savage cruelty towards a misbeliever whose moral life was beyond all shadow of reproach." He cannot forgive a Council which, under whatever plea, treated John XXIII. and John Huss so differently.

Mr. Wylie still further diminishes the prestige of the Council by reciting details which show the secular and profane spirit of life at Constance. "Each of the great lords had brought his minstrelsy, and the streets echoed with hundreds of fifes, trumpets, bagpipes, and viols; no business was done on feast days, when everything gave place to the jongleurs and players. . . . Every day the courtyard of the Apostolic Palace was alive with tilting and a vertigo of shouts, while scarce a week went by without its ridings, feasts, dances, tournaments, and processions." He keeps the attention fixed on unseemly bickerings between Pope and Emperor, nebulous discussions, and hairsplitting metaphysics. Among the doctors assembled to secure reform in head and members there is none for whom he has any great reverence. Zabarella seems to hold his respect, but, without attacking D'Ailli or Gerson, he mentions them slightly. *E. g.*, "The absence of the Pope presented a technical difficulty, and D'Ailli was shy of granting a process on the ground that the question was one for lawyers, and so the deadlock continued in a cloud of words." And of Gerson: "Processions were accordingly ordered for every Sunday while the King was away, excommunication was pronounced against all who should impede him on the road, and Gerson preached a send-off sermon in which he prayed that the angels would bear him up in their hands lest at any time he should dash his foot against a stone."

We have read Mr. Wylie's lectures with close attention, partly because they are original, and partly because they are entertaining. As a sketch of the Council, even down to the point proposed, they are by no means exhaustive, and their treatment of theological topics is inclined to be a little flippant. Mr. Wylie presents strongly a few aspects of a complicated episode. He satirizes the action of the Council towards John XXIII., he will not palliate its cruelty towards Huss, and he makes one see vividly how many lines of human interest converge to that great assembly which met on the shore of the Boden See.

The Teaching of Latin and Greek in the Secondary School. By C. E. Bennett and A. P. Bristol. Longmans, Green & Co. 1901. Pp. 336.

Six hundred years ago, in the earlier Renaissance, John of Salisbury fought a good fight for classical studies, and his arguments have hardly been bettered by those who today take up the cudgels for Latin and Greek. Prof. Bennett, who is responsible for about two-thirds of the work before us, devotes fifty pages to an apologia for Latin. Academic discussions of the disciplinary value of Latin are little likely to raise the percentage of students of the subject, and it is a fact that the present enormous and rather surprising increase in the number of Latin pupils in secondary schools in America is taking place in the teeth of an opposition to classical studies better organized, and equipped with stronger arguments, than ever before. The writer who declared in the *Popular Science Monthly* that the Greeks "surpassed the world in philosophical acuteness" simply because they did not study foreign languages, is hardly an alarming foe; but such men as the late Prof. Boyesen in this country, Herbert Spencer and Bain in England, and Paulsen in Germany, are not to be so lightly dismissed.

Prof. Bennett recognizes that, in America, the problem must be envisaged quite otherwise than in Germany. A German

schoolboy, when he leaves his gymnasium for the University, has studied Latin for at least nine, and Greek for six, years. The amount of work devoted to the classics in this period and the facility acquired seem almost incredible to the secondary-school teacher in America, unless, indeed, he has been enlightened by Prof. Münsterberg's caustic indictment of American school training in a number of last year's *Atlantic Monthly*. But the Germans may well pause to ask whether, in these days of increasing interest in scientific research, the value gained is proportionate to the length and costliness of their classical training. In England, as Prof. Bennett might have shown, the case is much the same. There, from the age of eight, or often earlier, Latin is the schoolboy's daily study, Greek following with little delay; for the last two or three years of his school-work, if the boy be intended for a classical course at college, his time is almost wholly devoted to Greek and Latin; and his school training is the preliminary to three or four years at the University of specialization in the classics, to the exclusion of every other branch of knowledge. The excellent effect of such studies on his English style has been illustrated by many an English writer who had had no other training in English composition than comes from translating; style naturally counting for almost everything in the school and University ideal of a perfect translation. The value of such an exercise as a training in the vernacular is admirably emphasized by Prof. Bennett (p. 22). It cannot be denied that this sort of training has a narrowing effect on all but the best minds. In this country, however, there is no danger of narrowness, and the question is whether the "small Latin and less Greek" that can be acquired in so varied a curriculum as is demanded by the American ideal of a general education, has any worth except for disciplining the mind.

Professor Bennett frankly rejects the notion that the average educated man will, in later life, devote any portion of his leisure to the Latin authors. He therefore falls back on his conviction, which we share, that "Latin is not only the best single instrument, but practically an indispensable instrument" in secondary education; which is, from its nature, disciplinary. His defence is well reasoned, and will appeal to all but the prejudiced, who, in any case, are quite unlikely to read it. Professor Bennett proceeds to examine certain text-books and methods now in vogue, and here it is a case of ἔνδον ὁ πόλεμος. The modern Beginner's Book as a substitute for the old-fashioned grammar and reader is attacked as unsystematic and "pedagogically unsound" (p. 53); to the Beginner's Book is traced the conspicuous inferiority of Latin students turned out nowadays, even from the best New England preparatory schools, to the pupils of twenty years ago in the matter of precise knowledge of Latin grammar. It is to be hoped that all secondary teachers of Latin will consider this impeachment of a type of book whose insidious popularity is, we fear, due partly to the fact that it materially lightens the teacher's work. The so-called "Inductive Method" is condemned for much the same defects as the Beginner's Book, and it is pointed out that even the name is a misnomer, as the process is truly deductive. Professor Bennett's attitude towards the Roman pronunciation now in vogue is decidedly pessimistic. His advice to teachers is to recognize and admire it in its perfection, but to adopt an easier pronunciation, which pupils will be more likely to use with consistency. We cannot agree with Professor Bennett that the "sober, conservative sense of . . . English educators has thus far resisted . . . this unwise spirit of innovation." The old-fashioned "English" pronunciation of Latin is rapidly falling into disuse in England, both for schools and for universities. Professor Bennett's counsel of despair is much as though one should advise an Englishman to cultivate a "Stratford-atte-Bowe" accent for French because he can never hope to attain to the Parisian standard.

We have not space to dwell on Professor Bennett's interesting discussions of the Latin authors to be read in secondary schools, the general conduct of the Latin work, and the teaching of Latin composition, though on all these points his remarks invite commendation for the most part, and here and there criticism. His discussion of Latin prosody, however (pp. 175-190), calls for special comment. In 1898-9 Professor Bennett, in the *American Journal of Philology*, developed at length, and with much citation of ancient grammarians, his view that, in Latin poetry, "ictus" is not stress; that Latin is, like French, a language of level stress; that Latin poetry must be read precisely like prose, *i. e.*, without rhythmic stress. His position was vigorously attacked, in the same journal, by Professor Hendrickson, who had the last word of a controversy now revived by Professor Bennett. The articles of both disputants in the *Journal* are an amusing illustration of the incapacity of the philologian to see his opponent's point of view, combined with a faculty of drawing quite opposite conclusions from the same evidence. The general consensus appears to be against Professor Bennett's theory; and he certainly has not, so far, explained how on his theory he would scan with rhythmic effect a set of Latin anapæsts in which the rhythm actually depends on stressing the second (*i. e.*, short) syllable of the dactyl. We dwell on this point because it seems unfortunate that a writer of Professor Bennett's authority should urge secondary-school teachers to adopt an innovation, so important, that has not received the adherence of classical scholars.

Professor Bristol's share of the book is less open to controversy. He does not make a systematic defence of Greek, though it would seem to be more necessary than in the case of Latin. His section contains many useful hints for the conduct of elementary Greek work. Most teachers will agree with him that the Odyssey would be better than the Iliad for beginners in Homer, and that almost any early dialogue of Plato is more suitable than the 'Apology' so generally read as an introduction to Plato's style and philosophy. Few, we believe, will commend his advice to the elementary student to read the New Testament with his Xenophon and Homer. The beginner's notions of Greek syntax are confused by the comparison of Homer and Xenophon. He would gain nothing by being confronted, at this stage, with the eccentricities of post-classical Greek.

The work as a whole should be in the hands of every secondary teacher, who will find much to applaud, much to ponder, and much to stimulate criticism. On p. 189 the reference to Professor Bennett's article should read p. 361 instead of 316.

Selections from Dante's Divina Commedia, Chosen, Translated, and Annotated by Richard James Cross. Henry Holt & Co.

In his preface to this attractive little volume, Mr. Cross almost apologizes for undertaking, at this late day, "to make a contribution, however small, to the enormous mass of Dante literature"; and there was reason for his scruples. Translations of the 'Divine Comedy' exist in abundance, and more than twenty volumes of selections—chrestomathies for students, dictionaries of familiar quotations, calendars, and what not—have been published in the last twenty years. But Mr. Cross's book differs in plan and purpose from any of the others with which we have compared it, and the work has been executed by both translator and publisher with a taste and skill which justify the undertaking. The translations are in prose and adhere very closely to the original. In fact, Mr. Cross appears to agree substantially with Professor Norton as to the most effective way of interpreting Dante to English readers; and, like Mr. Norton, while discarding all the adornments which a metrical version might permit, and depending solely upon the interest and import of Dante's thought, he has at the same time succeeded in keeping much of the spirit of the poem.

The book is intended for two classes of readers—for those who have no knowledge of Italian and would hardly have the patience to read the whole poem in translation, and for those students of the original who may find in the volume "all, or nearly all, the descriptions, the similes, the profound reflections that have most vividly impressed them, and may be glad to have in small compass the great thoughts that have become familiar to them." The second of the author's purposes is, in our opinion, more likely to be successfully served than the first, for Dante's best passages are not so easily detached from their context as those of many other poets, and, when they are thus detached, it is doubly hard to make them clear in a translation. Considering the wealth of reflection in the 'Divine Comedy,' it is surprising that the poem does not contain more *sententiæ*, more lines and passages which can stand alone and carry a clear general meaning. But, for various reasons, Dante's style in this respect is very different from Shakspere's, and few of his lines (comparatively speaking) are dissociated in one's memory from the places in which they occur. Some of Mr. Cross's selections will therefore have, in spite of his judicious notes, very little meaning or interest for the general English reader. Students of the poet, on the other hand, will often be grateful for this volume of selections and will turn over its pages with delight. To say that they will occasionally miss their favorite passages (they will look in vain, for example, for the description of Leah and Rachel in the Earthly Paradise, or for the account of Dante's last glimpse of Beatrice in heaven, or for the hymn to the Virgin at the end of the "Paradiso"), is only to say that no two compilers would have chosen alike. Mr. Cross had at least a method in his selection, having taken chiefly, he says, passages "which appeared to breathe more

of the modern than the mediæval spirit, and for which, therefore, a satisfactory English equivalent might more readily be found."

Penelope's Irish Experiences. By Kate Douglas Wiggin. Boston: Houghton, Mifflin & Co. 1901. Pp. vi, 327.

Penelope and her friends here cross St. George's Channel to Ireland, in search of adventures such as, already recounted concerning England and Scotland, have delighted a large circle of readers. Whether it is that England presents a wider or was a fresher field, after perusal of the present volume we are still of the opinion that Mrs. Riggs's experiences there were the richest. The narrative reads better than when appearing in serial form. We are not compelled to centre ourselves upon particular chapters that may not please, but are left free to choose those which do. The love story intertwined to meet the general taste of readers of light literature is of the most airy character, though it does end to the strains of a bridal march in a cathedral.

The book has its faults. The domestic arrangements at Mrs. Duddy's Hotel and Knockarney House should have been hinted at, not described. Doubtless Mrs. Riggs met such in Ireland, though we never have. But, true or imaginary, they might better have been left unparticularized, like many other mundane horrors. Occasionally, in generalization, our authoress treads on delicate ground. In so far as Irishmen, high or low, may appear different from the inhabitants of other countries, it is less in the blood than in the surroundings. And Alfred Austin is a singularly unsafe guide in Irish generalizations. Mrs. Riggs was never more mistaken than when fancying that "there is scarcely a country on the map in which one could be more foolish without being found out." There are, in truth, no keener sticklers for proprieties than the Irish peasantry, and the supreme foolishness of travellers who indulge in foolish pranks in Ireland is in supposing they are not seen through.

Our author is singularly happy in the selection of snatches of Irish song and passages from Irish legends woven into her narrative. Some of her touches are inimitable, as in the scene at the railway station, where the porter solemnly announces: "This thrain never shtops! This thrain never shtops!"—or in a village, "wan of the natest towns in the ring of Ireland, for if ye made a slip in the street of it, be the help of God ye were always sure to fall into a public house!" Mrs. Riggs excels in descriptions of the natural beauties of the country:

"In dazzling glory, in richness of color, there is nothing in Nature that we can compare with this [the gorse], loveliest and commonest of all wayside weeds. The gleaming wealth of the Klondyke would make but a poor show beside a single Irish hedgerow; one would think that Mother Earth had stored in her bosom all the sunniest gleams of bygone summers, and was now giving them back to the sun king from whom she borrowed them."

She has genuine appreciation of and feeling for the people:

"All is silent, and the blue haze of the peat smoke curls up from the thatch. Lisdara's young people have mostly gone to the Big Country; and how many tears have dropped on the path we are treading, as Peggy and Mary, Cormac and Miles, with a wooden box in the donkey-cart behind them, or perhaps with only a bundle hanging from a blackthorn stick, have come down the hill to seek their fortune. . . . They are used to poverty and hardship and hunger, and, although they are going quite penniless to a new country, sure it can be no worse than the old."

Penelope must have been in Ireland but a short year ago from the date at which we write. All appeared loyalty and enthusiasm concerning the Queen. She has passed from earth. The Irish question again stands out in some of its grimmest features. It is well we have writings in "lighter vein," such as this, to enliven our thoughts concerning the "Dark Rosaleen."

New York in Fiction. By Arthur Bartlett Maurice. Dodd, Mead & Co.

"How much Art has done for Nature," exclaimed an old lady on hearing a modern decorator gush over the ignored pussy-willow of her own youth. So might one say of Mr. Maurice's 'New York in Fiction,' "How much story-writers have done for this city!" After reading the exhaustive bibliography of its fiction and the exhaustive identifications of sites and buildings and cafés and dwellings with those mentioned in the works of the New York school, from Hopkinson Smith to E. W. Townsend (with references to a few ancients like Cooper and Irving), one almost feels that these gentlemen invented New York, so vital it appears to determine in what house on Washington Square Crawford's Lauderdales lived, and where Chimmie Fadden abode after becoming footman to "His Whiskers." The writer has a message and a prophecy, to the effect that the coming great American novel ought to be and will be a novel of politics, and sighs for the writer who will draw fulness of inspiration from the boarding-house. Meantime, his principal office is that of guide, and, we fancy, a trustworthy one. He and his pretty volume, with its many attractive photographs, take us equally through New York and through its modern literature. It will doubtless inspire its readers to exploratory prowls, their Brander Matthews and Richard Harding Davis in hand like so many red Baedekers, while they insert mental tablets in the walls of the flat-house where Neuman murdered his betrothed, and upon the path where took place the runaway described in 'The Honourable Peter Stirling.' And this will be as it should, since Mr. Maurice says that if his book "provokes one reader to a closer acquaintance with the rear tenements of New York, it will not have lived in vain."

BOOKS OF THE WEEK.

Adams, J. C. Nature Studies in Berkshire. G. P. Putnam's Sons. $2.50.
Altsheler, J. A. The Wilderness Road. D. Appleton & Co. $1.50.

Striking New Novels

Marnan's Daughter of the Veldt.

350 pp., 12mo, $1.50.

A powerful tale of the Transvaal, before the War. The author makes the Veldt itself share the honors with its daughter, and shows how it instills much of its own wildness into those who dwell upon it.

Oxenham's Our Lady of Deliverance

334 pp., 12mo, $1.50.

The "Lady" of the title is the sister of an unjustly persecuted French army officer. An Englishman arrives on the scene, and, after much clever manœuvring and many risks, proves the *deus ex machina.*

A Readable Book on Monopolies.

Monopolies Past and Present

BY

JAMES EDWARD LE ROSSIGNOL, Ph.D.,

Professor of Economics in the University of Denver. Special Lecturer in Economics in McGill University.

12mo, $1.25

For the use of busy men who may wish to find in a single brief work a digest of a mass of information only to be obtained in a number of special treatises.

Contents—The Nature of Monopoly—Monopolies in Ancient and Mediæval Times—Gilds as Monopolies—Exclusive Trading Companies—Patents and Copyrights — Municipal Monopolies — Railways as Monopolies — Capitalistic Monopolies.

"With all that has been written on the subject of monopolies, it seems to have remained for Prof. Le Rossignol to write a *popular* book on the subject. . . . His volume is not only immensely instructive, but deeply interesting. . . . Such a work is of great value at the present time, and fortunately it is written in a style that everybody can understand and enjoy."—*Boston Transcript.*

NEW PUBLICATIONS

A Dream of Empire

or, The House of Blennerhassett

By WILLIAM HENRY VENABLE, LL.D., author of "A History of the United States," etc. 12mo, cloth, $1.50.

The reader follows Aaron Burr on his trip down the Ohio River, in the course of which he seeks out Harman Blennerhassett, and enlists him in his political enterprise of founding an empire in the Southwest. Chester Arlington, a companion of Burr on his Southern trip, falls deeply in love with Evaleen Hale, Mrs. Blennerhassett's most intimate friend, but this case of true love for a long time follows the traditional course. An abduction and a timely rescue by Arlington, however, go far towards setting matters straight. The volume should prove of the utmost interest both for the novel reader and the historian.

The Life of the Bee

By M. MAETERLINCK, author of "Wisdom and Destiny." Translated by Alfred Sutro. 12mo, cloth, $1.40 net.

This book deals with the life of the bee, treated in Maeterlinck's own peculiar vein. It is by no means technical; passages of the highest lyrical beauty abound, while reflections, analogies, and poetical digressions are not wanting. It will appeal to all who value Maeterlinck's works. It must be regarded as a work of the most fascinating description.

The Crow's Nest

By MRS. EVERARD COTES (Sara Jeanette Duncan), author of "An American Girl in London," etc. 12mo, cloth, $1.25.

This is a novel of manners. The locality is a mountain top of the Himalayas, Simla, the summer headquarters of the Government of India. With many a quaint and fanciful conceit, Mrs. Cotes sets forth most convincingly the charm of what she calls "this irresponsible impious little paradise." All lovers of out-door life—of nature, of birds, of flowers (and their name is legion)—will be greatly interested, as well as amused, in this charming book.

The Macmillan Company Has Just Published

AN AMERICAN NOVEL

Two years ago to-day Mr. Winston Churchill's Richard Carvel was published—the most successful novel of its kind ever issued.

One week ago to-day Mr. Churchill published his new novel—

THE CRISIS

The Best Story This Author Has Yet Written

During the past week the publishers have been watching the comments of the Press with deep interest, and they have not yet seen a single adverse criticism.

Out of the many notices already received, the publishers take the liberty of quoting a few

Opinions of the Press:

Mr. Winston Churchill has gained greatly in the power of making a character live and breathe before your eyes, and reveal its own personality through its part in conversation and through its deeds.—***Boston Herald.***

The love story is charmingly told. Mr. Churchill, it must be acknowledged, has scored a distinct success with this book. It is full of brilliant bits, clever epigrams, flashing analysis, and displays withal a broad grasp upon the meaning of things as they stood related to events and to history in those dark years of the nation's travail. It is not too much to say that it is the best novel founded on the civil war period that has yet been published.—***Brooklyn Daily Eagle.***

A book that presents the great crisis in our national life with splendid power and with a sympathy, a sincerity, and a patriotism that are inspiring. The several scenes in the book in which Abraham Lincoln figures must be read in their entirety, for they give a picture of that great, magnetic, lovable man which has been drawn with evident affection and exceptional success.—***Chicago Tribune.***

The reader is swept along by a relentless series of events towards the inevitable crash which shook the Nation. Men, then obscure, whose names now will ring till the end of time, pass simply and naturally through these pages.—***The Bookman.***

He has followed no master here, however great; he stands on his own merits, and will be found to stand firmly, we believe, in popular favor. As a picture of the conditions of the period of storm and stress of our civil war it has enduring value.—***New York Mail and Express.***

THE CRISIS is a book which it is a pleasure to recommend. It promises to be one of the popular successes, and, unlike a good many popular successes, it really deserves to succeed.—***New York Commercial Advertiser.***

"Above all 'The Crisis' is a book every American should know, for it teaches him anew to revere the memory of the men to whom this nation owes its continued existence, to bow in gratitude to even the least of them who struggled on the hustings and in daily life, or later shouldered a musket that this nation, under God, should have a new birth of freedom, and that government of the people, by the people, for the people, should not perish from the earth."—*New York Mail and Express.*

The great popularity of "Richard Carvel," 375,000 copies of this novel having been sold, has led the publishers to print 100,000 copies for the first edition of "The Crisis."
The first orders will consume the entire stock.

The book has eight charming illustrations by HOWARD CHANDLER CHRISTY.

In size and style it is uniform with "Richard Carvel," being a 12mo, cloth, gilt top. Price $1.50.

NEW YORK, THURSDAY, MAY 30, 1901.

The Week.

Secretary Root's silence, in the face of all that it is asserted he did say and did not say to the Cubans, is not a little remarkable. The report before the Cuban Convention recites certain interpretations of the Platt amendment which, it is added, Mr. Root, "being authorized by President McKinley," gave to the visiting Cubans, and on the strength of which the Platt amendment is to be accepted, if at all. But the Secretary's newspaper friends indignantly deny that he committed himself to anything of the kind. They affirm that it is preposterous to suppose the United States will agree to the provisos which the Cubans are adding, on Mr. Root's alleged authority, to the Platt amendment. Now, it seems only fair that the Secretary of War should let the public know whether he did make to the Cubans the promises they say he did, and to declare explicitly whether the proposed Cuban form of acceptance will be so satisfactory that the troops will be withdrawn under it. In the report of the Cuban delegates they state that they asked Secretary Root to put his assurances in a written form, and that he promised to do so. Apparently, he thought better of it afterwards. There is historic counsel to politicians, never to write a letter. But is there any good reason why Mr. Root should not give to his interested fellow-countrymen an official version of what took place? He must see that, as long as he keeps silent, we are bound to believe, in spite of the incredulous sniffs of his journalistic supporters, that the Cuban account of his promises is correct.

Gov. Allen's declaration that the only way for us to govern Porto Rico is to rule it as the Dutch do Java or the English Bermuda, is the flattest possible contradiction of President McKinley's famous deliverance, "There is no such thing as American Imperialism." To hold crown colonies is perhaps not Imperialism as deep as a well nor as broad as a barn-door, but it will do. To say nothing of the political unwisdom of the Governor of Porto Rico's announcement that the inhabitants of the island are to be deprived of even the measure of self-government we have given them, we think he would have been more discreet if he had waited to find out (1) whether the Supreme Court would permit the establishment of crown colonies, and (2) whether, even if Constitutional, the people of this country would tolerate them. But the rashness with which such un-American projects are broached by our island officials shows what kind of schemes are buzzing in their heads. If the President has not already privately advised Gov. Allen to leave off his indiscreet talk about turning Porto Rico into a Java, it is high time he did.

Much significance will attach to the filling of the vacancy in the chairmanship of the Senate Foreign Relations Committee caused by the death of Mr. Davis of Minnesota, because of its bearing on the tariff policy of the Republican party at the next session of Congress. The second name on the old list was that of Mr. Frye of Maine; the third, Mr. Cullom of Illinois; and the fourth, Mr. Lodge of Massachusetts. The last named is ambitious to secure the chairmanship, while Mr. Frye is understood not to wish it. The question, therefore, would be between the Massachusetts Senator and Mr. Cullom, and the latter might make his chairmanship of the Interstate Commerce Committee a reason for not taking the promotion to the Foreign Relations Committee, as Mr. Frye makes his primacy in the Commerce Committee. It is understood, however, that Mr. Cullom desires the chairmanship of the Committee which has come to be in some respects the most important in the Senate; and as all the precedents sustain his advancement, it will doubtless be made.

The importance of this choice rests in the fact that Mr. Lodge has been, perhaps, the most earnest opponent of the reciprocity policy in the Senate of late years, while Mr. Cullom has become convinced that both the commercial interests of the nation and the political interests of the Republican party demand the ratification of such treaties as were shelved during the last Congress. It was announced by the *Evening Post's* Washington correspondent a fortnight ago that Mr. Cullom had called upon Mr. Kasson, who negotiated the treaties which were treated so contemptuously by the Senate, and assured him that he might count upon better luck next winter. A more recent dispatch from the same correspondent shows how much in earnest Mr. Cullom is in this matter. The New York correspondent of the Philadelphia *Press* reports that not only is the predominating opinion in the more important commercial circles of this city in favor of the ratification of reciprocity treaties, but it has been discovered that in other States even more reliably Republican than New York "a sentiment is rapidly growing, not only among men whose vocation is politics, but among those who are engaged in industrial pursuits, that the time is at hand when the Republican party must either submit to an attack upon its protective policy—an attack that might assume dangerous proportions—or else must consent to such modification of that policy as is to be discovered in reciprocity agreements." The same correspondent reports New York friends of Senator Allison of Iowa as saying that he has discovered that a very strong sentiment exists in the West, and especially in the Mississippi Valley, in favor of the ratification of reciprocity treaties as soon as possible after Congress meets next winter. All of which is most encouraging news.

South Carolina again, as so often before, challenges the attention of the nation by its sensational politics. That both of a State's Senators should resign their seats at the same time is an event without parallel in our history, except for the Conkling and Platt performance, twenty years ago this very month. The issue in this later case is much more worthy of the action than was the petty controversy over Federal patronage between the New York Senators and the Garfield Administration, twenty years ago. Mr. McLaurin was elected as a Democrat, but if he had been a Republican, his course during the last Congress could hardly have been different from what it was. He sustained the McKinley Administration on the peace treaty, the Porto Rico Bill, the Platt amendment regarding Cuba, the Philippine legislation, and the Shipping-Subsidy Bill. That a man with such a record should call himself a Democrat is certainly most anomalous. Fair-minded people have felt as though the only manly thing for Mr. McLaurin to do, under the circumstances, was to resign his seat and let the voters of his party say whether he correctly represented them in this extraordinary course, and Mr. Tillman finally forced him to do so on Saturday by accepting the challenge, made during a joint debate, that he should resign himself.

It is quite impossible for any outsider to express an intelligent opinion as to what is likely to happen in a situation which evidently puzzles the best informed people in South Carolina. Mr. McLaurin's term would have ended in March, 1903, while Mr. Tillman's began only last March. Both naturally will seek reëlection for the term which lasts until March 4, 1907, and they would like to have all other ambitious politicians hold their hands off. But there are many men in the State who want to go to the Senate, and it would not be strange if Tillman and McLaurin have the same ex-

perience as Conkling and Platt in finding unexpected rivals turn up. Popular interest throughout the country will hinge upon the fate of the senior Senator, who has become a national character, while McLaurin was never heard of outside his State until he virtually changed his party. It became evident last year that Tillman had already lost some measure of the wonderful hold upon the Democratic masses which he obtained during his rise to power. There was no candidate against him in the Democratic primaries, where the Senatorial question is always settled (the action of the legislators there chosen being a mere formality), but he asked those who did not like him to "scratch" his name, and more than a third of the party did so. This suggests at least the possibility that he may not have perfectly smooth sailing this year.

The Supreme Court of Pennsylvania has decided that, under the Constitution of that State, there are practically no limits to interference with the government of cities on the part of the State —which means, under existing conditions, on the part of the Quay machine. That machine recently had a law enacted which is known as "the Ripper Act," and which authorized the Quay Governor to remove the mayors of the three cities of the second class—Pittsburgh, Allegheny, and Scranton—and substitute new executives, under the name of recorders, who could overturn the city departments. The Constitutionality of this act was challenged; but four of the seven judges sustained it, holding that "the fact that the action of the State is unwise, unjust, oppressive, or violative of the natural or political rights of the citizens, is not one that can be made the basis of action by the judiciary." They admit that the law infringes upon "what the citizens generally are accustomed to regard as their political rights," but they find that it does not clearly violate any express provision, and so must stand. Most flagrant abuses are thus declared to be possible under the fundamental law of the State by its highest judicial tribunal. The act in question, as the minority of the court points out, "takes from one set of men the offices given them by the people, and hands them over to the Governor that he may confer them on others." Nor is this all. As the three dissenting judges say: "Under the principles of this decision, there is nothing to hinder a hostile partisan majority in the Legislature from ousting the party in power in Philadelphia, a city of the first class, and placing the Government in the possession of the minority."

The Railroad Taxation Bill, just passed by the Michigan Legislature, is a mutilated relic of the Pingree régime, and is far from satisfactory to those who fought with that erratic politician for tax reform through two State campaigns and through two regular and two special sessions of the Legislature. As in all the previous legislative contests, the Senate has been the stone in the path, the House having tried to carry out the twice-expressed wish of the electors and the recommendations of Govs. Pingree and Bliss. Only once were the Senators forced to yield to Gov. Pingree, when, in extra session, just before the election of November, they agreed to submit to the voters a Constitutional amendment permitting the proposed change in corporate taxation. Their own seats were in danger then. But now, regardless of the large vote cast in favor of this amendment, and of the demand of the Republican platform for a change in the methods of taxation, the Senate has forced the House to agree to a measure for the advalorem taxation of railroad and express companies only, excluding from the bill such important corporations as telephone, telegraph, and sleeping-car companies. This partial measure is accompanied by a dubious provision adding two members to the three now on the Tax Commission, whose duty it will be to assess railroad property, and to determine the rate of taxation, which is to be the average of that on other property in the State. Appointments to the Commission are to be approved by the Senate, and the two men slated for the places "are agreeable to the railroad," according to the Detroit *Free Press*.

Mr. Schiff's testimony before the Industrial Commission on May 22 gave a clear and conservative presentation of the "community-of-interest" theory. A rate war, Mr. Schiff explained, involves serious loss in earnings to all the companies involved. Under such conditions, "the property suffers, and railroad men are unable to pay high wages to their working force. Now, if the stockholders of the one road hold stock in the other, not necessarily the controlling interest, they will not vote to take any action to reduce the values of their holdings. This is a community of interest." Mr. Schiff here undoubtedly outlines the real extent and the proper scope of the original community-of-interest plan. We say the original plan, because it is manifest to every one conversant with the situation that, in practice, the plan for controlling a rival corporation's policy has passed far beyond the plain and simple theory which Mr. Schiff enunciates. To buy up forty or fifty million dollars' worth of the stock of a rival railway, and assume its ownership in perpetuity by issuing bonds of the purchasing company in exchange for it, is something very different from what Mr. Schiff describes. From one point of view, indeed, the transaction does not differ from the smaller operations of twenty years ago, when the present railway systems were built up by purchasing useful connecting roads and issuing stock or bonds to pay the price. But purchase of "feeders" belonging strategically to a given system differs in all essential points from purchase of rival lines, and it is on this control of rivals that the controversy hangs to-day.

So long as purchases of this sort are made and held by individuals, objection to the policy must be confined to general grounds. But this plan, except in a few of the Gould and Vanderbilt connections, is no longer pursued. The price is too enormous, the consequent locking-up of capital too embarrassing, for even the largest capitalist to embark his private fortune in it. Hence the practice of buying the stock of a rival company and selling it to another railway, whose credit is thereupon pledged to raise the funds. Here, again, it might be argued that, if the shareholders of the buying company vote to make the purchase, the possible risk of the venture is their own affair. But this sort of public appeal to shareholders is exactly what does not happen. The Board of Directors controls the property, a firm of bankers or a single capitalist controls the directors, and the purchase is made—as in the cases of the Burlington and the Southern Pacific—at the single bidding of this outside interest.

Secretary Root has done his duty about the matter of insubordination at West Point in a way which commands the hearty approval of the public. Now the public must stand by him in the attempts which are sure to be made by powerful influences to undo his good work. No outsider has any conception of the tremendous "pull" which can be exercised by so large a group of cadets as have just been subjected to merited punishment. Every possible effort will be made to secure an amelioration of the penalties inflicted, and there will be danger that this policy will succeed unless it is made clear that the nation will not consent to condone the offences committed. The good name of the Military Academy is at stake in this matter. Discipline must be maintained, or the institution will fall into such disrepute that its whole future will be imperilled.

The final harmony and unanimity of the Presbyterian Assembly in agreeing to the preparation of a brief and untechnical creed for use in the churches, could scarcely have been looked for by one who had observed the warmth of the debates of last week. What secured general acquiescence was the amendment setting forth that the new declaratory creed was not to be a "substitute" for the Westminster Confession, or an "alternative" to it. That is, the Con-

fession will remain the official and judicial standard. Yet it is apparent that it cannot long remain so, in practice, after the new creed gets into use. It is the latter which, in effect, and with the hearty assent of the great body of Presbyterian laymen, will come to be taken as the authorized expression of Presbyterian faith; and the Confession, having visibly waxed old as doth a garment, will more and more tend to vanish away.

Whatever the merits of the controversy between the New York Yacht Club and Mr. Lawson, every one is glad that the *Independence* is to meet the *Constitution* for the honor of defending the *America's* Cup. The public wants to see the best boat win, and most sportsmen will agree with the public that the battle of technicalities that has run on for some months has been a good deal of a bore. The profession of sea-lawyer is little in honor among yachtsmen, and it is hard to see how either Mr. Lawson or the Club is to be held wholly clear from that reproach. More unlucky than the controversy has been the publicity given to the incomplete negotiations. Much of the discussion has been absolutely unfair and damaging to the Club, while Mr. Lawson comes out of the whole affair rather more compromised by the friends, than loved for the enemies, he has made. The publication of the complete correspondence was most unfortunate for the owner of the *Independence*, and little advantageous to the Club. Suppose that everybody had kept quiet, and that Mr. Lawson's letter of Saturday, offering to put his boat in the hands of a member of the New York Yacht Club, had been the only document of record, it is easy to see how the press would have rung with Mr. Lawson's praises, and it is hard to imagine that the Club, through taking such a course, would have suffered in popular estimation. The least said the soonest mended in these cases. If it has not been a very pretty quarrel, fortunately it has ended well. The Boston boat will be entered in the trial races, and we shall know that the Cup is defended by the better boat. That is the main thing, and, for the rest, sportsmen should be the readiest to let bygones be bygones.

Mr. Carnegie's donation of $10,000,000 to the Scotch universities in a lump sum seems at first to have taken away the breath of the British public by its magnitude. Now that they have had time to think it over, the expression of opinion is conflicting, not as to the generosity of the donor, but as to the ultimate effects of the donation. Nobody has hitherto shown a keener perception than Mr. Carnegie of the maxims of political economy on the subject of pauperizing the poor with gifts. In this case the question is raised whether he is not in one sense pauperizing the rich, seeing that he proposes to pay the tuition fees of all students in the universities of his native country, without reference to their own pecuniary resources. The grave question comes up, also, whether he is not doing harm to other institutions of learning which compete with the four universities in the work of educating the youth of Scotland, and which depend upon fees in whole or in part for their sustenance. Is it on the whole helpful to education to remove or weaken this element of competition? These and other questions are rife in the British press, and will probably be discussed at the approaching jubilee of Glasgow University and on other platforms. In a matter of such far-reaching importance, it may be assumed that no hasty conclusion will be accepted. The Scottish educators are among the first in the world. They will undoubtedly act in a way to promote both sound learning and self-help. That Mr. Carnegie will coöperate with them to the end of making his benefaction most useful to his fellow-countrymen may also be taken for granted.

While it is not likely that the Salisbury Government means to do anything serious for popular education, recent discussions in Parliament have brought out strikingly the backwardness, in this regard, of England, as compared with the rest of the civilized world. England releases the school-child earlier, and at best educates him fewer years, than any other nation of the first class. An English child may leave school at the age of twelve, and is no longer entitled to free education after the age of fifteen. In Germany, on an average for the different provinces, children must attend school till sixteen; in the United States, till fifteen. That is, the American or German child has an advantage over the English child of from two to three years of school. At the other end the disparity is even more striking. In Germany all children may claim the privilege of free education two years longer than in England; in the United States, five years longer. In France, as everybody knows, education is absolutely free, from the primary school to the university. In 1868 Matthew Arnold ventured the prophecy that within a quarter of a century there would be a Minister of Education in England, and free secondary education. He was too hopeful. The problem remains about what it was in his time. England has rested content with partial measures for primary education, while other nations, and Scotland even, have steadily advanced towards a well-ordered educational system. There is a triumph in store for the Ministry which will do as much for England; but that Ministry is not Lord Salisbury's.

Germany adopts tardily the policy of withdrawal from Pekin, and falls in tacitly with what history will probably call the American leadership. German diplomacy was committed to the other policy. The contingent was to hold Pekin with the other Powers until the court should return from the interior and negotiate with the conquerors face to face. This was to deal with the imperial yamen a little as if it were not only fugitive, but captured. There was talk of the pusillanimity of withdrawing, and the German attitude got some recognition as heroic. But as it became clearer that the Chinese court was better practised in the waiting game, the German attitude became uncomfortable and a little ridiculous. This they have had the grace to see. Meanwhile unnecessary delay has complicated the affair sadly. That this tardy action of Germany is the complete vindication of Secretary Hay's view of the case need hardly be pointed out. Where no trust is reposed there is no treason, says Dante. Secretary Hay early saw the disastrous results of withholding trust from the Chinese, which was not only good morals, but high diplomacy. The assumption of a peculiar kind of Oriental perfidy in the Chinese has proved to be the worst possible basis of negotiations. It is encouraging that Germany now chooses, even though reluctantly, the better part.

Admiral Cervera's fear lest the political agitation in Spain lead to a break-up of the country, reflects the stubborn way in which local rights and privileges are still asserted in various parts of Spanish territory. In spite of an apparently centralized and military government at Madrid, regionalism remains an enormous power in the political life of Spain. What control from the capital can do in the way of securing a Cortes of the desired color, the recent elections have shown again. As always, the Government wins. Its majority is what it chooses to make it. Sagasta gets a "vote of confidence" from the country, just as his rival, Silvela, would have done if he had remained at the head of the Ministry and kept his hand on the electoral machinery. Spaniards themselves laugh at the farce of these so-called elections. But, with all its appearance of arbitrary and unchecked power, the Government cannot ride over local prejudice too roughly. The Basque provinces would flame into rebellion if their old *fueros* were infringed upon; the Carlists are as stoutly insistent upon theirs as they were at the time of the Peace of Vergara; and the turbulent Republicans of Catalonia fiercely resent too open an appearance of dictation from Madrid. But Sagasta is too old a hand at the game to make it probable that he will force matters so as to bring on an open conflict, with possible disruption. Cervera appears to have been making an over-rhetorical and alarmist plea for a new navy.

THE DECISION, AND AFTER.

It is unfortunately true that the Supreme Court of the United States has not for some years enjoyed its old respect. In saying this we are but echoing the unconcealed opinion of lawyers who practise before it, and who are competent to pass upon its judicial reasoning. The thing speaks for itself. In nearly all the important cases from the income-tax decision down, the Court has been almost evenly divided, the prevailing opinion has not been written with the majestic march of logic which convinces the understanding while it settles the law, and the dissenting justices have expressed themselves with heat and almost with passion. This does not argue a happy personnel. The Court appears to be without a large and luminous mind like Marshall's, or the late Justice Miller's, to seize upon great principles and state them in such a way as to compel the assent of its associated and feebler intellects. The result is the divisions, we had almost said the wranglings, which have of late marked and marred the decisions of our highest court.

Monday's appearance of the Supreme Court, in passing upon many of the so-called insular cases before it, was certainly not of a sort to heighten either legal or general respect for it. This is confessed even by those who are pleased with the majority opinion. When two judges like Justice Brown and Justice White arrive at the same conclusion from openly and violently antagonistic premises, the lay mind may well think the course of reasoning tortuous. "I agree with you," said Justice White, "but your arguments are confused and wholly unconvincing, and your principles are in direct conflict with the true ones." This may be consistent with judicial dignity, but it does not make the bench dignified. Then there was the extraordinary realignment of the judges in the different cases—now dissent, now agreement, now this side, now that, but somehow a majority of one always preserved for the main contention of the Government. Old Thomas Fuller said that the only kind of logic he knew or cared about was that which, whatever the premises, brought out the praise and glory of God in the conclusion. So the majority of the Supreme Court have the inevitable air of having determined to uphold the Administration, no matter from what or how contradictory premises they started.

But while all this is regrettable, and while we should have maintained that it is, even if the judgment of the Court had been one that we did not regret, the law of the land has now been judicially determined. Five justices of the Supreme Court uphold the power of Congress to govern newly acquired territory as to Congress seemeth good. One of the five, Justice Brown, arrives at his judgment by a course of reasoning which Justice White pronounces, with the concurrence of Justices Shiras and McKenna, to be mistaken and pernicious. Yet these three concur in the findings which they say are absurdly based. Justice Gray concurs for still other reasons of his own. Thus the apparently hopeless fusion of opposing opinions was accomplished, and "the judgment of the Court" placed on record to the effect that the Porto Rican Tariff Act is Constitutionally valid.

That is for the present the law. But does it affect the question of the expediency or the morality of a colonial policy? Not in the slightest degree. Justice Brown himself admits that the great questions about our island possessions are to be "finally decided" (then not yet decided) by "the American people," and distinctly foreshadows the possibility that the decision may be to permit our new-caught sullen peoples to "form independent governments." And in one respect the decision of the Court may yet help on the cause of Philippine independence. By asserting the absolute power of Congress to "dispose" of territory, it stops the mouths of those who have been saying that the Philippines are ours, and that there is no way of alienating them. But the Court's opinion knows nothing of a power which is absolute to acquire but impotent to alienate, and plainly points the legal way to permitting, in territory now under control of Congress, the formation of "independent governments." That is a judicial platform good enough for the advocates of Philippine independence to stand upon.

As for the main and prevailing opinion of the Court, so strangely arrived at—a wedding of contradictories—we believe that Justice Brown was unconsciously predicting its future in what he said of the Dred Scott case. In that opinion, he remarked, "the country did not acquiesce," and he added, "Changes in judicial as well as public sentiment seriously impair the authority of that case." Similar changes may yet sweep away the authority of Monday's decision of the Supreme Court. But the immediate duty is, while accepting it as law, to make it tributary to liberty. Congress has full power to do what it will with the islanders, says the highest court. Very well, let us see to it that Congress does nothing inconsistent with humanity, with justice, with our broadest and proudest American traditions. Public sentiment is above Congress and courts. An aroused and jealous democracy may easily brush away, if it will, all these miserable limitations upon the rights of man.

The appeal now lies to the spirit of fair play and of freedom. If we are not compelled to extend the privileges and guarantees of the Constitution to our helpless wards, all the more reason for doing so voluntarily. The Supreme Court, it is true, in its apologetic and halting majority opinion, affirms that the fundamental provisions of the Constitution respecting life, liberty, and property do tacitly control Congress in legislating for dependencies. But, as the Chief Justice pointedly said in his dissenting opinion, if you grant unlimited power to tax, you grant unlimited power to dispose of property, liberty, yes, of life itself. If you take away the means of life, you take away life. No, it is idle to pretend that, under this decision of the Supreme Court, the island men have any rights which Congress is bound to respect. But what is the inference which lovers of liberty and of their kind should draw from that? Despair, or silent acquiescence in tyranny under the forms of law? Not for a moment. What they must seek to do, without hesitation or wavering, is to create an invincible body of public opinion which will ask, not what may we legally do, but what must we do as honest and consistent Americans, loyal to the principles of 1789.

RELATIONS WITH CANADA.

The Prime Minister of Canada, in reply to a question on Thursday, said that he had reason to believe that the Joint High Commission between Great Britain and the United States would resume its meetings at an early date. It may be assumed, therefore, that there is some prospect of a settlement of the questions which the Commission was unable to solve when the previous conference was held. The principal difficulty then was the Alaskan boundary dispute. If that question had been disposed of satisfactorily, everything else could have been easily managed. We might not have reached a treaty of reciprocity at that time, but we should have been in a fair way toward it.

The Alaskan boundary is still an obstacle of some magnitude. The opinion prevails in Canada that the United States contention that the true boundary runs parallel to the indentations of the coast, is contrary to all contemporaneous testimony and understanding; that the three Governments of Great Britain, Russia, and the United States understood that it followed the general contour, and not the small indentations of the seaboard; and that no different interpretation would ever have arisen if gold had not been discovered in the Klondike. However this may have been, the opposite opinion is now so generally held among us that any claim to the possession of the headwaters of the Lynn Canal by Canada, if put forward as a matter of right, would be rejected at once. On this point even those most friendly to Canada would agree. This is not, however, the last word on the subject. There may be means of sat-

isfying all the commercial wants of Canada without surrendering sovereignty over American territory. There may be a fair exchange of property, not inconsistent with the rights of the citizens of Skaguay or any other American town or settlement. The boundary dispute may, by mutual agreement, be referred to arbitration.

If the boundary dispute were amicably disposed of, the way would be open to better trade relations between the two countries. There can be no doubt that the Dominion Government was earnestly desirous of effecting a commercial agreement two years ago. The Liberals came into office pledged to do their utmost to obtain entrance to the markets of the United States for Canadian products. The majority of the people of Canada were in favor of this policy, but the manufacturing interests were not. In Montreal, one of the strongholds of the Liberals, the Board of Trade, when invited by the Government to give an expression of sentiment upon the arrangement through the Joint High Commission for negotiations for closer commercial relations with the United States, replied that it was opposed to reciprocal trade between Canada and the United States in manufactured articles and dairy products, until the preferential tariff with Great Britain had been in force a sufficient time to demonstrate the results of its provisions. It is evident that lumber, coal, fish, and general agricultural products barred the way to an agreement on the part of the United States Commissioners, and that manufactured articles barred the way for the Canadian Commissioners.

In Canada the results of the preferential tariff with Great Britain have been a surprise, inasmuch as the imports from the United States have very largely increased, while the imports from Great Britain have remained nearly stationary. Therefore, the opposition of the Montreal Board of Trade may be considered disposed of. It is noteworthy that the preferential tariff with Great Britain was a factor of no mean value in Canada's position during the negotiations through the Joint High Commission; as also that the Dominion Government is now sounding the other possessions of Great Britain upon the advisability of forming a commercial combination with Great Britain. The object of these moves is obvious. If they shall fail to induce the United States to agree to closer commercial relations, they will offer the alternative of enlarged trade with other countries.

Since the last session of the Commission, some changes have taken place on our own side, affecting the attitude of the United States and Canada toward each other. The extraordinary growth of our export trade has made protection look like small business. The evident intention of President McKinley to push the pending reciprocity treaties to a conclusion will bring reciprocity with Canada to the front. It would be a trifle incongruous to compass sea and land in order to procure reciprocity with France, and at the same time to disregard it with a country separated from us only by an imaginary line.

As the situation between the two countries now stands, there is an extraordinary flow of capital and enterprise from the United States into Canada, and the probabilities are that the flow will steadily continue. This is introducing into Canada a colonizing influence by the United States that must build up a continental policy north and south of the boundary. If the Joint High Commission reassembles and arrives at an agreement satisfactory to Congress and the Dominion Parliament, this policy will rapidly gather strength. But even if an agreement for closer commercial relations be not made at the present time, the weakening of the protectionist sentiment in the United States, due to the astonishing growth of our export trade, will eventually open the door to freer trade with Canada, so far as it depends upon our volition. When that time comes, the farmers, the lumbermen, the miners, and the fishermen of Canada will compel the opposing interests to yield.

THE TARIFF AND THE TRUSTS.

In the May number of the *Quarterly Journal of Economics* Mr. Charles Beardsley discusses the question of the tariff in its relation to Trusts, or combinations formed for suppressing competition. He considers that the McKinley tariff of 1890 was the first great incitement to the formation of Trusts, for the Standard Oil Trust, although earlier in point of time, was not dependent on any tariff, and stood alone in the field for many years. The concentration of industry in large establishments was already taking shape, but the law of competition was in force generally. Directly after the passage of the McKinley tariff, however, the articles of sugar, starch, linseed oil, lead, whiskey, tobacco, and envelopes were made the subjects of monopoly, or attempted monopoly, under the protecting duties given to the producers. From that time to the present, Trusts and combines have multiplied in the land, and a new branch of industry has grown up, that of the promoter of combinations. Mr. Beardsley is of the opinion that the movement is inevitable, and he is not disposed to condemn it. On the contrary, he thinks that "it should be welcomed as an important step forward in the evolution of industry," but that it does not need to be helped forward by acts of Congress and ought not to be.

Mr. Beardsley gives a list of the principal existing Trusts, with the rates of duty on competing articles imported from abroad, and the amount of such articles actually imported during the fiscal year 1900. Thus it appears that the American Steel and Wire Trust is protected by an average duty of 40.22 per cent., and that the importation of competing articles was $174,816 for the year. The Tin-Plate Trust has a duty of nearly 47 per cent., and the importation was $4,391,800. Of course the American tin plate was sold, or might have been sold, 47 per cent. higher here than it was offered in the world's markets, although the steel billets from which it is made in Wales are in part produced in the United States. Window glass is protected by a duty of 66 per cent. average, and the importation was $1,530,637. This is also made by a Trust. Table glass, a separate concern, has 60 per cent. The National Salt Company has a duty of 89 per cent. on salt in bulk, the Starch Company 73 per cent., the Carbon Company 115 per cent. for electric-lighting carbons, the Distilling Company 123 per cent. protection against Scotch whiskey.

The conclusions reached by Mr. Beardsley are that this condition of things cannot last, and that it ought not to last. He holds that the tariff on goods of any sort of which the cost of production, including a fair profit, is no higher in the United States than in foreign countries, should be little or nothing. All duties above this are an incitement to monopoly and are sure to run into monopoly. Most iron and steel products, he contends, can now be produced in the United States as cheaply as anywhere else in the world, "if not more cheaply than anywhere else," yet they are protected by an average duty of 37 per cent. ad valorem. The paper industry is another in which we can compete with any nation on equal terms. In fact, our exports of paper exceed our imports, yet the duty on imported paper and manufactures of paper is equal to 29 per cent. ad valorem. It should be borne in mind, too, that imported articles must pay ocean and inland freights and other charges, which are in the nature of additional protection to the home producer.

Mr. Beardsley would not lower the tariff in a spirit of hostility to combinations, or for the purpose of crushing them out, but merely to correct monopoly abuses. He thinks, however, that the rapid progress of consolidation among the tariff-protected Trusts has made revision of the tariff necessary, and that it cannot be long delayed. The consolidation of an industry, he says, is no reason, of itself, for withdrawing protection, but the existing rates are in some cases so excessive, and the prices charged to the home consumer so oppressive, that the present condition may be described as dangerous. The facts collected in Mr.

Beardsley's paper make it an important contribution to the literature of the subject.

The discussion of Congressman Babcock's proposition to repeal the duties on iron and steel continues in the Western newspapers in a fitful way, showing that it is not to be put down by a sneer, or to be stamped out as a heresy in the Republican party. In fact, all signs point to a new political issue growing out of this question, not necessarily between the Republicans and the Democrats, but rather dividing both parties. The issue will come first between the moderates and the extremists in the Republican ranks, counting among the former such men as Mr. Kasson, Congressman Babcock, Senator Cullom, Senator Allison, and President McKinley himself, and, on the other hand, the Boston Home Market Club, the tariff-protected Trusts, Senators Lodge and Frye, the ship-subsidy crowd, and all who apprehend that any change of the tariff, even in the form of a reciprocity treaty, will open the whole question and bring in wholesale reductions.

The original theory of tariff protection as formulated by Hamilton, that it was intended merely to give manufacturing industries a chance to start, to be restricted to such as were not already established, and to be abandoned as soon as they were well going, has been lost sight of. Even Senator Hoar appealed the other day to "the doctrine of the great economic school which Hamilton founded," oblivious of the fact that Hamilton considered the iron and steel industry already established here in 1790, although he was willing to recommend temporary duties on those articles as high as 7½ and 10 per cent. Such anachronisms and such misconceptions cannot hold the ground much longer in the Republican party, or in any group of thinking men.

THE HAWAIIAN UNHAPPY FAMILY.

Meagre press dispatches have given only bare hints of the quarrels by which people in the Hawaiian Islands are now rent asunder. The political smoke and lava-flow are as if Mauna Loa were in eruption. Our cheerful Imperialists, however, pay no attention to these things. To annex an island they will throw themselves into a noble rage and defy the world; but to govern it well—faugh! such plodding work is not for them. They are after another island by that time. Who does not remember the intimate knowledge of Hawaii displayed some years ago by every annexationist in this country? Why, the very children in the streets knew all about the wicked "monarchists" in Honolulu, and the heroic "patriots" who risked all in order to give away their country. But that was before we got the islands. Now that they are ours, we care nothing for them. There is something in the Bible about compassing sea and land to make one proselyte, and his turning out, when made, twofold more the child of—well, the Imperialists are mighty in the Scriptures, and it is not necessary to complete the citation.

The bitterest controversy in the Territory of Hawaii is that which is raging between the Legislature and Governor. Under the terms of the organic act, the regular session of the Legislature expired by limitation on May 1. But it had not passed the necessary appropriation bills, and there were many other matters of legislation which had failed. Accordingly, a joint resolution was passed requesting Gov. Dole to extend the session. A petition to the same effect was laid before him by a committee of "Home Rulers," but the Governor "turned to them with a smile," and said that he should refuse to do anything of the kind. He added:

> "The time of the session has been wasted by the law-makers, and the public funds have been dissipated without accomplishing any good results.
>
> "I have it on good authority that the members of the Legislature have disregarded their oaths to such a degree as to have been guilty of taking bribes in consideration of their individual efforts in the interests of certain measures which came before them. I have this information on such excellent authority that it would be a dereliction in duty for me to hesitate in this matter, and I therefore deny the petition and refuse to extend the session as requested."

The leader of the "Home Rulers" "drew a deep breath" when he heard this, and "gasped with surprise." Then he told the Governor that it was a most serious charge which he had made against the Legislature, and one "that every man of honor among us wants to see proved." He probably meant disproved, unless he was an Irishman, like that other Celt who went to a lawyer to complain that so and so had called him a liar: "And I propose to make him prove it." Gov. Dole, however, declined to prove his charges, though, as he has served long on the bench and knows what legal evidence is, and is not a man given to impetuous utterance, it is probable he has something pretty definite to go upon.

But the Legislature took a glorious revenge. It adopted an address to President McKinley praying him to "remove from his high office" the Governor of the Territory. This official's high crimes and misdemeanors seemed a little vague in the specifications, it must be confessed. It is asserted that he has "lost the confidence of the majority of the people"; that he "has not their best interests at heart," and that he is "trying to take from its rightful owners, to give to a few, the heritage of the people." Those are even more serious charges than the ones made by Gov. Dole against the Legislature, but it is clear that, as they stand, it is impossible to prove them, however much men of honor may want to see them proved. But what the Legislature really desires is to have the President order Gov. Dole to extend the session. "We know," they remark innocently, "that it is a matter out of your real sphere, yet a suggestion from you will be sufficient to accomplish the end." But as Mr. McKinley will scarcely make even a suggestion out of his real sphere, it is safe to say that the Legislature will be called, as Gov. Dole proposes, only in special session to pass appropriation bills, and to do nothing else.

The whole thing is plainly a disgusting political squabble. A set of immigrant promoters and schemers have seen their plans go wrong, and are filled with fury against Gov. Dole. Americans that they are, they speak of "his infamous republic" which he got the United States to annex, and actually go so far as to advocate a "revolution" against him. It is the Honolulu *Republican*, the organ of the smart and pushing crowd that has gone to the islands since annexation, which calls for this new Hawaiian revolution against a "pliant and weak Executive who would suck the life-blood out of this fair land." But Gov. Dole has received the endorsement of the Republican Central Committee of Hawaii, and appears to have the support of the great majority of conservative citizens, so that he will probably continue to suck blood as before.

Even Federal officials in Hawaii do not find themselves living in a happy family. The United States District Attorney recently made a savage arraignment of a jury which had refused to convict a man on the clearest evidence, and Judge Estee remarked from the bench that he "heartily endorsed" what District Attorney Baird had said of the repeated miscarriages of justice, and incontinently discharged the jury for the term. The thing was done, said the District Attorney, to "save the United States Government" the disgrace of such travesties of justice as had been witnessed in that court. Like truthful James, we but state the facts as we find them in the Hawaiian newspapers. We have no interpretation of them to insist upon, but we think the Imperialists and Annexationists ought to have one. At any rate, they ought not to be so silent about the Hawaii that they have got, and scream so loudly about some other islands that they want to get.

ART FOR THE CITY.

The Municipal Art Society differs from similar New York organizations in taking the city just as it finds it. While many organizations tacitly assume that the city should do things which it now leaves undone, or that it should undo what it has done already, the Municipal Art Society assumes that the broad lines of public expenditure

are fixed on general grounds of utility, and that no Ruskinian protest against the hideousness of the modern city will avail. The city is here with a thousand growing needs. Merchants' signs and advertisements there must be as long as goods are sold; lamp-posts as long as there are lamps; post and fire-alarm boxes till the Post-office and accidental fire are outgrown. To all time the city must fill our streets with such objects of utility. That these may and should be objects of beauty as well, is the contention of the Municipal Art Society.

At a recent meeting of the Society its President, Mr. John De Witt Warner, described the plan of operation. The Society, he said, does not presume to tell the city how it shall spend its money, but only how it may get, with efficiency, the greatest amount of sightliness for the money it must spend. The Society believes that our streets are filled with ugly objects, planned with respect neither to themselves nor to each other, not because we prefer ugly to beautiful objects, but because we give the matter no thought. City officials, merchants, and builders lack the time, even when they have the taste and skill, to consider anything beyond immediate utility. Now to make an object planned for use beautiful requires less money than taste and taking of thought. The commonest objects may be made pleasing to the eye, and gain thereby utility. In Pompeii and Herculaneum, for example, the very kitchen utensils were so planned that, while as useful as ours, they had a distinct artistic quality. It is this element of taste and reflection, which the city lacks, that the Municipal Art Society offers to supply. It includes artists and decorators and men of affairs who are used to considering the form as well as the function of things. It represents a certain taste and knowledge which it puts at the city's disposal. The aim is simply service.

This attitude can hardly be misinterpreted. It is not only a generous, but a friendly one to all who, in public or in private capacity, are building up the visible city of New York; for it rests on this faith, that when at equal expenditure a sightly and an unsightly object are offered, men will generally choose the sightly. The city officials have put up a great many ugly objects in the streets, not because they prefer ugly objects to beautiful, but because they have not known that there was a choice. The Municipal Art Society will see to it that the better thing is held in view, confident that in the long run the better thing will be chosen.

A concrete example is at present before the people. The City Council must soon provide for the marking of the streets. Its part of the work will be done when it decides where the signs are to be affixed, how they shall be displayed, and how much they are to cost. At this point the work of the Municipal Art Society begins. It will try to determine the best form and lettering for these signs, confident that they may be made such as to serve their purpose well and yet give character to the street-corners. Similarly, when the occasion arises for new lamp-posts, gas or electric, or for patrol boxes, the Society will give each problem its attention. It wishes the city to get the best kind of lamp-post or patrol box that can be had for the money, and believes itself able to help the city to get the best.

The question of street advertising is already the subject of restrictive legislation in many American cities. It is probable that examples of good advertising will do more to bring about reform than hostile ordinances. No merchant strings costly and hideous signs across his building because he likes to spend money for ugly signs, but because he thinks that it is good business. Show him that the business sign may be a beautiful architectural feature, show him that it is bad business to make a good or a tolerable building look flimsy by shingling it with detached signs, show him that the smaller and neater sign is absolutely less expensive and more effective, and you have made an unconscious convert to the cause of municipal art. Gain a few such merchants, and you have redeemed, artistically, a quarter of a city. Dreams! Counsels of perfection! some one will say. Skeptical reader, they have actually done it in Brussels. A voluntary society took up the question of merchants' signs, the merchants entered enthusiastically into the movement, and to-day the city is a model in this respect. The Belgians are no cleverer, certainly no more artistic, than ourselves; they have been, in this matter, simply more sensible than we have learned to be.

The Municipal Art Society will hold exhibitions illustrating the best forms of the every-day street objects, in the hope that these suggestions will be taken up by the business men of the city. At present largely composed of artists, the Society seeks lay members. It wants the men who build, and advertise, and pass city ordinances, and direct city contracts; for it is these men who really have in their hands the power to make this city beautiful. Fine pictures may abound in public and private collections; noble buildings and stately monuments may be multiplied in the city, and yet these isolated objects hardly touch the city as a whole. These things may remain only art *in* the city—the luxury of the few. What we need is art *for* the city in its ordinary, necessary day's work. Towards this end many individuals and many organizations are striving—none more directly and hopefully than the society whose purposes we have briefly described.

PRESBYTERIAN CREED REVISION.

Once before, in recent years, the Presbyterian Church was agitated by a debate over the revision of its standards of doctrine. Apparently some modification of its symbols was then desired by a majority of the churches; but the anti-revisionists, under the skilful leadership of President Patton of Princeton, managed to burke the movement. They were greatly helped by the complication of the Briggs heresy trial. It enabled them to throw an ingenious, because only suggested, theological odium upon the advocates of a revised creed. "You see," the deft implication was, "what revision will come to—German studies, an unholy use of Oriental languages, belief in the Deutero-Isaiah, assertions that Daniel is a writing of the second century B. C., and other enormities of the kind." That would never do, and both revision and Professor Briggs were given their quietus at about the same time.

But in the public discussions of those years, as in the debates which have attracted so much attention at Philadelphia during the past week—culminating in an acceptance of the proposal to adopt a shorter declaratory creed—an impartial auditor could not fail to detect a strange note of unreality. It is as if ghosts were arguing with shadows. What we mean is, that neither side speaks its real and full mind, but each is so hampered by the traditional and conventional, so tied up with awkwardnesses and *arrières pensées*, that the eye seems as far as possible from being on the actual fact. Carlyle used to rail at all public speaking. It was simply impossible, he maintained, for an orator to tell the truth, so fettered must he always be by his audience and time and place. Certainly the theological debater in public will find it hard to escape such limitations. As a matter of fact, any one at all acquainted with either the conservatives or the liberals in the Presbyterian Church knows that a dress-parade debate on the Westminster Confession is the last place to learn their real views about it. Privately, the stiffest opponent of revision would admit that many of the clauses of the creed were utterly repugnant to him; and in confidence the liberals would go much further than they do in full view of the world. As we say, the necessary result is to make the arguments, the speakers, the creed itself, seem like phantoms in a mist.

We boast of our realism in art and letters and criticism of life, but it is strange how little reality we arrive at in our attempts to estimate men's actual theological beliefs. A heresy trial, a set debate on doctrinal statements,

are not the true test. Do you want to know whether a clergyman really believes in infant damnation? Do not ask at what seminary he studied, to what creed he has subscribed, or to what denomination he belongs; find out what he says in comfort of the mother from whom a young life has been torn away, just as it was blooming into consciousness. There you will find his working creed, which is, of course, his real creed. And if you want to discover what the most unbending divine at Philadelphia really thinks of the awful possibilities beyond the grave, do not take his word for it in some state discourse on Calvinism, some stout defence of the faith once delivered to the saints, but listen to him as he stands by the coffin of a man who has died "outside the pale" of Christianity. It is then that the infinite yearning of human hearts that mourn plays havoc with formal theology, and lets the real theology appear.

Perhaps the most glaring of the unrealities which strike one in this dispute about the Westminster Confession is the assumption that it is a system of doctrine dear to the hearts of the Presbyterian laity. Nothing could be further from the truth. Presbyterian laymen do not have to subscribe to the Confession; nine-tenths of them do not know, except in the vaguest way, what is in it; it is not preached in the churches; if a minister should undertake to preach some parts of it, in literal acceptance of its statements, he would be held in execration by his own hearers. These facts are easily capable of verification. A mere attendant of a Presbyterian church would not know from the preaching, year in and year out, what evangelical denomination was the clergyman's. Whatever Presbyterian ministers may keep in the back of their heads, they preach a tolerant and Christian doctrine. It is only by their humanity, their goodness, their sympathy, their helpfulness, and their self-sacrifice that they endear themselves to their people, who in their secret hearts care little for any creed except that of a noble life.

Not to be guilty ourselves of unreality, we hasten to add that we see in the excitement over creed revision much more than a mere dispute about words. We understand the anxieties which it arouses in the minds of some of the best people in the world. What they are thinking of is their Church, not as a refuge for invalids, but as an association for doing good, a mighty social engine, the mother and sustainer of the sweetest charities, the organization which, when all is said, best embodies in this poor world of ours all that range of humane activities which the late Charles L. Brace summed up under the comprehensive name *Gesta Christi*. And what is feared is that somehow the stability, and so the usefulness, of this company of Christian believers will be impaired by changing the historic formula of its faith. We think the fear is groundless, but we can see that it is sincere, and we respect the motives, wholly unselfish, from which it springs. But these excellent people should strengthen themselves in the assurance that, whatever may happen to the phraseology of their creed, which has the inevitable marks of its age upon it, the pulsating Christian benevolence and enthusiasm which are the real life of their Church cannot be taken away. They may bring themselves to confess with Carlyle that possibly the Westminster divines "did not get to the bottom of the Bottomless after all," and that "the Great God means something other and farther than they imagined"; but that still the things which are lovely and of good report will continue to be the fragrance of the Christian Church.

THE ARCHIVO GENERAL DE MEXICO.

UNIVERSITY OF TEXAS, May 20, 1901.

However much students of Spanish-American history may differ with Hubert Howe Bancroft, they can hardly withhold grateful acknowledgment of his path-breaking work in the bibliography of the subject. Nevertheless, even in this field his statements are sometimes seriously misleading. In the preface to his 'History of Mexico,' vol. i., p. viii., he speaks of his material as including "a copy of the famous 'Archivo General de Mexico' in thirty-two volumes." In the list of authorities placed at the beginning of his 'North Mexican States and Texas,' he mentions the same collection, describing it further as in manuscript; and in the body of the work, *e. g.*, vol. i., pp. 631-2, note 34, he makes references to it that are consistent with this description. In his 'Arizona and New Mexico,' p. 21, he refers to the series as "the 32 volumes of MSS. which make up the 'Archivo General of Mexico,' or which, rather, form an introduction or beginning for the hundreds of volumes of records preserved there—collected from all parts of the country by order of Cárlos IV., dated February 21, 1790." In these and other references he gives various bits of information relative to the contents of the series, always naming it by the same title, to wit, "Archivo General de [or of] Mexico." Justin Winsor, evidently following Bancroft, uses, in his 'Narrative and Critical History of America,' ii., 399, the same designation. But to call the series of thirty-two volumes which Bancroft describes clearly enough for identification the "Archivo General," is a serious mistake. In the expression quoted above from his 'Arizona and New Mexico' he reveals some knowledge of the real relation of the series to the "Archivo General," but he only makes the confusion greater for the student by leaving the proper application of the title hopelessly uncertain.

If the visitor to the City of Mexico will pass from the Plaza Mayor in at the most southerly entrance to the Palacio Nacional and turn to the right when he reaches the courtyard on the inside, he will see in front of him a door above which is the legend in large script letters, "Archivo General y Público de la Nación." If he comes duly accredited and will place himself under the guidance of the courtly Archivero, he will be led from room to room between shelf-covered walls lined with documentary materials, bound and unbound, and he will not need to be told that no man ever had a copy of the "Archivo General." There is, in fact, enough matter contained therein to make about seventy thousand volumes. Such is the estimate of the Archivero, Señor Justino Rubio. To him the writer is indebted also for a brief outline of the history of the collection and description of its contents, which may be summarized as follows:

The idea of forming an *archivo general* which should contain "los papeles y monumentos" of New Spain originated with the Viceroy Revillagigedo. After some correspondence on the subject with the authorities at Madrid during the years 1790-92, in which his scheme was commended and he was asked to perfect it and send estimates of its cost, he was forced by the negligence of the home Government to proceed with it as best he could on his own responsibility. He had submitted also a plan for the regulation of the secretaryship of the viceroyalty, concerning which he had been able to get no expression; and, in the temporary arrangement he was thus put under the necessity of making, he included a set of provisions relative to the archives, which was the first step towards an organized system for their classification and use. Among the branches or sections then formed were those of Royal Cédulas, Correspondence of the Viceroys, etc.

The nucleus of the History Section is a compilation made in the year 1792, which is likewise due to Revillagigedo, though the initiative in this instance came from Spain. In 1780 the Spanish Government projected a general history of its possessions in the Indies to be written at Madrid; and with this in view, it asked Viceroy Don Martín de Mayorga for the Veytia manuscripts and the papers of the Cavalier Boturini, and all documents of the same kind that might be found in the library or archives of the University or any other corporation or community, or individual, in Mexico. In 1783 the manuscripts of Veytia, the gift of his widow, Doña Josefa de Arostegui, were sent to Spain, and the receipt of them was acknowledged in 1784. With the acknowledgment came an order to send also the documents mentioned as existing in Mexico by Clavigero in his 'Storia del Antico Messico,' published in 1780. In 1788 Viceroy Manuel Antonio Flores sent to Spain, in obedience to the previous order, a box of papers, which, according to the statement of Minister Porlier, was received there, and contained 367 folios in eleven books, the last incomplete, relative to the history of Texas; some fragments of the abridged history of the Provincias Internas by Tello; various separate papers of the Boturini collection, etc. Finally, in obedience to a royal order, dated February 21, 1790, there was compiled a series of copies of documents relative to New Spain, amounting to thirty-two volumes. This compilation was sent to Spain in 1792, along with a letter, the receipt of which at Aranjuez was acknowledged in 1798. Besides the copy of the series sent to Spain, one was kept in Mexico, and some Mexican bibliophiles say

that another copy was given to the Franciscans. So much on the authority of Señor Rubio.

The series left in Mexico is still there, and it is evidently a copy of this that Mr. Bancroft calls the "Archivo General." How he came to give it this clearly inapplicable title is difficult to explain. On the title-page of volume i. of the copy which is now included in the "Archivo General" of Mexico, the series is called, "Colección de Memorias de Nueva España." On the next page, with which begins a detailed introduction to the whole series, it is spoken of as "Memorias para la Historia de la América septentrional." These are, I think, the only variations of the title. But whether Mr. Bancroft can justify himself in the premises or not, the student should not be led to confuse this fragment of the Archivo General with the whole collection, containing material enough to make seventy thousand volumes.

If, however, the "Colección de Memorias de Nueva España" is but a very small part of the Archivo General, it is unquestionably a most valuable part. More or less of the material from which the copies were taken still exists in the original; but how much of it, and where it is to be found, are questions not to be answered offhand. It is to be feared that many of the documents of the collection can now be had in no more authentic form than that which the copyist has given them in its pages. This, in fact, is what constitutes their value to the historian. But the copying does not seem to have been careful. The introduction claims that it was done with substantial faithfulness, but the comparisons which I have been able to make do not bear out the statement. On the contrary, it appears to be far from exact. During the past summer Miss Lilia M. Casis, Professor of Spanish in the University of Texas, and I copied carefully a number of the documents in the "Memorias," among them being the 'Breve Compendio' of Antonio Bonilla. By a fortunate chance I have been able to compare with the copy made by Miss Casis another which belongs to the Agricultural and Mechanical College of Texas, and which was made, not from the example in the "Memorias," but from its original, or possibly a better. The copy in possession of the College was bought from Bernard Quaritch in 1881, and previously belonged to the Ramirez collection. The comparison shows differences so numerous and considerable that it seems useless to give examples. The abbreviations and the pointing of the two are very unlike. There are variations by the dozen on every page. In the copy made by Miss Casis, as compared with that belonging to the college, words are often changed and omitted, and sometimes whole series of them disappear. These larger omissions are probably lines of the original manuscript. The changes frequently impair the intelligibility of the document. In rare instances Miss Casis's copy shows a slight improvement over that of the College by correcting manifest slips of the pen, but this is very seldom. Hers, it should be said, was verified with great care; and the defects that appear in it are really those of the copy in the "Memorias" from which it was made.

The introduction to the "Colección" divides the documents composing it into two classes. The first class, filling the first eleven volumes, consists of those asked for by name in the royal order of February 21, 1790, together with the "Chronicles of Michoacan," which are contained in the last five volumes of the eleven. The second class, filling the other twenty-one volumes, consists of documents selected in obedience to a general provision in the same order, for the copying and transmission of the manuscripts and documents that should be found serviceable to illustrate the antiquities, geography, and history, civil, ecclesiastical, and natural, of America.

The list asked for in the royal order included sixteen titles, as follows: (1) Los Documentos del Musëo de Boturini; (2) Las Relaciones de Ixtlilxochitl; (3) El Informe del Ilustrísimo Sôr D. Juan de Palafox al Conde de Salvatierra; (4) El Memorial de Don Carlos Cigüenza y Gongora; (5) El Impreso de Cigüenza que es el Teatro de Virtudes Politicas; (6) El Librito de la Vida y Muerte de los Niños Tlaxcaltecas; (7) El MS. Mexicano sobre la Historia de Tlaxcala; (8) La Conquista del Reyno de la Nueva Galicia; (9) Las Relaciones del Nuevo Mexico del Padre Fray Geronimo de Zarate Salmeron; (10) La Carta del Padre Fr. Silvestre Velez Escalante y el Quaderno de la Restauracion del Nuevo Mexico; (11) El Ynforme del Padre Fr. Alonzo de Posadas sobre las Tierras del Nuevo Mexico; (12) El Kalendario Yndiano; (13) Los Cantares de Nezahualcoyotzin; (14) El fin de la Historia de Texas; (15) El Viage de Yndios y Diario del Nuevo Mexico; (16) El fin de la Historia de los Pobladores de esta America septentrional, escrita por Don Mariano Veytia. The first six volumes of the "Colección" include all these documents except Nos. 7, 14, and 16.

As to the second class of documents, which fill the remaining twenty-one volumes of the "Colección," they are distributed as follows: Vol. 12, Cronica Mexicana; (13) Historia Chichimeca; (14) Memorias de Mexico; (15) Memorias para la Historia de Sinaloa; (16 and 17) Materiales para la Historia de Sonora; (18) Cartas para ilustrar la Historia de Sinaloa y Sonora; (19 and 20) Documentos para la Historia Eclesiástica, y Civil de la Nueva Vizcaya; (21) Establecimiento, y Progresos de las Misiones de la antigua California; (22 and 23) Noticias de la Nueva California; (24) Diario de Derroteros Apostolicos y Militares; (25 and 26) Documentos para la Historia Eclesiástica y Civil del Nuevo Mexico; (27 and 28) Documentos para la Historia Eclesiástica y Civil de la Provincia de Texas; (29) Monumentos Historicos de Coahuila, y Seno Mexicano; (30) Tampico, Rio Verde, Nuevo Reyno de Leon; (31) Noticias de Varias Ciudades; (32) Memorias piadosas de la Nacion Yndiana. Except for the necessary disregard of one or two merely formal variations in shaping each title marked by a double number from its pair of practically identical constituents, this list is copied with literal exactness, and it will serve to give an idea of the character of the series. The enumeration may be wearisome to the casual reader; but the student who appreciates the importance of Spanish-American history will follow it with more care and patience. Volumes 27 and 28 are of special interest as including the sources of the early history of Texas. Volume 27 contains forty-one copies of documents, mainly letters, reports, and *dictámenes fiscales*, covering—except as stated below—the period 1689-1722. No. 1, however, is a résumé of the history of Texas up to the date of the manuscript, which is 1772. It bears the title 'Breve compendio de los sucesös de texas por el Señor Bonilla, . . . 1772.' Nos. 40 and 41 are dated respectively 1767 and 1754, and belong, in chronological order, rather to Volume 28 than to 27. Volume 28 contains thirty-seven copies of documents of the same general description as those in 27, but ranging in date from 1722 to 1779.

Bancroft says ('North Mexican States and Texas,' i., 631) that these documents were "consulted and closely followed" by Padre Juan Agustin Morfi in writing his 'Memorias para la Historia de Texas,' "the standard authority for Texan history down to this date [1783, when Morfi died], though never published." The only copy of this work in America of which I have any definite information is that to which Bancroft refers as belonging to his collection, and which he says ('North Mexican States and Texas,' i., 631, note) was made "from the original in the archives of the convent in Mexico" in 1792. Shea refers to the 'Memorias,' but I have not been able to locate the copy he used. It seems, however, that the incomplete work relative to Texas, containing three hundred and sixty-seven folios in eleven books, which was sent to Spain in 1788, was the 'Memorias' of Morfi; for No. 14 of the pieces asked for by name in the royal order of 1790 was 'El fin de la Historia de Texas,' which was described as "del R. P. Fr. Juan Agustin de Morfi."

Some of the documents included in Volumes 2 and 3 of the 'Memorias para la Historia de la América Septentrional' have been printed (see Bancroft's 'Arizona and New Mexico,' 21) in a collection entitled, "Documentos para la Historia de Mexico," published in Mexico, 1853-'57, in four series, aggregating twenty volumes. This seems to be the same collection that is described by Winsor ('Narrative and Critical History of America,' ii., 398), as published "from 1852 to 1857" and "reckoned variously in nineteen or twenty-one volumes." The 'Relación' of Zárate-Salmerón was translated in the *Land of Sunshine*, November, 1899-February, 1900, and the 'Carta' of Escalante in the same magazine, March-April, 1900.

Thus it appears that the series of thirty-two volumes miscalled by Bancroft the "Archivo General de Mexico" is only the original nucleus of the History Division of the Archivo General. Much important matter has been added to this division since 1792, and the number of volumes contained therein now runs to between three and four hundred. Some of the later additions would doubtless prove more attractive to most students of American history than the original thirty-two, but the description can be carried no further here. As to the whole collection, or the Archivo General proper, the writer's purpose from the beginning has been not to make a complete enumeration of its branches, but rather to give some idea of its actual nature and extent.

GEORGE P. GARRISON.

THE AMHERST ECLIPSE EXPEDITION—I.

OFF SOKOTRA, April 3, 1901.

In 1869 the Suez Canal was opened to the world, a supposable photograph of the attendant ceremonies being still on sale at Port Saïd, wherein the figure of M. de Lesseps stands conspicuous in the foreground.

Since that auspicious day the maritime history of the world has been revolutionized, 95 per cent. of all steamers trading between Europe and the East now using this great waterway. A rough estimate gives no less than half a million as the average number of persons passing through yearly. The twelve months ending in April of last year recorded 3,605 steamers as traversing the Canal, aggregating more than eight million tons. Comparatively few are American; of three hundred in January last, but two sailed under the Stars and Stripes. These were the *Buffalo*, from Gibraltar to Manila, and the *Alexander*, from Manila to Norfolk, both carrying war material. The largest steamer of her class to go through was the North German Lloyd *Grosser Kurfürst*, in November. Of 13,000 tons burden, her English cabin passengers alone numbered three hundred. In addition to those steamers actually traversing the Canal, over five hundred last year landed cargo or passengers at Port Saïd, while two or three times a week boats leave there for the Levant, Jaffa, and Beirut.

This half-way house between East and West, with its forty thousand or more inhabitants, can hardly be longer considered the international dumping-ground of refuse villany; nor can it continue to claim the proud distinction of being the wickedest town of two hemispheres. From the Mediterranean approach, after sighting the spidery lighthouse at Damietta, little is apparent except another tall column and the felucca-rigged dhows of the Arabs. The shores are so extremely low that buildings in the town first come into view, then the statue of M. de Lesseps, and the fine breakwaters, inside which a fleet of steamers of all nations may be seen, generally engaged in the very disenchanting operation of coaling. Port Saïd is of necessity visited by all voyagers—everybody goes ashore, if for no other reason than to escape the blackening ordeal of his ship. It cannot be said that the town offers anything very attractive in itself; a fine beach, a boulevard along the water, a main street which suggests a toy bazaar, and a seven-story building of brick and iron being all that the casual traveller notices. This "Eastern Exchange Hotel and Clubhouse," however, is the first really fine edifice erected here, except the handsome and far more picturesque headquarters of the Canal Company, surrounded by lawns and flower-beds. The hotel is the only one under English management, and here one may find late newspapers and view an endless number of manufacturers' samples and framed cards. The building cost nearly half a million dollars, and was the first hotel in Egypt lighted with electricity. The streets, wide, dusty, unpaved, are filled with a motley company. Egyptians, men and women draped in sombre black, brown Arabs, ebony Sudanese, mingle with Europeans of every color and clime, while English, French, and Arabic are heard equally.

Rates of toll for the Canal may be altered, but only after three months' notice in the capitals and principal ports of all nations most concerned. These are never to exceed ten francs a ton of capacity, or for each passenger, and have already been twice reduced. Despite that fact, the steamer carrying the Amherst Eclipse Expedition to Singapore paid 800 pounds in dues, even with this expenditure saving more than two-thirds the cost of going around the Cape, to say nothing of time. The rules governing passing craft appear to be strict. Written information as to his ship must be handed in by each captain—her name, nationality, and draft, the port of sailing and destination, as well as his own name and that of owners and charterers and the number of passengers and crew. Naturally, nothing must be thrown overboard, especially ashes and cinders; but also nothing is to be picked up, notice of any article lost overboard being left at the nearest station. No guns shall be fired, and no steam whistles blown except in cases of extreme danger. We are rather grewsomely reminded that burial in the Canal banks is strictly forbidden. All sailing vessels above fifty tons must be towed; above one hundred tons must also take a pilot, and no sailing craft may navigate at night. While pilots are compulsory, the entire responsibility still rests with the captain. If local pilots know the Canal better than a stranger, it is argued that the captains appreciate more thoroughly the peculiarities and steering capabilities of their own ships. Pilotage dues are only $5; but, at night, rates are doubled. If a collision appears unavoidable, all ships are instructed to run aground to avoid it, the sandy and yielding nature of shallows near the banks offering the less of two evils. But no other ship is permitted to help off a grounded one. Each vessel, on arrival at either end of the Canal, must be entered at the Transit Office, and is then supplied with an extra rudder, for more instantaneous control, and at night each must also carry, on its bow, an arc light of sufficient power to show the channel for 1,200 metres ahead, and, when "split," to be capable of illuminating around the vessel an area not less than 200 metres in diameter.

All preliminaries being duly adjusted, we started through as a brilliant Egyptian sunset was burning in the west, and a crescent moon looked down through skies of wonderful clearness upon the varied scene. Any town with lights and water may be beautiful at night, and, as we slowly moved away from the anchorage, even Port Saïd rose to dignity and loveliness, its lamps reflecting long, wavering lines in the still harbor. Eighty-seven miles lay before us, at a speed not to exceed five and a half knots. Sixty-six are actual Canal, while twenty-one miles of the navigation run through Lake Timsah and the Great and Little Bitter Lakes. The fact of the route passing naturally through these small bodies of water did not, to any great degree, lessen the labor of dredging. Only in Great Bitter Lake was there sufficient depth for ocean steamers without artificial excavation, and that for a distance of but eight miles. Here steamers are allowed to use their normal speed and may pass without stopping.

On its surface the Canal is generally 320 feet wide; in three places, where the banks are high, aggregating eighteen miles all together, it is reduced to 195 feet. Its floor measures 72 feet, and the company engage to keep this width dredged to a depth of 26 feet. While the soil is chiefly of sand, there is a little rock, soft lime or sandstone near el-Gisr, sandstone also being encountered beyond Tusun. At Serapeum a few yards of hard gypsum was found.

A fine plan for giving safety to all ships in transit is in operation, much resembling the well-known "block system." The Company control the departure and entrance of all ships, the order of precedence being wholly in their hands, by which not only security, but the speed of mails is insured. No ship may demand immediate passage for any reason, but preference is given to regular mail steamers under Government control. These carry a blue signal, with P cut out in blank, and a white light at night. The Canal is blocked out in divisions, and at the head office in Ismaïlia a dummy model shows the exact moving position of everything afloat. No vessel may proceed until the way is clear, and a complete system of telegraphic signals insures this condition. Along the banks are small stations, twelve between Port Saïd and Suez, each furnished with a high masthead, from which red and yellow balls by day and colored lights by night announce to each vessel whether to proceed through the next division, or to "tie up" and wait for one to go by from the opposite direction. Ships going in the same direction are not allowed to pass one another. Every five or six miles there is a short widening, called locally a "gare," where vessels make fast. The expression "to gare" is also used.

For a short distance from Port Saïd the Egyptian side shows a narrow plantation of palms and low-growing shrubs, from the depths of which young frogs make insistent music, a cricket or two adding shrill soprano. Beyond the shrubbery, the high moon lighted the shallow Lake Mensaleh into a wondrous sheet of silver, growing wider until no land could be discerned on its farther side. After nine miles it retreats from the Canal, leaving a level desert. The eastern bank as well is a low, sandy plain from which evaporating shallow ponds have left a white sediment of crusted salt all over the verdureless country. As far as el-Kantara the low land continues. With a "high Nile" the west side is often overflowed, by which the Canal banks are really benefited; the mud deposit, thick and black, strengthening them so that no openings have been forced. At el-Kantara the road comes in from Cairo to Jerusalem, less in use now than before steamers went to Jaffa.

Despite the level country on either side, the evening was full of beauty and interest. The marvellous African firmament seemed to disclose more stars than one knew before; a gentle wave followed our slow progress, to break in miniature surf now and then on the sandy banks, and our brilliant arc light, sometimes turned from side to side, cast a theatrical gleam ahead. On the eastern bank distances are marked in miles, on the western in kilometres; and buoys, white on the east, red on the west, mark the deep-water channel. Buoy lamps in the lakes are kept alight day and night, supplied automatically with oil for three months. Before proceeding very far, signals (two red lights above a yellow) informed us that it was our turn to wait the passing of some steamer from Suez. Immediately our speed was slackened, all movement ceasing as we approached the mooring posts. A small boat must always be in readiness for use with each steamer; and, manned by two or three agile Arabs, a dark object shot out from our side, while shadowy forms jumped ashore, making fast, by bow and stern hawsers, to the deeply embedded bollards on the western bank. At once all our lights were extinguished, the signal that we were fast, and the approaching steamer drew near with

much majesty, her search-light shedding a brilliant glory forward as she silently glided on. Her passengers could make little of us, I fancy, as, according to strict regulations, no lights must be shown by the waiting craft; but the passing steamer, a French mail, was herself gay with lights and people, a pretty spectacle, near and picturesque. Another followed while we still lay quiet. The welcome signal to proceed, a red light above a yellow, finally flashed forth for us from the station, the Arabs deftly uncoiled hawsers, cast off, and, jumping into their little boat, were alongside and aboard in an instant, our lights once more awoke, and we proceeded on our quiet way.

Ismaïlia was reached early in the morning, little but its forest of dhow masts appearing. Near the bank a whole native family seemed to be keeping house in a small rowboat. A man, two women, and a child, evidently recently aroused from their slumbers, had lighted a fire in their tiny craft, over which their breakfast was cheerfully cooking. The pink of sunrise was still flushing the sky, and a Moslem here and there prostrated himself toward the east. In pale-green perspective the narrow waterway lay between its yellow desert banks, lost astern in early-morning haze, but leading forward into a mysterious, shimmering landscape of sunny sand, where faint pictures, drawn in vaporous tints, suggested distant mountains bare and rugged, but softened to mirage effects by the luminous lambent atmosphere. On we crept, along our silent, stealthy way, while steamers now and then "tied up" for us, dredgers on their huge, unwieldy machines glanced up uncuriously, and occasional stations, with small irrigated gardens and wide verandas, shaded by palms and brilliantly blossoming trees, made oases of coolness and comfort in that dry land of perpetual sunshine. Farther out on the desert were occasional ruins; and a tiny train made noiseless if deliberate progress toward Suez.

No perceptible tide or current vexes the Bitter Lakes, the height of their water remaining unvaried. During the winter a current runs northward in the Canal, between the lakes and Port Saïd, and opposite in summer, which perhaps depends on changes of height in the Mediterranean. Little evidence has been found to show that the rising of the Nile affects this current in the Maritime Canal, although its fluctuations coincide in seasons. But there is communication with Mensaleh Lake, for, when this is filled by the Nile, the water of the Canal also becomes fresher as far as el-Kantara, the connection taking the form of fresh-water springs at the Canal bottom, which sometimes make upheavals of two or three feet. In April, when Mensaleh is low, the Canal, as indeed is the case always with the Bitter Lakes, becomes much salter than ordinary sea water.

Emerging from the Canal and rounding a point where the line of dry trees at Port Tewfik tells pitiful tales of heat and drought, anchor was cast in the beautiful bay. Along the curve of the shore lay white Suez, aglow in noonday sunshine, a long line of green palms at one side. Armies of white gulls sailed serenely through the still, warm air, occasionally descending *en masse* to the pale-green water, there to float serenely in a little fleet, rising and falling on the gentle waves. Back of both towns, and far to the east, the yellow desert lay blindingly asleep in the sun, stretches of endless sand, great, masterful, mysterious, the palms at "Moses' well" rising in shadowy plumes against distant Arabian mountains. West of Suez the gleaming sand crept upward from the plains of Mohaggiara around the bases of the majestic Atâka range, suddenly giving place to their stupendous rock cliffs and precipices. Not one green or growing thing softens their harsh boldness, but the atmosphere takes them in hand, painting elusive tints on foreground and further distance, spreading a pearly opalescence with suggestions of red flame at the heart of things, finally melting away into the far line of open sea horizon.

From the Straits of Jubal at the southern end of the Gulf of Suez, Mount Sinai and Mount Horeb may be seen, conspicuous peaks in the chain Jebel Musâ. Through the Red Sea, that hot highway of nations, from which the keels and commerce of the world are never absent, past the port of Mecca, where twenty thousand and more pilgrims land yearly in their devout journey, past Mocha and its traditions of coffee, and Zurkur, largest island of the Sea, through the famous Straits of Bab-el-Mandeb, leaving Aden shimmering in dry heat, and Cape Guardaqui looming astern, we are to-day skirting Sokotra, that strange island under British control, about which so little is known. Fine aloes grow wild, four thousand or more Arabs inhabit its valleys, and, despite several wrecks on its eastern point, no lighthouse warns of its proximity—dangerous during the southwest monsoon. In 1896 Mr. Theodore Bent induced a steamer bound for Bombay to land him there as a favor, with Mrs. Bent and a friend, and he spent some months exploring and hunting. An article descriptive of those experiences, and of the flora and fauna, the natives and mountain-peaks, is perhaps the only one ever written of an island passed yearly by countless steamers. The method of return to more frequented regions was problematic, but ultimately he reached Aden in the dhow of the local Sultan, at an exorbitant rate of passage; that potentate having ordered all other dhows to refuse him transit that there might be no competition with royalty.

And now the placid Indian Ocean, with its gentle remnant of northeast monsoon, its exquisite climate, and enchanting moonlight nights, beckons us onward to the Far Orient.

MABEL LOOMIS TODD.

Notes.

'The Francis Letters,' edited by C. F. Keary, will be published speedily by E. P. Dutton & Co. It is a contribution to the Junius controversy. The same firm are issuing 'The Life and Letters of Gilbert White of Selborne,' edited by Holt White, and 'The Plea of Pan,' by Henry W. Nevinson.

'The Cities of Northern Italy,' by G. C. Williamson, in continuation of the late Grant Allen's series of Historical Guides, is on the eve of publication by A. Wessels Co.

A work on 'Southern Wild Flowers and Trees,' by Miss Alice Lounsberry and Mrs. Ellis Rowan, profusely illustrated in color, wash and line, and 'Our Ferns in their Haunts,' by Willard Nelson Clute, are shortly forthcoming from Frederick A. Stokes Co.

Dodd, Mead & Co. invite subscriptions to a 'History of New York Theatres,' by Col. T. Allston Brown, in two volumes, the edition limited to about 300 copies.

Dr. Arthur H. Smith's 'The Convulsion in China at the End of the Century' is shortly to be published by the Fleming H. Revell Co.

In preparation at the Clarendon Press, Oxford, are 'Elizabethan Critical Essays (1570-1603),' edited by G. Gregory Smith, M.A.; 'English Etymologies,' by Dr. W. W. Skeat; 'Notes on the "Divina Commedia" of Dante,' by H. F. Tozer, M.A.; Bishop Berkeley's Works, including the posthumous, in four volumes, edited by A. C. Fraser, D.C.L., 'The Ethics of Spinoza,' by H. H. Joachim, M.A.; 'British Colonies and Protectorates,' by the late Sir Henry Jenkins, K.C.B.; 'Studies in History and Jurisprudence,' by the Right Hon. James Bryce; in the Oxford Musical Series, 'The Seventeenth Century,' by Sir Hubert H. Parry, and 'The Polyphonic Period of Music,' by H. E. Woolridge, M.A.; and, in Arber's British Anthologies, the concluding volumes (first and tenth respectively), 'The Dunbar Anthology,' 'The Cowper Anthology.'

Dr. John Coleman Adams's 'Nature Studies in Berkshire' (Putnams) has pleased some readers, no doubt, by its gentle moralizing, but all by Mr. Arthur Scott's admirable photographs from the widely famous scenery of western Massachusetts. It now reappears on our table in a second "popular" edition, which is still fairly luxurious. The typography is generous and the binding in a tasteful green.

Mr. Abram E. Brown's 'Faneuil Hall and Faneuil Hall Market; or, Peter Faneuil and his Gift' (Boston: Lee & Shepard) is a popular account in particular of the Faneuil family of New Rochelle and Boston, with Peter himself for the leading figure. Pardonable imaginings agreeably clothe the dry bones of fact. A just idea of the colonial trade of the pre-Revolutionary era is conveyed from Faneuil's ledgers and letter-books, and in other ways the Boston of his day is rehabilitated. The Huguenot founder of the hall that was to be known as the Cradle of Liberty is shown to have been, like so many contemporary merchants, both a slave-owner and a slave-trader; a smuggler on occasion. But the market was his chief aim in the public benefaction, and more stress is properly laid upon it and the neighboring Quincy Market. One or two instances are given of free speech suppressed by mobs in this people's hall, but they might easily have been multiplied, or something might have been said of official partiality in granting the use of it. The relation of a famous meeting at which Otis and Sprague figured in denunciation of the abolitionists, to the subsequent Boston mob of "gentlemen of property and standing" in October, 1835, deserved a paragraph. The biographic interest, however, predominates with Mr. Brown.

There is a grain of truth in the dramatic contrast between the beginning and ending of some lives. It is at its poorest in such books as 'The Canal-boy Who Became President,' and at its highest in such lives as David Livingstone's, the Scottish cotton-factory hand who now sleeps with the greatest English dead in Westminster Abbey. Africa will keep his memory unsleepingly, whatever may come or go. Memoirs of him and now the little book by Mr. T. B. Maclachlan in the "Famous Scots Series" (Charles Scribner's Sons) will do something among us—who

forget so soon and follow wandering fires so lightly—to hold us to the old standards of sane and pure duty. Mr. Maclachlan's is an unambitious little sketch, but simply and gracefully done.

'Practical Golf,' by Walter J. Travis, amateur champion of the United States (Harper & Brothers), is a reprint of a series of articles that have been appearing from time to time in *Golf*. Dedicated to all lovers of the game, the book is calculated to fulfil its intention of "diffusing knowledge of the why and wherefore of golf, in order to the better assist in working a general improvement in play." Mr. Travis, than whom there is no higher authority on the finer points of the game, presents his subject in such a clear and forcible way as to make the study of it profitable. But the book is also entertaining.

An attractive little book, devoted to carnations and picotees, by H. W. Weguelin, F.R.H.S., appears from the press of George Newnes (New York: M. S. Mansfield & Co.). The origin of these charming flowers is briefly sketched. The chapters on propagation and culture will answer many questions occurring to the novice in carnation-growing. One of the most interesting parts of the book deals with the use and treatment of these plants in different parts of the British Isles. A discussion of the different varieties and the methods of dressing and exhibiting them appeals more directly to the professional gardener. Although written for British readers, this volume offers many valuable suggestions to American flower-lovers, especially in regard to the growing of carnations in gardens. We might with pleasure and profit imitate our cousins in making more use out of doors of the hardy varieties.

The well-known authority on fungi, Mr. George Massee of the Royal Herbarium of Kew, is the author of a text-book on plant diseases due to cryptogamic parasites (London: Duckworth; New York: Macmillan). The economic importance of the diseases now recognized as belonging to this category is becoming more fully appreciated, thanks chiefly to the efforts of Government investigators and workers in the State experimental stations in this country. The volume at hand presents the most essential information concerning a large number of plant diseases, and indicates the best means of arresting them. It is written for the man who deals in plants in a practical way, and is, therefore, concise, and not too technical in style. The illustrations, of which there are nearly one hundred, add to the value of the descriptive matter.

The main purpose of Professor Deissmann of Heidelberg, in his 'Bible Studies,' now appearing in an English translation (Charles Scribner's Sons), is to show, by means of Greek papyri recently recovered in Egypt and elsewhere, that Biblical Greek is not an isolated diction. The contemporary documents, especially the epistolary correspondence, abound in terms long regarded as distinctively "Hellenistic" rather than "later Hellenic." The effect of such researches upon lexical questions arising in the interpretation of the Septuagint and New Testament is obvious and important.

That excellent little series of brochures, "Der alte Orient," is being reproduced in English by Mr. David Nutt, London. Wiedemann's 'Realms of the Egyptian Dead' is the first number to appear. The translation is by Miss Jane Hutchison, and seems to be faithful, and is certainly readable. As a handy introduction to Egyptian eschatology, the little pamphlet can be highly commended. Professor Wiedemann is an Egyptologist of the first rank; he has made a special study of Egyptian religion, and of it "what he doesn't know isn't knowledge." The amazing thing, in view of popular books, is, how little such a man can claim to know.

For the tenth issue in the series of Yale Studies in English, 'The Earliest Lives of Dante' (Henry Holt & Co.), Mr. James Robinson Smith has retranslated the complementary biographies by Boccaccio and Bruni Aretino, with a fragment from Filippo Villani. His version is fluent and agreeable, but one could wish that Boccaccio's text could have been accompanied by parallel passages from his unfinished Commentary on the 'Divine Comedy,' as regards the poet's appearance, his name (the allusion needing explanation), his reasons for writing in the vernacular, and the story of the loss and discovery of the first seven cantos of the poem. They would be worth the pains of a second edition, if such studies ever go beyond the first, and may be found conveniently to hand in O. Zenatti's 'G. Boccaccio; Dal Commento sopra la Commedia di Dante' (Rome: Società Editrice Dante Alighieri).

Henning's German translation of 'The 1001 Nights' has now been completed by the addition of a twenty-third and twenty-fourth *Doppel-Bändchen*, being the sixth and seventh of the *Nachtrag*. These are translated from Burton, and contain the remainder of the stories in the Wortley-Montague text, with some omissions. Last comes an appendix of about forty pages on the history of the 'Nights,' which is a careful compilation pure and simple. Herr Henning is to be congratulated on the conclusion of his long and conscientious labor; our only regrets are that the *Nachtrag* was not extended further, and that no general index has been added.

The *Geographical Journal* for May contains a description of the northwest frontier of India, by Col. Sir T. Holdich, of which the principal note is the wonderful variety of climate, scenery, and peoples. Contrasting the delightful landscapes of the north with the arid wastes of Baluchistan, he adds that into its inner recesses but few Europeans have ever really penetrated, and there must exist in it thousands of peoples of different races who have never seen a white face and never heard an English word spoken. The strength and vitality of Islam, its fanaticism and orthodoxy, he says, are to be found in these frontier peoples. With them the Mulla is a moving political force, while with the Mohammedans of the plains he is of little account. The paper on the topography of South Victoria Land, by L. Bernacchi of the Newnes Expedition, is a record of observations having for one object the solving of the enigma whether, within the Antarctic circle, "the land takes the form of a vast continent, or an archipelago of islands smothered under an overload of frozen snow which conceals their insularity, or islands whose shores are washed by the ocean." Another object was an examination of the phenomena connected with the great ice-barrier, which Sir Joseph Hooker says "presents the most remarkable unsolved glacial problem in the world." Mr. Bernacchi is inclined to believe that it is "nothing more than a huge tongue of ice flowing eastwards into the ocean for a distance of perhaps 500 miles, and is possibly not more than 50 miles in width." Other articles are upon a survey of the Sobat region of the upper Nile basin by Major Austin, and upon the sixth-century mosaic map of Madaba, "the earliest piece of Christian cartography, and one of the oldest geographical plans in the world outside the Egyptian and Assyrian monuments." It was originally about 49 by 20 feet in size, and is mainly concerned with the country between Nablûs and the Nile.

The scientific results of the voyage of the Norwegian fishing steamer *Michael Sars*, given in *Petermann's Mitteilungen*, number four, relate particularly to the hydrography of the northern coasts of Norway and Iceland and the banks about Jan Mayen, and the distribution of some of the predominant forms of plankton in the same ocean regions in July-September, 1900. Accompanying maps show the course of the vessel and the distribution of the three forms of ceratium—tripos, longipes, and arcticum. Other articles are a review of work done in the seventy-five scientific balloon ascensions made in Germany in the years 1888-'99, and late information of the expeditions of Koslow in the region of the Chinese Altai and of Professor Fischer in Morocco.

Of Northampton, Mass., Mr. C. A. Cutter, Librarian of the Forbes Library, says, in his sixth annual report, just issued, no city in the world can equal, in quantity or quality, the circulation of the town's three public libraries. As for quality, the average use of fiction in public libraries is 75 per cent.; here it is but 51.5 per cent. The average American circulation, estimated from 93 cities and towns, is 1.6 volumes per head. In the 37 Massachusetts cities it is 2.7 volumes per head. The figure for Northampton's home circulation is 7.22 volumes per head. "And yet there are also in the city a hospital library (for the patients), a law library, a college library, two private-school libraries, and two flourishing book clubs." What are proper inferences regarding the intellectual and moral rank of the population of this favored town?

The Bureau of Statistics of New Jersey has put forth an historical sketch, from the pen of its chief, Mr. William Stainsby, of the establishment and growth of 'The Jewish Colonies of South Jersey,' illustrated photographically (Camden, N. J.). The experiments described at length are the settlements at Alliance, Rosenhayn, Woodbine, most flourishing of all, and Carmel. Agriculture is carried on in all, combined, more or less extensively, with manufactures, yet demonstrating by itself that *some* Jews at least are capable of farming profitably and contentedly. Mr. Stainsby enumerates other attempts, in the same State, which failed, without exception owing to the fact of speculators having been the promoters.

The first important attempt on the part of Scandinavians at home to aid the efforts of their countrymen in the United States to preserve Scandinavian culture, has been announced. The Chicago *Tribunen* of May 15 contains an address, signed by about fifty leading Swedish officials, bishops, professors, and authors, including the rector of the University of Upsala, the Archbishop of Upsala, Prof. Adolf Noreen, Verner von Hei-

denstam, and Selma Lagerlöf, soliciting subscriptions from Swedes in Sweden for a fund of $30,000 for the establishment of a professorship in some branch of natural history at the Augustana College at Rock Island, Ill. The subject of natural history was chosen because to foreigners Swedish science is represented by Linnæus and Berzelius. The address opens with a cordial recognition of the devotion to Swedish culture shown by Swedish Americans, and of the importance of encouraging this feeling by indicating in some substantial way that it is appreciated by their kinsmen across the sea. The only conditions imposed upon the acceptance of this fund, if it be raised, are that the Swedish language shall always remain the medium of instruction at the college, and that a fund of $60,000 be raised in this country for the establishment of two additional professorships, the subjects suggested being church history and the Scandinavian languages and literatures, with special reference to Swedish.

The highest type of British journalism has suffered a severe loss by the sudden death of Mr. William Clarke, while on a tour in Herzegovina in company with his friend, Mr. J. A. Hobson. Not much of his work appeared over his own name, for he was the least obtrusive of men—no mention of him will be found in 'Who's Who'—but, in spite of chronic and painful ill-health, he had anonymously exercised a healthy and powerful influence for many years. At the time when the *Daily Chronicle* was under the direction of Mr. A. E. Fletcher, it was from Mr. Clarke's pen that came many of those brilliant editorials which so effectively applied the highest ethical principles to political and social life. Later, he had done much work of equal quality for the *Spectator*, which says of him in an obituary paragraph that "he had, we verily believe, read and assimilated every intellectual book in three languages, and might, had he been spared, have given the world some work not of ephemeral value." He had been much depressed by the present triumph of that imperialistic temper of which he was always a keen and uncompromising critic; and a few months ago contributed to the *Contemporary Review* a remarkable forecast of the future of England as the pleasure-ground of other nations, instead of being any longer a force in international affairs.

—A map of the famine area and eight conventional (though original) photographs of decent misery add the adornment customary in famine descriptions to Mr. Vaughan Nash's little volume entitled 'The Great Famine and its Causes' (Longmans, Green & Co.). The book itself is a collection of letters originally published in the Manchester *Guardian*. The descriptions are vivid; the author had exceptional opportunities to see the whole area of famine. He is an alert observer and has some unpalatable views as to the economic situation. The facts he records are real, and his conclusions are generally sound. "In spite of the famine, there is grain enough and to spare in India," is a paradox not presented for the first time by Mr. Nash, but it needs some repetition to make people believe it. Equally true and trite is the observation that the native *ryot* is being ousted out of his farm by the usurer. The Government's part in this was primarily not greed, as the good Hindus think, but indiscretion. Into the hands of a child-minded adult was put a man's privilege. The silly peasant, pressed for money (this time the Government was simply just), sold out his heritage, hitherto inalienable, and the usurer at present is the great landholder, the lord of India. The best the Government can do now, since killing the usurers is not possible, is to restrict land alienation, establish usury laws, lower taxes, and have them paid in kind. This last will probably be thought as impracticable as killing the usurers, especially as its implication should be that when the *ryot* has no crop, he need not pay a tax for it. At present he pays in cash (for which he is at the mercy of the banker, that is, usurer), and this often represents the modest tax (of one-third of the produce of his farm) upon a non-existent crop; whence comes borrowing from the kind usurer, and thence comes starvation. Of course, the obvious objection is that a revenue which sinks or rises according to crops is not so useful as a support of military operations in Africa as one that is kept at the top level by being exacted whether the crop which it is supposed to represent is existent or non-existent. The Government, however, is very benevolent and has established relief-works for the impoverished peasants, poulticing gently the skinned victim of the practical politician whose rule of thumb is called "Indian polity." Mr. Nash's book, which brings some of these facts into ghastly relief, will probably have no more effect than have had the liberal views of other reformers; but that is the fault of the Government. When the voice of the legislator is heard among the shouts of the bravos, and the Forward Movement on the frontier has become an Upward Movement in India itself—but there is no good in wasting time in vain speculation. Meantime, Mr. Nash's book may interest the thoughtful, as it will doubtless irritate those patriots who think that the best use of a Hindu is to starve him for their glory.

—'German Bookplates,' by Karl Emich, Count zu Leiningen-Westerburg, is the latest of Messrs. George Bell & Sons admirable "ex-Libris series." More than four hundred reproductions of German plates—most of them drawn from the author's private collection—illustrate the work. The early phases of this minor art are the most interesting. The beautiful woodcut examples of the sixteenth century—among them unique colored examples—by Dürer and his followers, have never been surpassed in appropriateness to the printed page, nor, perhaps, in decorative beauty. Their like is not found in England until the pre-Raphaelite designers of our own time restudied, under Ruskin's guidance, early German and Italian woodcuts. By way of offset, the interesting white-line plates in the Bewick style, perhaps the most original in the English series, are quite wanting here, and the rococo plates of about the same period are nowise comparable to French work of the same character. Modern designs occupy a modest space in the volume, and their merit, as here represented, is correspondingly slight. One notes, as compared with other volumes of the series, an excess of heraldic designs, and a lack of bookplates of famous owners. Such criticism applies, however, only to the material. The author's part is excellently done. Notes on the differences between German and English heraldry will be useful to sticklers for form in these matters, and the lists, indexes, and bibliographical notes are apparently compiled with German thoroughness. The Macmillans are the American publishers.

—We have received the second part of Edmond Pottier's 'Album des Vases Antiques du Louvre' (Paris: Hachette & Cie.). As those who have seen the first part know, these albums are intended by the author as a supplement, or more correctly as a complement, of the valuable catalogue of the collection which he is publishing. Indeed, it is in some respects more of a catalogue in the strict sense of the word than the catalogue itself; for whereas the latter contains a full and detailed description of the various styles and periods of Greek vase-painting, it refers to the vases in the collection only as they illustrate the points under discussion, and does not include complete descriptions of any of them. It is really a hand-book of the subject, written with especial reference to the vases in the Louvre. The album, on the other hand, contains numerous illustrations of the typical examples of each style, selected from the Louvre collection, with detailed descriptions not only of these, but of such other vases of the same style in the collection as have been published elsewhere with illustrations. Whether this is the most practical or convenient manner of dividing the material is perhaps an open question, but it is one that we need not discuss now. This part of the Album includes Rooms E—G, comprising the black-figured vases of the Ionic and Attic schools, and the early red-figured vases of the latter. As in the first part, the illustrations are half-tone reproductions of photographs taken directly from the originals. We wish we could share the author's satisfaction at the results; but the finer the drawing on the vases themselves, the more melancholy do these seem to us. In the early styles, where the object of the illustrations was to give as definite an idea as possible without colors of the shape of the vases and the character of their decorations, the album served its purpose perhaps better—because more completely—than any other work on the subject that has yet appeared; but now that it is reaching the period of the masters, the truth is once more forced upon us that a reproduction is not necessarily accurate because it is mechanical, and that the camera can distort and exaggerate just as much as the draughtsman can flatter or "improve." In the two drawings by Euphronios, for example, which form the last two plates of this part, the firm, crisp lines of the originals become utterly flat and lifeless, and our attention is caught by every break and discoloration in the surface. It is the defects, and not the beauties, which are made prominent by this process; and we hope that before the third part is brought out, some means may have been found of overcoming what we feel to be a serious drawback.

—After an interval of two years, Prof. Rhys Roberts has given to the public a second instalment of his work on the Greek critics and rhetoricians. The edition of the treatise Περὶ Ὕψους won much favorable comment, and the interest in it will doubtless be greatly increased by the high estimate put upon the inherent critical excellence of the treatise by Professor Saintsbury in the opening volume of his 'History of Criticism.' The critical work of Dionysius of Halicarnassus is less known to the gen-

eral reader than the Περὶ Ὕψους, but the volume before us, 'Dionysius of Halicarnassus' (Cambridge, Eng.: University Press; New York: Macmillan), will doubtless find a goodly circle of interested readers. Of the text of Dionysius it contains but a little over fifty pages—the two letters to Ammæus and the letter to Pompeius. This is preceded by a fifty-page introduction on Dionysius as a Literary Critic, and accompanied by a free English rendering on parallel pages. Some twenty pages of notes, a glossary of rhetorical and grammatical terms found in the three letters, and a bibliography covering all the rhetorical writings of Dionysius, complete the volume. Dionysius, we are told, "concerns himself mainly with questions of literary form and technique, whereas 'Longinus' dwells more on that moral nobleness which he thinks he discerns in all really great literature. The former has chiefly in view the art of literature, the latter its spirit." In general, Professor Roberts is not far from the Quarterly Reviewer of eighty years ago, who remarked that if Dionysius "wanted something of the exquisite taste of Longinus, he had at least an equal share of his judgment." One meets in him frequently passages characterized by the common-sense way of looking at things so prominent in the pages of Quintilian. The glossary of technical terms might profitably have been expanded by a more liberal supply of references for comparison, not only from the Greek, but from the Roman critics and rhetoricians as well. Professor Roberts expects soon to present a similar edition of the Greek treatise 'Demetrius de Elocutione,' and in the indefinite future a 'History of Greek Literary Criticism' and a critical and annotated edition of the 'Rhetoric' of Aristotle.

GARDINER'S COMMONWEALTH AND PROTECTORATE.

History of the Commonwealth and Protectorate, 1649-1660. By Samuel R. Gardiner. Vol. III. 1654-1656. Longmans, Green & Co. 1901. Pp. xx, 513.

Mr. Gardiner continues, and will, we trust, bring to its close, his incomparable chronicle of the Protectorate. We use the word "incomparable" of set purpose, because his narrative of the events which took place from the accession of James I. to the last years of the Protectorate is unlike any other work with which we are acquainted. It is not a history in the ordinary sense of that term. It lacks some of the charms of historical narrative; it exhibits no special graces of style; it does not abound in striking portraits of persons or brilliant pictures of events; it contains few generalizations and no paradoxes. It is, in fact, an annual register; but it is an annual register composed by an author whose industry and learning have freed him from the errors of ignorance, and whose judicial fairness has delivered him from the errors of passion or prejudice. Mr. Gardiner shows us the actions of remarkable men and the transactions of a most noteworthy time in the dry light of truth. We are made to know the facts; it is for each reader to consider what are the inferences which the facts warrant.

At one conclusion a reader of Mr. Gardiner's last volume will arrive with considerable confidence: the heroic legend of Cromwell created by the genius and imagination of Carlyle has been destroyed; it must pass away like the grand Napoleonic tradition because it cannot stand the dry light of historical truth. The purpose of the present article is simply to show how and why it is that Mr. Gardiner's narrative renders impossible the childlike faith preached by Carlyle in the inspired heroism and the statesmanlike sagacity of the greatest among the Puritan leaders.

That Cromwell's policy was not always heroic becomes apparent on an examination of that part of his statesmanship which was most certainly guided by religious enthusiasm. His loyalty to the Protestant cause stands above suspicion. It was to Cromwell and to the best Englishmen of his day, as it still appears to many of the best and wisest Englishmen of our own day, the cause of truth and of God. But even here, though the genuineness of Cromwell's faith is certain, its disinterestedness is not quite so clear. Here, as elsewhere, he was a typical Englishman; he saw no reason for keeping piety apart from business. He wished to strike a blow at the foes of Protestantism; he also wished to enrich England. The two objects, it seemed, might be attained by one and the same stroke of statesmanship. To plunder Spain was a method of at once lessening the resources of the Papacy and at the same time replenishing the empty treasury of the Commonwealth. In adopting this course of action Cromwell followed the Elizabethan tradition. To attack Spanish colonies had long been, in the eyes of Englishmen, the best way to serve Protestantism and to do a good stroke of business.

Sometimes, however, trade and religion did not easily go hand in hand. Cromwell's undoubted veneration for the name of Gustavus Adolphus, and his unfeigned joy at an alliance with Protestant Sweden, secured a most sincere and fervent welcome for the Swedish ambassador. When, however, it became apparent that the predominance of Sweden might be injurious to England's commercial interest in the Baltic, the Protector's policy began to waver. There was, as we understand Mr. Gardiner, no treachery. There was in Cromwell's action nothing of which a diplomatist could complain; but, then, as a rule, diplomacy does not pretend to aim at higher than worldly objects, and in this instance, as in many others, the charge which might plausibly be made against Cromwell is not that he sank below the moral standard which in his day guided ordinary politicians, but that, while he entertained genuine religious aspirations which have never influenced ordinary politicians, his conduct was, in point of disinterestedness, very much on a level with the conduct of ordinary statesmen. The combination, in short, of religious fervor with a keen eye to the main chance has a nasty look. It necessarily involves a kind of double-mindedness, and constantly leads to causes of action which an enemy will brand, not quite fairly, with the name of duplicity.

A lack of heroic enthusiasm does not, it will be said, of itself suggest a lack of statesmanlike foresight. This is true, but, unfortunately for Cromwell's reputation, the latter years of his rule, the years in which he was the almost absolute governor of the most powerful of European states, are, if we accept Mr. Gardiner's account of the facts, filled with failures in statesmanship; and, what is of supreme importance, Cromwell's failures are closely connected with unmistakable defects in Cromwell's character. At home he wished to establish, not, indeed, what a modern Englishman means by Parliamentary Government, but a government in which a Parliament should play a great and important part; and it is one of the finest traits of Cromwell's nature that, overbearing and despotic as he often was, he clearly had no wish to destroy those liberties of England for the preservation of which the Long Parliament had engaged in war with Charles. But, though he wished to preserve English freedom, he never could really come to terms with his own Parliaments. We are far from asserting that the mistakes committed by the Parliamentary Constitutionalists were not as great as the blunders of Cromwell, or even greater. To any man who studies the Constitution embodied in the Instrument of Government the folly of the Parliamentarians in refusing to come to any arrangement with Cromwell is all but incomprehensible. One can hardly understand how men who must have dreaded a restoration should have failed to perceive that, to weaken the Protector, must, as its immediate result, produce either anarchy or despotism, and as its ultimate result lead to the return of the Stuarts. We have not a word to say for Cromwell's Parliamentary opponents. Their position is the more strange when one learns from Mr. Gardiner that the Protector was prepared to go great lengths in the way of concession, and that all he required was that he should continue to have a real control of the army, and should be provided with a revenue adequate for the maintenance of the armed forces, and that Parliament should respect "fundamentals" which were intended to secure the religious liberty of all Protestants. Still, the fact remains that Cromwell's Parliamentary policy was, in the years with which Mr. Gardiner's volume deals, a failure.

If Cromwell could not come to terms with his Parliaments, still less did he know how to conciliate the nation. He was the most successful of English generals. He had restored order; he had reconquered Ireland. He was, to use his own celebrated expression, a "constable" whose one duty was to maintain order, and, as far as might be, enforce the law. He was the one man who could ward off the danger of anarchy, on the one hand, and of insolent military despotism on the other. There are signs, as may be gathered from Mr. Gardiner's pages, that Oliver's assumption of the crown would have met with the approval of a considerable part of the nation. It assuredly was desired by the lawyers. Yet Cromwell, with all his advantages, never really gained the good-will of the people. If you ask why he failed in this, the story of the Major-Generals gives a sufficient answer.

The appointment of the Major-Generals met, no doubt, a pressing danger. It was an act of vigor: it established in effect a military dictatorship controlled by the Protector. The immediate difficulty of the moment was met, but the Protector thereby threw away his best chance of reconciling the nation to his rule. The very fact that Cromwell's military representatives were not real despots, and tried, at any rate, to act as far as possible in accordance with the law of the land, is the condemnation of his policy. It shows that he did not wish to establish a despotism, and that despotic

government was not required by the necessity of the time. But, under these circumstances, the authority wielded by the Major-Generals was an insult to every man throughout the country who cared for the preservation of England's liberties. The rule of the Major-Generals was in substance, disguise it as you might, the power of the sword opposed to the supremacy of the law. Add to this that an authority which was itself a defiance of law was used as a means for the enforcement of morality. No device was more certain to bring upon the government of the Protector more widespread and more bitter popular hatred. Easy-going persons who cared nothing about law and politics, must have been irritated past endurance when officers and martinets closed public houses, and punished, or enforced the punishment of, gamblers or cock-fighters; while men of another type who sympathized with Oliver's zeal in the reform of public manners, were disgusted when they found that zeal for religion was turned into a plea for overriding the legal rights of Englishmen. The rule of the Major-Generals in 1655 goes far to explain the Restoration in 1660.

Of Cromwell's administrative capacity no reasonable critic can entertain a doubt, yet, oddly enough, Mr. Gardiner's last volume contains an account of a military fiasco which casts grave discredit on the Protector. The attack on Hispaniola was Cromwell's own design; its perils were detected by the common sense of Lambert; it ended in a complete disaster, the character of which could not be concealed either from the Protector or from the public by the occupation of Jamaica. The cause of the failure is, Mr. Gardiner admits, to be sought, not in the misconduct of the officers, though misconduct there was, but in the conduct of Oliver himself.

"It was not, indeed," he writes, "to be expected of the Protector, overwhelmed as he was with political and administrative anxieties, that he should have applied himself . . . to the details of service . . . But, in all probability from sheer ignorance of tropical conditions, he sent forth an army to establish England's supremacy in the Indies, which, in a military sense, was no army at all. He had been told of the weakness of the Spaniards, and had a sincere conviction that he had Providence to friend. Of the war against the burning sun and the waterless roots of the hills he had no conception. It was said, probably with truth, that of the 9,000 who landed in Hispaniola there were but 1,000 old soldiers; the rest were the rejected of English regiments, or, still worse, the offscourings of West Indian Colonies, not one of whom had seen service in any shape or form. Oliver, as ever, trusted in God. For once in his life he had forgotten to keep his powder dry."

That a great general or a consummate administrator should once in his life make a blunder, is a matter which in itself hardly calls for comment; but the reverse in Hispaniola is of more importance in our estimate of Cromwell than a mere isolated blunder. The mistake is very closely connected with the weakest points in his statesmanship. A trust, which may fairly be called superstitious, in the favor of Providence, and an inveterate habit of energetic and generally masterly action which, though it often gained his immediate end, was grounded on very inadequate knowledge of the conditions with which he was called upon to deal—these defects ought to be fairly acknowledged when we consider his Irish policy. That the Cromwellian settlement was, on the whole, a failure, will now probably be admitted even by the admirers of the Protector. On this point we are the less careful to insist because Mr. Gardiner, influenced by his generous hatred of cruelty and wrongdoing, hardly does full justice to the strong side of Cromwell's plans for the government of Ireland. He never fully recognizes that the establishment of perfect equality among all Protestants, and the Parliamentary union of Protestant Ireland and Protestant England, were ideas in advance of Cromwell's age which, under happier circumstances, might, from an English point of view at any rate, have been fruitful of good. What Mr. Gardiner does, however, make as plain as day is, that Cromwell and his associates tried to carry out a policy of excessive severity without anything like adequate knowledge of the country or of the people with whom they had to deal. The blunders they made were often elementary. They did not, for example, know, when intending to plant Ireland anew with an English population, what would be the amount of the land at the disposal of the English Government; nor, indeed, as we gather, what was the amount of land which Ireland contained.

Cromwell, in fact, was the typical representative of his party and of his countrymen. He entertained the Puritan ideals in their best and highest form, but he also shared, far more fully than his admirers are willing to admit, the Puritan superstitions. His God was the Hebrew God of battles, and a victory was therefore a sure sign of divine favor. His God was the God who hated the heathen, and he, therefore, expected that the foes of idolatrous Papists should, to use Mr. Gardiner's quaint expression, have "Providence to friend," and that, owing to the favor of Heaven, Protestant soldiers, even of an inferior type, should easily vanquish idolatrous Papists. He possessed all the energy and the imperial capacity of his countrymen, but he showed, like most Englishmen, a lack of sympathetic imagination, and, in common with the men who have founded the British Empire, he gained the respect, but failed almost invariably to conciliate the affection, of foes or of subjects. Nor is it easy, after reading Mr. Gardiner's pages, to deny that, in common, not indeed, with all, but with many of the best-known among English generals and statesmen, he relied far more on bold and resolute action than on that scientific knowledge of facts and principles which alone makes vigorous action conducive to permanently beneficial results. The paradox of Puritanism, which is nothing else than the strange combination of constant triumphs leading to ultimate failure, repeats itself in the career of by far the greatest of Puritan leaders.

Lysbeth. By H. Rider Haggard. Longmans, Green & Co.

"From a Swedish Homestead" come stories of Sweden, myths of Norway and of Italy. In all there are the Scandinavian imaginativeness, the love of children, of nature, of fairy tales. There is a northern proclivity to gruesomeness too, which supplies the shadows in these half-supernatural tales; and there is a certain alternation of clumsiness with a really artistic touch that leaves a not unfamiliar impression of heaviness on the mind. Whether this feature or the tenderness blossoming in the heart of every one of the stories will carry the day with the reader, will depend partly on his national sympathies and partly on his sense of the value of time.

"A waiter has plenty of opportunities if he only makes use of them, for if it comes to a matter of figures, I suppose there is more love-making done in a month under the electric light of the restaurant than the moon sees in a year—leastways so far as concerns what we call the civilized world." From this canny point of view Mr. Jerome has evolved five stories of pictorial events that came under the eyes of Henry the Waiter. They are slight, but ingenious, and humorous in a wholly unpretending fashion, and will better repay a half-hour's reading than some more elaborately made whimsical literature.

When Philip Chater was unaccountably seized with a desire to personate his twin brother, he little foresaw that it would lead him into three hundred pages of tangle. But so it was, and tangle of a highly melodramatic kind, swinging from tragic to comic, from murder trials to circus caravans, from lovely girls to tattoed sailors, from stanch foster-mothers to cut-throat villains, from ancestral halls to thieves' dens. In fact, the colors are laid on with a spendthrift hand, suggesting that they were not priceless, and though, as an original culmination, lovely woman rushes into the court-room at the supreme moment, crying "That man is not Dandy Chater," we feel that the excitement has, after all, been only skin-deep.

Over 'Philip and Philippa' hangs the atmosphere of a day that we thought was dead. Miss Ferrier might have written the dialogue; the aboriginal American tourist might have sketched the European itinerary; Una might have devised the plot, barring her lion. A dash of modern flavor is introduced with almost pathetic delicacy in the sub-hero and sub-heroine, an American betrothed pair who form the relatively high light in a picture otherwise done in quarter-tones.

The 'Story of an Ohio Town during the Civil War' must needs deal with familiar phases of stress and storm. Ohio pioneers from Yankee-land, with sons who join Mor-

gan's raiders; Virginian pioneers, with sons who fight for the Union; neighbors who are friends in all but politics; sweethearts in a chaos of counter sympathies—these are the natural material of a story of the time and place. Where Mr. Dunbar has exceeded and excelled other tales of the sort, is in the striking delineation (occupying too small a corner of his canvas) of the collision line between the free Ohio blacks, whether born free or manumitted before the war, and the freed contrabands of war pouring over the Ohio border to find their own race despising them and closing even the churches against them. The "Black Invasion" has a tragic interest peculiarly its own, not lessened by its brevity and the speedy coming of the day when free and contraband huddled together for common safety, and when the black boy who killed Raymond Stothard did it, "not because he was fighting for a principle, but because the white man had made his mother cry the day before. His ideas were still primitive." Mr. Dunbar's clear style adds much to the effect of this study of war days.

'The Warners,' "an American story of to-day," is a futile tale of true love, honest toil, wealthy oppression, loud-mouthed Anarchism, fisticuffs, dynamite, and other such boon companions in fiction. It is not quite bad enough to call for deep cursing; certainly not good enough to win benediction.

There is not much to be said of 'The Vengeance of the Mob' as to form and finish, but it is a horribly visible panorama of the diabolic wreaking of Lynch law upon the negroes among the "Crackers" of Florida. Mr. Hamilton has closely studied the poor white population of the South. He is inflamed with indignation at the atrocities practised there in the name of justice, yet does not weaken his position by describing the negro as a saint. His book is obviously a call to repentance and one of fearful appeal. Deliberate encouragement by the whites of acts too terrible for relation leads to the climax of the love part of the story. But is it not, after all, something of an anti-climax that the girl who has egged on the mob to torture a negro should be crushed by finding she has caused the death of the wrong person? Is it so very much worse to cut into strips and burn an innocent man than a guilty?

It poultices the nerves to turn for an hour to Vermont and the bringing-up in truth and wood-lore of 'Sam Lovel's Boy.' Lovers and lamenters of the late Rowland Robinson will meet again with satisfaction Gran'ther Hill, Uncle Lisha at his cobbling, Mrs. Purington still sniffing at her ammonia bottle in her unreconcilement to things as they are, and the ever-welcome Ann Twine, him of the silver tongue, the braggart, of matchless dialect. Minks, foxes, trout, dogs, and a boy are others of the cast. All the spring sap in the veins is stirred by mention of the "shedblow tree over there in the woods 't looks ju' like a haycock ketched in a snowstorm." The atmosphere of a Vermont winter, too, is no less keenly felt on reading of the spelling school, where Solon Briggs, "making excursions into his own wonderful vocabulary," gives out the word "superguberosity."

Of Vermont, again, is 'Old Bowen's Legacy'; reminiscent, moreover, of villagers seen and known in the author's earlier 'Deacon Bradbury.' It is not about forests and fox-traps, but about the village of Fenton, the lawyer, the storekeeper, the spinster, the deacon, the farmer. The motive concerns a legacy left with three trustees to give as they shall see fit at the expiration of the year, which disposition the reviewer will not here disclose, regarding it as a professional secret. The evolution of character in the case of the tyrant husband seems quite improbable, and his experience at the hands of the professor of legerdemain is startling. Yet the improbable and the startling fail in some way to give marked individuality to this novel. No doubt, however, it will yield content to those who like their story-books highly seasoned with bread and milk.

'The Wizard's Knot' is woven of the best matter afforded on Erin's soil. It sings the wild Celtic strain of blood that makes poets of some, half madmen of some, of others wizards and twiners of the cords of fate. Nor absent is the familiar Irish spirit of every-day. "When you can't cure the disease, you play jigs to it." Most characteristic of all is the meeting of both temperaments in one person, and this too is exemplified; but as a whole the story is sombre, gloomy, and shiveringly fantastic; captivating the imagination, rich in color, distinguished in style—in all ways a masterly work in the field of Celtic romance.

'Martin Brook' began life as an ill-treated little apprentice, and ended it as a Methodist preacher. The sight of a fugitive slave in New York State given back to his master turned Martin from law to gospel, and made of him an abolitionist who suffered for his opinions, but lived to see the emancipation of the slaves. The story is long, and, to tell the truth, prosy; but has its place for readers not saturated with books compounded of anti-slavery, love, and Methodism.

Had Blanche Amory lived in the South before and after the war, and written a book about it, it would have been worded much as is 'In White and Black.' The "wounded deer," the "surging of sorrow," the pages of love and lofty declaration from Him crowned by Her—"Mr. Kenyon, I should be insincere if I should say this is a surprise"; the "Happy souls, we leave you to your bliss," belong by rights to the authoress of 'Mes Larmes.' Enriched by Mammy dialect, these flowers of speech form an international alliance that could be effected in only one region of the world. A touch of departure from stereotype is the glimpse into tramp life afforded by the adventures of the hero during his temporary rôle of wounded deer. We have only praise for the noble paper and print.

An orgie of adventure awaits him who cuts and hews his way through the five hundred pages of Rider Haggard's 'Lysbeth.' When the achievements of this century are reversed by the next, it may come to pass that our historic novels of hairbreadth 'scapes will be condensed back into the original history, which will then be found to be of hairbreadth scope. But for the dedication to the memory of William the Silent ("et les morts ne reviennent pas!"), and for some skirmishing between religions, and for the consecration of the Recovered Treasure to saving the city of Leyden, the scene of 'Lysbeth' might as well have been Zanzibar in the eighth century as Holland in the sixteenth. Reciprocally, it may equally well be in Holland, since, though each heart can supply a different place, they cannot fail all to sing Rider Haggard. Far above and beyond the local claims of history are the figures of girls surmounting floods on windmill wreckage; hags of sixty scuttling ships, giants with long beards bowling over three prison guards at once and holding doors fast against soldiers by the half-dozen. (Incidentally, it is cautionary to find the giant temporarily forgetting that his sword hilt holds the map which is the pivot of the plot. If the giant forgets, what may not happen some fine day to the reader?) Nor, in these days of empire and civil-service extension, is the competitive examination style of narration limited to any particular spot on earth. "Was it not worth while to take the risk? If he hurt her would she not crush him? Would not history repeat itself? By the way, why was the man so fond of playing cards?" Peace be with them that love to read these things. Plenty they are not like to lack.

A Sailor's Log. By Robley D. Evans, Rear-Admiral, U. S. N. D. Appleton & Co.

The author of 'A Sailor's Log' is unfortunate in the sobriquet of "Fighting Bob" Evans, bestowed upon him by injudicious admirers. This would indicate that he was a mere vulgar brawler, always "looking for trouble," whereas the contrary is clearly revealed in the record of his forty years' experience as a naval officer. When it is time to fight, no man fights with greater tenacity or determination, as, when acting ensign, he took part with the naval contingent in the land attack on Fort Fisher, in our civil war. When prudence is called for, no one is more capable of self-restraint, as when, in command of the *Yorktown*, he successfully resisted the efforts of the Chilians of Valparaiso to goad him into the committal of some act of hostility. When the moment arrives for the display of fine magnanimity, he is equal to it, as when, on the battle-ship *Iowa*, after the naval fight off Santiago, he received, as prisoners of war, Admiral Cervera and other officers of the defeated Spanish squadron. These characteristics illuminate every chapter of the book.

Robley Dunglison Evans is a native of Virginia. He was appointed to the navy from the then Territory of Utah. In order to legalize the appointment it was necessary that he should become a resident of Utah for a specified period. This involved a journey thither at a time when it was beset with perils from hostile Indians, and it was in an encounter with these that the author received his first wound—an arrow in the tendon of the left ankle. From the Indians he harvested also his earliest sobriquet—"Little Breeches"—on account of his youth and diminutive size. After completing the period of residence in Utah, young Evans reported at the Naval Academy, which he entered in September, 1860. He was at Annapolis at the opening of the civil war, and was among those transferred to Newport in consequence of it. Remaining loyal, he was commissioned acting ensign in 1863 and ordered to the *Powhatan*, which in due season was attached to the fleet, under Admiral Porter, that assisted in the attack on Fort Fisher. Early in the engagement he was wounded in the left leg, just below the knee. After effecting temporary repairs he resumed

AN EDUCATIONAL DIRECTORY.

School Trustees, Principals, Teachers

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters. In its special field of political and literary criticism the *Nation* is unlike any other periodical, American or foreign. Going, as it does, to all the principal libraries, reading-rooms, and clubs, and into thousands of the best homes, addressed to the intelligence of the country, the *Nation* finds its readers able and anxious to secure for their children the best educational advantages.

The School List in the *Nation* has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to
THE NATION, 206 to 210 Broadway, New York.

BOOKS ON NATURE STUDY

First Studies of Plant Life

By GEORGE F. ATKINSON, Professor of Botany in Cornell University. 85 cents.

In this new book by Mr. Atkinson is presented the really unusual and attractive combination of scholarship with a rare felicity in writing for young people.

The object in presenting these studies has been to interest the child and pupil in the life and work of plants.

Moths and Butterflies

By MARY C. DICKERSON. Large 8vo, cloth. Profusely illustrated. $2.50.

This will undoubtedly prove the most popular book of its kind which has appeared at a reasonable price. The author's intimate knowledge of her subject, her thoroughly popular and entertaining style of writing, and her skill with the camera and pencil are some of the qualities that will commend the book to all observers of out-of-door life.

Ways of Wood Folk

By WILLIAM J. LONG. Fascinating descriptions of animals and birds as seen at play in their homes. With seven full-page illustrations by Charles Copeland and William Hamilton Gibson, and numerous smaller pictures and illustrative initials and headpieces. 75 cents.

Wilderness Ways

By WILLIAM J. LONG, author of "Ways of Wood Folk." Illustrated. 75 cents.

Another excellent nature book that is quite up to the high standard of "The Ways of Wood Folk."

The author lets the reader into the hidden life of the wilderness, not from books or hearsay, but from years of personal contact with wild things of every description.

Mother Nature's Children

By ALLEN WALTON GOULD. Fully illustrated. $1.00.

This book aims to help the young to see the spirit rather than the form of Nature. It traces the love and care and mutual dependence of living things from human beings down to the plants. While it is set in an imaginative framework, no facts are stated and no illustration used save on good scientific authority.

BOOKS AT LIBERAL DISCOUNTS. | **When calling please ask for MR. GRANT. Whenever you need a book address Mr. Grant.**

Before buying books write for quotations. An assortment of catalogues and spe ial slips of books at reduced prices sent for 10-cent stamp.

F. E. GRANT, Books.
23 W. 42D ST., - - - - - - NEW YORK.
(*Mention this advertisement and receive a discount.*)

F. W. CHRISTERN
(DYRSEN & PFEIFFER, Successors),
429 5th Ave., bet. 38th and 39th Sts., New York.
Importers of Foreign Books; Agents for the leading Paris Publishers; Tauchnitz's British authors, Teubner's Greek and Latin Classics. Catalogues of stock mailed on demand. New books received from Paris and Leipzig as soon as issued.

ELLIS & ELVEY,
Dealers in Old and Rare Books.
CATALOGUES of CHOICE BOOKS and ILLUMINATED MANUSCRIPTS published periodically.
Rare Early English Literature, Early Printed Books in Black Letter, Ancient Artistic Bookbindings, Rare Prints and Autographs, etc. Only fine specimens are dealt with.
29 NEW BOND STREET, LONDON, ENG.

RARE PRINTS,
XVI. & XVII. Century Armor, Old Delft Ware, etc
Illustrated Catalogues sent free on application.
HENRY T. COATES & CO.,
1222 Chestnut Street, Philadelphia.

A Novel of the American Colony in Paris.

A New Race Diplomatist.

By JENNIE BULLARD WATERBURY. With five Illustrations by Edouard Cucuel. 12mo, cloth, $1.50.

J. B. LIPPINCOTT COMPANY, Publishers,
PHILADELPHIA.

HAVE YOU MET
Monsieur Beaucaire?
A Great Book. **$1.25.**

EX-PRESIDENT

Cleveland

ON THE

Venezuelan Boundary Controversy

A lecture on "The Long-standing Dispute between Great Britain and Venezuela," hitherto unpublished, is printed in full in the

JUNE CENTURY

This is the most important historical statement Mr. Cleveland has yet made; it places the action of our Government in a new light. The papers are cumulative in their interest, giving as they do details as to a long series of diplomatic incidents with which the public are unfamiliar.

Price, 35 cents

TWENTIETH THOUSAND.

HEROD

A Tragedy in Three Acts.
By STEPHEN PHILLIPS,
Author of "Paola and Francesca."
Crown 8vo. Cloth. Price, $1.50.

LONDON TIMES: "Here is a notable work of dramatic imagination; dealing greatly with great passions; multi-colored and exquisitely musical."

POEMS. By Stephen Phillips. $1.50.
PAOLA and FRANCESCA. By Stephen Phillips. $1.25.
MARPESSA. By Stephen Phillips. 50 cents. Leather, 75 cents.

JOHN LANE, 251 Fifth Ave., New York.

TO READ AND TO KEEP.

"A story of the fierce days of 1815, when the Northwest Company, with Indian allies, carried war into the very heart of the vast territory claimed by its rivals, the Hudson's Bay Company. *LORDS OF THE NORTH* is preeminently a novel of uncommonly stirring incident. The characters are distinct and strong. The old priest's death is a scene of great beauty and pathos."

—N. Y. Times Saturday Review.

FOR SALE EVERYWHERE.

NEW AND IMPORTANT WORK.
OUR EMPIRE: PAST and PRESENT.
GREAT BRITAIN IN EUROPE.
By the Right Hon. the EARL OF MEATH, M. H. CORNWALL LEGH, LL.A., and E. JACKSON.
420 pp., crown 8vo, cloth boards, with 15 Full-page Illustrations and Maps, and a Photogravure Portrait of Queen Victoria, from the Painting by Prof. von Angeli. Price 7s. 6d.
HARRISON & SONS,
59 Pall Mall, London, S. W., England.

Pocket Size Standard Novels.

Thackeray's Works and **Dickens'** and **Scott's** Novels. Thin paper. Large type, easy to read. Size 4¼ by 6¼ inches and only ⅛ inch thick. Bound in cloth, $1.00 each. Sent prepaid on receipt of price. Prospectus free on request.
THOS. NELSON & SONS,
37 East 18th St., New York.

WANTED.—A COPY OF THE MEMOIRS (Diary) of John Quincy Adams. 12 vols., J. B. Lippincott & Co. Address
PORTLAND ACADEMY, Portland, Oregon.

fighting, when he was shot through the right knee by the same sharp-shooter who had wounded him in the first instance. This completely disabled him. What followed had better be told in his own words, as it offers a characteristic example of his pluck and combative instincts.

"When I received the wound on my right knee, I began at once to try to stop the flow of blood. I used for the purpose one of the half-dozen silk handkerchiefs with which I had provided myself; but I was so tired and weak from loss of blood that I was some time doing the trick. In the meantime my sharp-shooter friend, about thirty-five yards away, continued to shoot at me, at the same time addressing me in very forcible but uncomplimentary language At the fifth shot, I think it was, he hit me again, taking off the end of one of my toes, and tearing off the sole of my shoe, and wrenching my ankle dreadfully. I thought the bullet had gone through my ankle, the pain was so intense. For some reason, I don't know why, this shot made me unreasonably angry, and, rolling over in the sand so as to face my antagonist, I addressed a few brief remarks to him; and then, just as some one handed him a freshly loaded musket, I fired, aiming at his breast. I knew all the time that I should kill him if I shot at him, but had not intended to do so until he shot me in the toe. My bullet went a little high, striking the poor chap in the throat and passing out at the back of his neck. He staggered around, after dropping his gun, and finally pitched over the parapet and rolled down near me, where he lay dead."

Of the terrible sufferings the author endured before he was rescued from his perilous position, he gives a graphic account. When he was removed to the hospital at Norfolk, the surgeons decided that it would be necessary to amputate both of his legs. They made preparations accordingly. Young Evans was equally determined that he had use for these members, and would not part with them. The better to preserve them, he placed a loaded revolver under his pillow, and when the surgeon told him what it was proposed to do, he produced the weapon and delivered himself of the following ultimatum: "I told him [the surgeon] that there were six loads in it, and if he or any one else entered my door with anything that looked like a case of instruments, I meant to begin shooting, and that I would kill six before they cut my legs off." This chilled the enthusiasm of the doctors, and young Evans saved his legs, but at a price in the way of suffering which few men would have given for the privilege. No one can read the account of the author's share in the attack on Fort Fisher, and of the subsequent agony he endured from his wounds, without feeling that he is brought in actual contact with one of those remarkable characters familiar in fiction, but rare in real life.

At the close of the civil war the author of 'A Sailor's Log' passed through the conventional routine of naval life—watch or executive officer of various ships, shore duty, and then in intermittent command until he attained to his present rank. His narrative covers all of these phases, each diversified by incidents of varying interest. The monotony was interrupted on three or four different occasions—in the disturbance with Chili, in which he acted a conspicuous part, and in the subsequent war with Spain. Had he been attacked by the Chilian fleet, as at one time threatened, the gunboat *Yorktown*, of which he was in command, would have been its sole opponent. In his long record of worthy service, no page is brighter than that which describes his conduct of affairs at Valparaiso. The mere narration of what he did displays, one might almost say in spite of himself, a cool firmness and a resourceful tact which were of priceless value. The story is rather harmed than helped by the introduction of sanguinary reflections, and of such expressions as the grim determination to "blow her bottom out" if a Chilean torpedo-boat happened to touch the *Yorktown*, etc. In such an encounter, the torpedo-boat, and not the *Yorktown*, would have been seriously damaged. There is hardly a naval officer who would have been less willing than was Admiral Evans to engage the nine Chilian vessels in that harbor had the need arisen, but there are very few who would have acted as wisely as he, and thus have averted an international catastrophe. This he did without yielding the point of honor.

To discuss the events off Santiago would reopen a regrettable controversy, temporarily if not permanently hushed, for which there is, moreover, no space at our command. Nevertheless, we may express surprise that no explanation is given of the failure of the *Iowa*, our largest, newest, and fleetest battle-ship, barely a year in commission, to take and keep the place in the fight of July 3 to which her qualities entitled her. It appears from 'A Sailor's Log' that the Spanish ships passed the *Iowa* in turn, and that she followed in their rear, while the *Brooklyn* and *Oregon* were able to keep up the chase to the finish. That the *Brooklyn* should go faster was natural, but that the *Iowa* fell astern of the *Oregon* was a surprise to all who knew the ship and her captain's reputation.

As a record of facts, 'A Sailor's Log' should be used after comparison with authorities, but as a sea yarn it is entitled to high rank for its humor, its wealth of anecdote, its variety of scene, its simple and agreeable style. In this aspect it has no superior, and few equals. More particularly to those who are interested in all that pertains to a ship-of-war, in calm and in stress, in peace manœuvres, amid a shower of exploding shells, or when the 13-inch turrets of a battle-ship, each weighing 500 tons, break loose in a gale of wind and are free to do as they choose, 'A Sailor's Log' supplies ample entertainment in graphic narration.

Caesars Rheinfestung. Von H. Nissen und C. Koenen. Bonn: Sonderabdruck aus *Bonner Jahrbücher*, Heft 104.

The question where Cæsar bridged the Rhine when he made his two expeditions into Germany, in 55 and 53 B. C., is of more than local significance. From the narrative in the fourth and sixth books of the 'Gallic War' it is evident that the further end of both bridges touched the country of the Ubii, while the west end started from the territory belonging to the Treveri; and Cæsar expressly states that the second bridge was only a short distance above the first. If the location of the two tribes mentioned can be fixed for the time of the Gallic Conquest, the region in which the bridges must have been built can be at least approximately defined; conversely, if the place where the bridges were can be determined, there is a starting-point for the settlement of several important problems in the political geography of ancient Germany.

Up to the present time opinion in regard to the location of the bridges has been hopelessly divided. Not less than twenty places have been proposed, from Xanten, below Düsseldorf, as far south as Mayence, a distance of about two hundred miles. Philologists, historians, engineers, and military men have attacked the problem from different points of view; and although, from the inadequacy of the data, a final solution has not seemed possible, the choice of location has gradually been restricted. The latest scholar to examine the question from all sides before the publication of the present monograph, Mr. Rice Holmes, gave it as his opinion "that both the first and the second bridge were built between Andernach and Coblenz" ('Cæsar's Conquest of Gaul,' p. 697), a distance of barely twelve miles. Mr. Holmes's incisive argument needed only the evidence of material facts to become convincing; and such evidence the monograph before us aims to present.

Below Urmitz, which lies about midway between Andernach and Coblenz, the left bank of the Rhine for some distance from the present bed is covered with several layers of volcanic sand and small bits of pumice-stone, thrown out in a prehistoric but not remote period from one of the craters about the Laacher See. The depth of the deposit, from the thin stratum of surface soil down to the clay underneath, varies from eight to seventeen feet, and the strata are so clearly defined that, in excavating, it is easy to see where they have been disturbed. In a photograph showing a transverse section of a trench that has been filled in, the contrast between the undisturbed whitish material on either side and the earth in the trench, mixed with surface soil, can be as plainly seen as in a drawing. For several decades the pumice has been used for making "Engers stone"; and as the demand has increased, the pits for extracting it have become correspondingly extensive, and the volcanic deposit for considerable distances has been cleared away to the depth of twelve feet or more.

Visiting the pumice-pits in February, 1898, Constantine Koenen saw indisputable traces of earthworks, the significance of which he was not slow to recognize. He interested various persons in the discovery, among whom was Professor Nissen of the University of Bonn. Funds were provided, and it was made possible to determine the character and extent of the earthworks by means of excavations, which were carried on from October, 1898, to March, 1899. The results are incorporated in this joint paper, the historical and critical part of which is contributed by Nissen, while Koenen presents a concise account of the excavations, well illustrated by views and drawings.

The earthworks formed the periphery of an extensive enclosure, in shape roughly resembling a semicircle with its diameter, measuring about 4,300 Roman feet (1,274.50 metres), resting upon the Rhine. They consisted of three parts: an outer trench, having an average width, at the top, of twenty-five Roman feet, a depth of five feet; an inner trench, thirty Roman feet wide and six feet deep; and a rampart made of the earth thrown out of the trenches, which, as shown by a calculation based upon the cubic contents of the material to be disposed of, was probably twenty Roman feet wide at the bottom, twelve at the top, and twelve feet high. The outer edge of the rampart rested against heavy palisades, planted five

feet in the ground; the trench in which they were set, and in which charred remains of timber were found, was two Roman feet wide. As the top of the palisades where the battlements were must have been at least seven feet above the top of the rampart, we are perhaps safe in assuming, for the longer timbers, a length of twenty-five feet. Between the palisades and the inner trench was an open space twenty Roman feet wide; a similar space, twice as wide, separated the inner from the outer trench. At the gate openings, of which a number, large and small, were discovered, the system of defences was arranged with a high degree of military skill in order to protect the approaches.

From the standard of measurement it is evident that we must recognize in these fortifications the work of a Roman army; but fortunately data are at hand for a somewhat more precise determination of chronological limits. At the east end are traces of a smaller and later fortified enclosure, rectangular in form, the sides of which intercept the earlier line of works at two points; this, from the character of the remains associated with it, is identified (with much probability) as one of the line of forts constructed by Drusus along the left bank of the Rhine in 12 B. C. It is interesting to note that the earlier works extended across a portion of a cemetery, in the graves of which the excavators found bronze ornaments and pottery belonging to the period just preceding the Gallic Conquest, but nothing that could be assigned to a later time.

What was the purpose of the large enclosure? Nissen and Koenen answer that it was the fortified camp built by Cæsar in 53 B. C. to defend the second bridge, and that it was probably occupied by troops so long as he remained in Gaul. It certainly tallies well with this explanation that remains of a series of piles were found in 1896 in the bed of the Rhine at a point corresponding with the probable direction of the main street running across the camp to the bank, and that other piles have been met with in dredging the river at the upper end of the small island of Thurmer Werth, about three-quarters of a mile below, which may be assigned to the first bridge. The argument based upon the discovery of piles, however, is not so conclusive as it might at first appear to be; for in the Middle Ages rows of piles were driven in the bed of the Rhine in order to make it possible to exact tolls from passing craft.

The limitations of space do not permit us to examine all the considerations adduced by the authors in favor of their plausible and interesting hypothesis. The balance of probability is on their side; yet there are two difficulties which need to be cleared up before a complete verdict can be rendered. The shape of the fortification is strikingly unlike the normal type of fortified camp used by Cæsar in Gaul, as illustrated, for example, by that on the Aisne, and the larger camp at Gergovia, discovered in the course of the excavations undertaken by Napoleon III.; Cæsar was no slave to rules, yet it is not clear why such a departure should have been made in this case. Finally, if Cæsar's bridge stood at the point indicated, some traces of it may still await discovery on the other side of the river. When these are brought to light, the most important gap in the evidence will have been filled.

Five Years of my Life. 1894-1899. By Alfred Dreyfus. McClure, Phillips & Co. 1901.

A man may deserve sympathy and respect no less by enduring than by doing; and a confessor who survives through superior physical and mental strength may be as honorable as a martyr whose body succumbs while his spirit triumphs. Though the notoriety of his trial exhausted the possibilities of comment and of emotion in 1899, M. Dreyfus's efforts toward vindication are righteous, and anything which can keep so phenomenal a case fresh in memory may be regarded as a public service.

The main circumstances of his arrest and degradation in 1894, and the outline of his experiences on Devil's Isle, are familiar; the details are now filled in at first hand. We are told how, on arriving there in April, 1895, he was supplied with "some coffee berries in filthy condition," but with "no means of roasting" them; how the next day he received some raw meat, which he managed to broil on "stray scraps of iron" of his own collecting, after working two hours to gather wood for fuel; how in May his feet were sunburned "because I went out without my shoes for a few seconds"; how he lived on letters, which took an average of three months to reach him; how he learned that his own letters were likewise delayed or confiscated; how he had to remain shut up in his hut through part of June, because convicts were at work on the guards' quarters, and how he tried to relieve the monotony by giving three or four hours a day to English. "But the rest of the time my thoughts are always harking back to the horrible tragedy." In July, "I am followed everywhere; all I do is a matter of suspicion and rebuke. When I walk, they say I am tiring out the guard who must accompany me; and if I say that I will not leave my hut, they threaten to punish me." In August he omitted writing for three weeks: "What is the use of it?" On November 4 the temperature was 113 degrees. On the 15th he thought his strength was "declining daily" and near its limit; a fortnight later, "My reason will end by sinking under the strain of this inconceivable treatment." Yet there was to be nearly four years more of this, and worse.

At the end of 1895, "My nerves trouble me so that I am afraid to lie down. This silence of the tomb, with no news of my dear ones for three months, with nothing to read, crushes and overwhelms me." A month later some books arrived, but he could "no longer read for any length of time." Another month, and "the guards are forbidden to answer" his few questions. Later he writes, "I asked long ago for some manual labor, no matter of what sort, to occupy myself a little. They have not even answered me." On September 6, 1896, he was put in irons, as "a measure of precaution." Facing p. 220 is a plan of his hut and his bed, with the rings for his feet, the bar to which they were attached, the staples, knob, and padlock to keep them fast. This nightly discipline, "without a minute's exercise by day," was continued for over two months. Soon after it began, his diary was abandoned, and his papers were seized.

M. Dreyfus is neither a rhetorician nor a stoic; his book is mainly a simple record of natural feeling under the pressure of hideous injustice and cruelty. But from his worst agonies he evolved what may stand among the noblest protests against suicide, a passage wherein Cleanthes and Epictetus might recognize their own spirit at its height, with an advance on their doctrine of the open door. Let him introduce it in his own way:

"On one of these long nights of torture, when riveted to my bed, with sleep far from my eyes, I sought my guiding star, my guide in moments of supreme resolve; I saw all at once the light before me illuminating for me my duty. 'To-day less than ever have you the right to desert your post; less than ever have you the right to shorten even by a single hour your wretched life. Whatever the torments they inflict on you, you must march forward until they throw you into your grave; you must stand up before your executioners so long as you have a shadow of strength, a living wreck to be kept before their eyes by the unassailable sovereignty of the soul which they cannot reach.' "

After the "boucles," other woes might seem insignificant. "I had to protect my table [from ants] by placing the legs in old tin cans filled with petroleum." Insects devoured his books, which were mostly of history and literature, with Montaigne and, "best of all," Shakspere. "Not possessing the necessary books in mathematics, I made up for myself the elements of the integral and differential calculus." To do this he "compelled" his thoughts, "for moments, always too short," away from personal topics. Early in 1897 his wife's letters began to be withheld, or to reach him only in copies. In March he wrote to her, in another moment of exaltation, "This life is nothing. A pure soul that has a sacred duty to fulfil must rise above suffering." In August he was moved to new quarters: here "the attitude of my jailers toward me varied with the changes of the situation in France—a situation of which I was in complete ignorance." Traps were laid—to catch a confession, if that might be. "In my nights of nervous irritation, when I was a prey to nightmare, the man on guard-duty would draw near to my bed, trying to catch the words that escaped from my lips." The commandant, Deniel, was not above personal spying: to this man the prisoner ascribes much of his miseries. "No torture more nerve-racking and more insulting . . . to have two eyes full of enmity levelled at you day and night, . . . and never to be able to escape or defy them!"

But this was not to last for ever. In January, 1898, the Government had thirteen guards to watch its helpless captive, and a Hotchkiss gun to keep off possible rescuers. In November these rigors had some mitigation, and in June, 1899, he was sent back to France.

There is no violation of privacy here. Dishonor and fame were thrust upon an innocent man, and every item of the oppressions he endured became the world's concern. Nor will his narrative lessen the feelings of civilized people toward the heroic victim and his faithful wife—nor, in another way, toward his persecutors. His comment on his reception at home is at one with the common sense of Europe and America: "Where I had expected to find men united in common love of truth and justice, desirous to make amends for a frightful judicial error, I found only anxious faces, petty precautions, a wild disembarkation on a stormy sea in the middle of the night, with physical sufferings added to the trouble of my mind." He closes with a sentence

from the card put forth on the day of his liberation: "My heart will never be satisfied while there is a single Frenchman who imputes to me the abominable crime which another committed." In this he is apparently doomed to disappointment. But outside France, and with the best people in it, his vindication is not a thing yet to be accomplished.

Stories of the High Priests of Memphis: The Sethon of Herodotus and the Demotic Tales of Khamuas. By F. Ll. Griffith, M. A. Oxford: Clarendon Press; New York: Henry Frowde.

Every one is more or less familiar with the Oriental tales of magic which invaded Europe in the Middle Ages and colored mediæval romance. In the stories of Charlemagne and his paladins occur magical incidents which remind the reader at once of the Arabian Nights, with such common figures as the malevolent African enchanter, whom we encounter, for instance, in the story of Aladdin. But this African enchanter, it seems, as well as these tales of magic in general, while they come to Europe from the East, are older than the Arabian Nights. The well-known Egyptian scholar, F. Ll. Griffith, M.A., has just published two 'Stories of the High Priests of Memphis,' from demotic texts. The hero of them is a certain Khamuas, a high priest, son of the famous Rameses II., who flourished about 1250 B. C. The stories themselves, however, belong to the Ptolemaic and early Roman period, the second and later dating from the latter half of the first century A. D. It is this story, now published for the first time, under the title of "The Tale of Khamuas and his Son Si-osiri," which introduces the African or Ethiopian magician. It involves also a contest between magicians which reminds the reader strikingly of the strife of Jannes and Jambres with Moses, referred to in the New Testament (2 Timothy, iii., 8), and clearly derived from Egyptian-Jewish sources. The other story, here called "The Tale of Khamuas and Neneferkaptah," had been already published by Brugsch and others, and in English by Mr. Griffith himself in the Egyptian section of 'The World's Best Literature' (New York, 1898). An English scholar, Thomas Young, was among the first workers in the interpretation of demotic texts (1820-1830), but from his time to the present no work had been done in that field by Englishmen, and, for that matter, but little by Egyptian scholars in general. Brugsch did, for a time, apply himself to demotic, in connection with his dictionary of hieroglyphic and demotic, and a few scholars in France and Germany have in later years given it some attention; but on the whole this branch of Egyptian study has been neglected, so that Mr. Griffith's publication will be even more welcome to the student of Egyptian than to the student of folklore.

That the Egyptians early developed a literature of stories, we know from the hieratic texts of the Middle and New Kingdoms, antedating 1200 B. C. For the succeeding centuries, until 150 B. C., we have no stories from Egyptian texts, but both the Bible and Herodotus evidently drew upon Egyptian tales of that period. After 150 B. C. there seems to have been a considerable demotic story literature, the heroes of which were men of the past, like Setne or Sethon Khamuas, indicating a reworking of ancient material. Magic plays an important part in these stories, as it had done also in those of the preceding period, drawn upon by Herodotus and the Bible. The two stories now published by Mr. Griffith are specimens of this literature. It is to be hoped that more of it may soon be made accessible to the general reader.

The second part of the book, "Philological," which covers 141 pages out of a total of 207, contains a transliteration of both stories, with word-for-word translation and commentary, for the student of demotic. Through the enlightened beneficence of the authorities of the Oxford University Press, there is published also in connection with this volume a folio of "facsimiles of the Demotic Text of the Second Tale," ten plates in all, five photogravure reproductions of the manuscripts, and five clear hand copies. The text of the first tale had already been published by Mariette (Brugsch's copy), Krall, Revillout, and Hess.

The Norwegian North Polar Expedition, 1893-96: Scientific Results. Edited by Fridtjof Nansen. Vol. II. New York: Longmans, Green & Co. 1901. Pp. ix, 422, 19 charts and plates.

The second volume of Nansen's "Scientific Results" is devoted to astronomical, magnetic, and pendulum observations. The testimony of the experts who have worked up the notes to the industry and ability displayed by the explorers is unanimous; and, with due allowance for inevitable defects arising from the conditions of the Arctic region and the often literal struggle for life, the results are most satisfactory. Except the observations made on the sledge journey, most of those which formed the basis for these discussions were made by Capt. Sigurd Scott-Hansen, to whom Nansen accords his hearty appreciation. The astronomical computations are due to Prof. Geelmuyden, who had assisted the expedition in its outfitting and by useful advice. The two points in his portion of the work which will be of interest to the average reader are the highest northing attained respectively by Nansen on his sledge journey and by the *Fram*. The ship in her drift reached a latitude of 85° 55′ 50″, in east longitude from Greenwich 66° 8′, on November 15, 1895. This was her farthest north, and practically 304 geographical miles from the Pole. At their farthest north, April 7, 1895, Nansen and Johansen observed the latitude which reduces to 86° 12.3′; but the computer, on account of the meteorological conditions, regards this as too high, and plats the culmination of the sledge journey northward in latitude 86° 4′, a point about eight miles farther north than that reached by the *Fram* during her drift.

The magnetic observations were worked up by Aksel Steen of the Meteorological Institute of Christiania, and, presenting no specially remarkable features, are interesting chiefly to specialists in this department. The pendulum observations were taken by the method of coincidences, with apparatus of the Von Sterneck type, of which the constants were determined at Vienna. No land was found in the Arctic basin, but Scott-Hansen thought that the steadiness of the ship in the grip of the pack-ice warranted attempts to observe on board after every one had retired except the observer. Though some doubt was felt as to the value of observations taken under such abnormal conditions, they were persevered in, and, according to Nansen, their discussion by Prof. O. E. Schiötz now appears to yield some of the most important physical results of the expedition. The latter states (p. 63) that

"Nansen's expedition has furnished the first answer to the question as to what are the facts with regard to the force of gravity over great ocean depths. The observations show that the gravity may be regarded as normal over the polar basin; and, as it is not probable that this is a peculiarity of the Polar Sea, we are led to the assumption that the force of gravity is normal all over the great oceans. The increased attraction observed on oceanic islands must therefore only be due to the local attraction of the heaped-up masses at the bottom of the ocean that form the islands."

From these considerations Schiötz is led to some conclusions in regard to the physics of the earth's crust which will be of much interest to physicists, but which cannot be detailed here.

The work is issued in the attractive form noted in the case of the previous volume, and is a storehouse of facts of real importance for the students of gravity and magnetism.

Two Lectures Introductory to the Study of Poetry. By the Rev. H. C. Beeching, M.A. Cambridge: The University Press; New York: The Macmillan Co. 1901.

Although written for the help of young students of poetry, Mr. Beeching's two lectures are not conventionally academic. Within the limits of their length, the analysis of the theme is both close and fresh. As must always be the case in the honest analysis of a question so near the springs of intellectual life as that of the nature of poetry, much food is furnished for the thought of the maturer scholar. For such a reader, moreover, the attraction of the thin volume is enhanced by many bits of the excellent Shaksperian criticism by which Mr. Beeching has already become known.

The first lecture, that on "Passion and Imagination in Poetry," proceeds from the Miltonic text, that poetry is "simple, sensuous, and passionate." It is a little strange that so good a scholar as Mr. Beeching appears to be, should make the classic slip of implying that Milton asserted absolutely that poetry should possess those three qualities. As a matter of fact, the poet merely said that in making up the order of studies for the young, poetry should precede logic and rhetoric, being "less subtle and fine, but more simple, sensuous, and passionate." The discrepancy is not great, but too frequent use of such tags by many critics betrays habits of second-hand quotation and avoidance of verification which are insidious and bad.

The discussion of the function of the imagination in writing and in reading poetry is excellent. Without being bald, it is plain and clear. The idealizing work of the imagination, its relation to poetic sympathy, its shaping and its kindling power are treated with insight and some gift of exposition. There is, however, room for objection to Mr. Beeching's treatment of fancy and imagination. He holds that Wordsworth's notion that fancy sees arbitrary or accidental resemblance where imagination finds vital unity or connection, has been vicious in its results. He says truly enough that Coleridge merely distinguished the one from the other as the adorning and embellishing

gift of the poet from his constructive power, from the interpretative or visionary insight of the true "maker." Mr. Beeching takes well-grounded exception to Ruskin's Wordsworthian discrimination of fancy from imagination in his well-known comparison of the flower passages in 'Lycidas' and "A Winter's Tale." But, after making due allowance for the over- and mis-use of these terms, we still think they are so useful in the criticism of the conceited poetry of the seventeenth century and its modern analogues, that we cannot agree with Mr. Beeching that the contrast is one "which critics might now be content to let die."

The first lecture concludes with some admirable paragraphs in which the characters of Macbeth and Richard II. are anatomized —the one as a type of the man with a true poetic and (in the strict sense) idealizing imagination; the other as a minor poet and sentimentalist. The second lecture, upon "Expression in Poetry," will be equally useful, no doubt, but it is less pregnant. Despite the efforts of scholars of all sorts, from Guest and Schipper to Sidney Lanier and Robert Bridges, the final rationale of English verse is still to seek. Even if it were desirable, it is now hardly possible to systematize all the wandering airs and fleeting graces of English poetry. Mr. Beeching's treatment of these is as satisfactory as such discussions usually are, and his talk of form, melody, and the poetic phrase is of a kind to make his reader more keenly alive to such actual beauties in the poetry which he comes to know.

A Study of Christian Missions. By William Newton Clarke, D.D. Charles Scribner's Sons. 1900.

As proceeding from one of the most intelligent and trusted religious teachers in our country, these lectures have an attraction which heightens their intrinsic interest. The motive of missionary labor is represented as a desire to give the best of religion and life to those who are in need of them. The contention that any other motive than the traditional one—to save men from eternal hell—would "cut the nerve of missions," is discredited, on the ground that the dreadful fate of all unbelievers is no longer certain, and because we know that men prove good missionaries without this motive. Another departure from traditional lines is the view that planting and nourishing a Christian life, and not heralding the doom of the heathen, is the missionary's proper work. It is further argued that Christian natives, and not foreigners, are our best reliance. Bushnell's idea of Christian nurture as opposed to spasmodic conversion is steadily upheld. The slight effect of missionary effort on the mass of Roman Catholics, Mohammedans, and Jews is frankly confessed. The denominational division is deprecated as unsatisfactory, but is held to be indispensable for the present. It is admitted that there is "a crisis in missions" already upon us, and that this is much wider than the Chinese problem, the treatment of which is extremely casual.

Dr. Clarke resents the charge of missionary responsibility for the outbreak in China, "when the exasperating aggressions of the Western Powers are known of all men." He has but a poor opinion of Kaiser Wilhelm's policy of "No quarter in Christ's name," and does not incline to the persuasion that civilization must be the vanguard of missionary enterprise. "Just now," he says, "civilization does not seem to be exhibiting itself most favorably as the ally of Christianity." "In much of the current talk about its introduction to new peoples through war and commerce there is a profound ignorance of Christianity and an effrontery that is almost incredible." "It needs no proof that the spirit of war is most intensely hostile to the spirit of missions." "All race antagonisms work in the wrong direction." These sentiments are in happy contrast with the "blood and iron" Christianity of many pious enthusiasts of our time. Dr. Clarke's construction of the ethnic religions, however, as the outgrowth of man's natural religiousness, yet now and henceforth encumbrances which must be destroyed, is hardly to be distinguished from that attitude of superiority and contempt which he eloquently deprecates.

A Notable New Novel.

Gissing's Our Friend the Charlatan.

386 pp., 12mo, $1.50.

Such of Mr. Gissing's many friends as have seen the manuscript of this new novel find it the strong work they have been expecting, because of his evident ability, steady improvement, and constant respect for his art. The motive is the one now popular of the politician and the woman, but it is treated in ways that are the author's own.

Comprehensive and Authoritative

CHINA and the ALLIES

A Most Important Work

By A. HENRY SAVAGE LANDOR

Famous as a traveller and the author of In the Forbidden Land

WITH 269 ILLUSTRATIONS

5 full-page Chinese prints, reproduced in their original colors and illustrating phases of the uprising, including various forms of torture devised by the Chinese for the punishment of foreigners.

16 full pages in tints, illustrating important scenes in the war.

48 full pages in black and white, from photographs and drawings by the author.

200 text illustrations, mostly from photographs taken by the author, and a few from drawings.

In two large octavo volumes, each 6 x 9 inches in size, with a total of 141 chapters and 876 pages, $7.50 net.

AN impartial and masterly review of the recent military operations in China and the events preceding them. Mr. Landor was in Tientsin when it was taken, entered Pekin with the relieving forces, and was the first European to enter the Forbidden City as a guest by the side of the Russian General.

Holding no official position, and bound by no official etiquette, he was perhaps the only eye-witness at liberty to report the whole of what he saw. Mr. Landor's knowledge of the German, French, Italian, Chinese, and Japanese languages proved of the greatest value in enabling him to obtain information at first hand.

Affords a comprehensive view of the whole Chinese difficulty, tracing the anti-foreign movement to its original sources, and following the progress of the allies to their settlement in Pekin pending the diplomatic finale still in abeyance.

Shows the development and the true nature of the Boxer movement by translations of the most interesting Boxer circulars and posters, as well as by the official records of the allied powers.

Explains the use of hypnotism by Buddhist priests for the purpose of fanning into fury the rage of the people against the foreigners.

Compares the allied forces in action and inaction in vigorous unsparing phrase, presenting word pictures whose impartiality and truth are self-evident.

Describes the American soldier in camp and in action in terms that will please every patriotic reader, with details of engagements in which he bore himself with conspicuous bravery.

Gives a Diary of the Siege of Pekin with a wealth of incident and picturesque description that floods the scene with new light.

Criticises Sir Claude Macdonald's diplomacy and General Chaffee's military tactics.

Discusses looting impartially, and picturesquely describes the effect of greed upon the soldiers of different nationalities, including our own.

Throws a new and impartial light upon the much vexed missionary question, and shows that Chinese hatred of foreigners, contrary to recent statements, embraces Americans as well as others.

Gives a vigorous account of Bishop Favier's extraordinary defence of the Pao-tang Cathedral.

FIRST YEAR LATIN.

By WILLIAM C. COLLAR, Head-Master of Roxbury Latin School, and M. GRANT DANIELL, recently Principal of Chauncy-Hall School, Boston.

311 pages. Illustrated. For introduction, $1.00.

This book has been prepared in response to a widespread demand for a shorter and easier elementary Latin book than those now in use. The authors have succeeded admirably in meeting these two requirements without abating one jot of thoroughness. The book is intended to cover the work of an entire year in an average class of beginners. There are many schools, however, in which this work may be done in much less than a year.

There are thirteen pages of essentials of grammar for reference, applicable to English and Latin alike, followed by seventy-five lessons, each comprehended within opposite pages, and ending with selections for reading.

To accompany "First Year Latin" a Teachers' Manual has been published, containing eight pages of general suggestions, followed by notes on each lesson for the guidance and help of teachers.

The Macmillan Company Begs to Announce

THE ONE HUNDRED AND FORTIETH THOUSAND OF

Mr. Winston Churchill's New Novel

THE CRISIS

Was published two weeks ago to-day and is already in its 140th thousand. We think the American public is to be congratulated upon the genuine success of this book—a success due to merit alone.

The press notices up to date have been more than favorable. Praises of the book have reached us from Boston to San Francisco.

Boston	Philadelphia	Chicago
Springfield	Washington	Louisville
Hartford	Buffalo	New Orleans
Providence	Cleveland	St. Louis
New York	Toledo	Denver
Baltimore	Indianapolis	San Francisco

We quote *briefly* from a few of these:

"Mr. Churchill is a strong man. *The Crisis* has placed him among the leaders of the sentiment of our age. Long after this book has been read, closed and put aside, the people who lived, loved and suffered on its pages will be a part of your life. You will meet them again and again, masquerading under other names, introduced by lesser men. Your children and grandchildren will know them, and I can see them now, beckoning with one hand to the past, pointing with the other hand steadily to the future."—*Book News.*

"*The Crisis* is an American story to the cover; bringing out the Colonial types modified by two centuries of life in the New World, and confronting one another at last in the very heart of the continent. It is American also in its just and true interpretation of characteristic American simplicity, of manner and habit, combined with high ideals of public service and great gifts of mind and heart."—*Hamilton W. Mabie in New York Times.*

"Mr. Churchill's latest achievement does not lie in his philosophical interpretation of events, nor in his skillful handling of divers characters or his use of 'local color.' It is in the fact that his art has been so perfect that the work has made these things of secondary importance, and *The Crisis* is a complete, well-rounded whole—a satisfying romance of the most important period in the history of the United States."—*Boston Transcript.*

Above all, "The Crisis" is a book every American should know, for it teaches him anew to revere the memory of the men to whom this nation owes its continued existence, to bow in gratitude to even the least of them who struggled on the hustings and in daily life, or later shouldered a musket that this nation, under God, should have a new birth of freedom, and that government of the people, by the people, for the people, should not perish from the earth.—*New York Mail and Express.*

The book has eight charming Illustrations by HOWARD CHANDLER CHRISTY.

In size and style is uniform with "Richard Carvel," being a 12mo, cloth, gilt top. Price $1.50

The CRISIS

The Nation.

NEW YORK, THURSDAY, JUNE 6, 1901.

The Week.

Mr. W. B. Hornblower's remark that the Supreme Court decision at least removes all doubt of our constitutional power to alienate the Philippines, calls attention to an aspect of the matter of which we may hear a great deal more. All through Justice White's opinion in the Downes case runs the fear, half conscious and half expressed, lest the islands should become permanently a white elephant on our hands. Why, he said, if they were really incorporated in the United States by the mere ratification of the Treaty of Paris, then we should have to regard them as "indissolubly made a part of our common country," we could not "sell them subject to a condition," and should be powerless to allow their inhabitants to "establish a government of their own." A greater misfortune than thus to disable ourselves from getting rid of the Philippines, it is evident that Justice White could not imagine; and the prevailing opinion of the Court agrees with the contention that we can make the Filipinos independent as soon as Congress comes to see the wisdom of doing so. This is something very different from the Jingo howl that the islands are ours, and cannot be alienated any more than Oklahoma can be.

The Cuban Constitutional Convention, by a majority of one, adopted last week the Platt amendment, in the form of an appendix. To this is attached a second appendix containing Secretary Root's explanations of Platt, and a third containing the Convention's interpretation of Root; also a letter from Gen. Wood and the Convention's understanding of it. Appended to the whole is a promise that the republic of Cuba will propose a treaty of reciprocity with the United States. This series of appendices has no legal effect or binding force except so far as the Platt amendment itself is concerned. All the explanations and interpretations and mutual understandings are void as to the United States, because they are not given by competent authority. They do not bind anybody except the present Administration, and perhaps not even that. The Platt amendment says that the United States may intervene in Cuba for the "maintenance of a government adequate for the protection of life, property, and individual liberty." Somebody must interpret this clause when the exigency arises and every time it arises. The interpretations of Secretary Root, given at a time when no exigency had arisen, will be of no value to his successor in office, even if we suppose that future Secretaries of War will have a preponderant influence in deciding the question.

Granted that all the explanations attached by the Cubans to the Platt amendment are superfluous, nugatory, and void, they do not commit us to anything. We are not bound to recognize anything except the fact that the amendment is accepted. The explanation may be embarrassing to Secretary Root. Embarrassment may arise from the fact that he was authorized by the President to make the explanations, but cannot proclaim that fact to the world. Under our theory of government, however, all the acts of members of the Cabinet are those of the President, unless disavowed by him. It is not likely that he will disavow Mr. Root's explanations, but it is announced, apparently by authority, that the Cuban form of acceptance of the Platt amendment will not be accepted by us, and that our forces will not be withdrawn. The whole subject, we are told, will be referred to Congress, and it is given out that Congress will not be called together before its regular session begins in December. Then we shall have—what? A public debate on the question whether a ratification of the Platt amendment by Cuba, with her understanding of what it means, is sufficient or not. This will involve a discussion of what Secretary Root said, and whether he was authorized by the President to say what he said. Of course, the Democrats will go largely into that question. Whether this is likely to add to the reputation of either the President or the Secretary, they must judge for themselves.

Bad management is written all over our latest Cuban misunderstanding and deadlock. We say this on the supposition that the Administration was not really desirous of provoking a quarrel, and that it honestly hoped to come to an amicable agreement with the Cuban Convention. If so, it certainly has been most maladroit. The Cubans may justly complain, as they do, not only that their sensibilities were disregarded, but that they were left absolutely in the dark. Remember that it was fully a fortnight ago that the form in which the Cubans proposed to accept the Platt amendment was made public. Since then not a hint has been given them that this would not be acceptable to the Washington authorities. Secretary Root said not a word. Gen. Wood, who was in constant communication with the delegates, and who had before imparted to them instructions from Mr. Root, gave no sign. The delegates were allowed to go ahead in ignorance and complete their work, only to have it brusquely thrown back in their faces. Whatever else this may argue, it does not argue tact or skill on the part of the Administration.

"The American people cherish good will toward all other Powers, and value a like good will in return. But we perfectly comprehend of what vital moment it is that every other Power be impressed at all times with a wholesome dread of having the United States for an enemy." These are the words of Frank W. Hackett, Assistant Secretary of the Navy, at the opening of the session of the Naval War College in Newport on Monday. The language is certainly less blustering than that of Senator Lodge at the Pan-American Exposition in Buffalo, and it is in better taste at a war college than it would have been at an industrial exhibition. The truth is, however, that this nation does not at present need to be spurred on to the task of inspiring others with a "wholesome dread." There is no immediate danger that the Powers of Europe or of Asia will go out of their way to tread on our toes, or that, in case they do offend us, we shall pocket the insult with contemptible meekness. The danger is that cheap politicians who are ambitious of notoriety will continue to indulge in swaggering talk in order to appeal to the groundlings, and will bring even more men of the "baser sort" to the conviction that fighting for fighting's sake is a good thing. Too many of us are already hankering to "lick" somebody; and our present study should be not to pick quarrels, but to do justice.

The settlement of the contest for the Northern Pacific Railway, or the truce between the contestants—whichever Friday's compromise really is—will be welcomed by every one having the interests of financial stability at heart. Continuance of an open fight between the two rival interests might or might not have resulted in further convulsions of the market, but it certainly would, by all experience, have ultimately led to disastrous "wars" of rates. We say disastrous, because not only shareholders in the companies whose profits are sacrificed, but merchants whose plans are unsettled by sudden and violent changes of transportation cost, would suffer. Apparently the compromise whereby both contending factions are allowed a liberal representation in the Northern Pacific management, leaves the community-of-interest plan at a higher stage of development than at any time heretofore. The Union Pacific management has a powerful voice in the councils of the Southern Pacific on one side of its own territory, and of the Northern

Pacific on the other. This, however, is of course only one stage in complete development of the theory. It is now a question of no little curiosity, what the other railways whose interests touch this "community-of-interest" territory will have to say. Incidentally, and not without bearing on the same question, people will now ask, very pointedly, Who is to pay for these huge competitive purchases of transcontinental railway shares?

We have already had occasion to notice the continued increase in our merchandise export balance—an increase which would apparently be building up a new European credit, even if the balances formerly existing had been exhausted. The statement for April showed an excess of exports nearly a million larger than last year's, notwithstanding the fact that the balance in April, 1900, ran nearly twenty millions over 1899. Classified figures of April's foreign trade have now been published, and throw some interesting light on the steady gain. Exports of manufactured goods, which in the calendar year 1900 ran sixty million dollars over 1899, have thus far this year fallen twenty-three millions below the same months in 1900. Yet the heavy increase in other than manufactured exports has much more than made this decrease good. In April itself, though the shipment of manufactures fell off $5,000,000, that of agricultural products increased $6,100,000, and of forestry products half a million. This is again a striking witness to the varied character of our trade. The increase in total import trade during April was so slight as to attract no notice; but the detailed figures deserve consideration. A year ago such increase as existed was caused almost wholly by raw materials for manufacture. More recently imports of that nature have been decreasing rapidly—a result, we believe, chiefly due to the wool-trade situation. But meantime the April imports scheduled as "articles of voluntary use and luxuries" enlarge by the sum of $2,500,000. There is nothing startling in this showing; it is worth notice only because of the figure cut by such importations in former epochs of prosperity. Oddly enough, almost the whole of April's increased import of "articles of voluntary use" was in diamonds and jewelry.

Massachusetts makes another interesting contribution to the stock of public knowledge regarding municipal lighting plants, in the report from the manager of such a plant in the city of Taunton. It appears that the plant is nearly worn out, that the buildings are in danger of tumbling into a river during any heavy storm, that the machinery is out of date, and that the power needed to run it cannot be secured with the material on hand. In other words, the city must now build practically a new plant, or else go out of the lighting business. What renders this report the more striking is the fact that this Taunton experiment has for years been held up as an example of the successful municipalization of "public utilities"—a plant which not only furnished light for the street lamps and the city offices, but also for the offices and residences of citizens, and at the same time was "operated at a profit." The fact was, that no account had been taken of the steady depreciation of the plant, and of the approaching necessity for large expenditures to keep it running. The Boston *Advertiser* says that there is nothing exceptional in this experience; that other cities which have been showing bookkeeping "profits" have not been keeping their plants "up to date," and are already beginning, or will soon begin, to feel the effects. It maintains that the only way to figure out the municipal lighting plants in Massachusetts as profit-making institutions is by ignoring the item of "depreciation of plant," which no private company would ever think of doing.

A thorough expert examination of the Boston printing plant shows an apparent profit from four years' work of $5,482, but even this small return was secured only by reckoning every conceivable item to the credit of the business, including a hypothetical outlay which would probably have been made had the city's printing been done by private contract. If, however, the same plan be pursued with the debit side of the balance-sheet, there must be allowance for the interest which should be recovered on the initial outlay of $50,000, and which must be paid by the city on its bonds. Reckoning this interest at 4 per cent., the apparent profit turns into a deficit of $8,518 for the four years, an average annual loss of $2,129.50. On the other hand, no perceptible advantage has been gained by the city from its ownership of the business. The prices paid by it to the printing department for work done have been simply those ruling in the market. Moreover, the plant itself has, of course, been deteriorating in value, and is now worth some $18,379 less than the total outlay upon it. In the purchase of it, Boston made a bad bargain, and repairs and renewals have amounted to more than the original cost. The eight-hour day principle was accepted, while private firms were working ten hours, and a Saturday half-holiday was instituted, with the result that the expenditures for wages have been 20 per cent higher than they would have been if made by a private firm. The superintendent admitted that "undue influences" had been brought to bear upon him, and had shaped his action in the employment of men. The expert examiner concluded that "15 or 20 per cent. of the expenses of the department would be saved if the pressure of political influences in favor of applicants for positions were wholly removed, and the superintendent left entirely free to run his department as a private business is carried on."

Walking delegates have had some illuminating news to read in the last few days—that is, if the mind of a walking delegate be really capable of illumination. The tunnel strike in this city has failed completely, for the obvious reason that it was conceived in bad faith and carried out in ignorance. The workmen, as their own leaders frankly admitted, deliberately broke an agreement with their employers for the arbitration of differences; and consequently they have never for a moment deserved or enjoyed the sympathy of the public. Another matter of interest is the statement published on Tuesday from the National Cash Register Company of Dayton, Ohio. The company has cordially recognized the union; has spent thousands of dollars yearly to better the condition of its employees, and has given men ten hours' pay for nine and a half hours' work, and women ten hours' pay for eight hours' work; but has committed the unpardonable sin of discharging three or four men for incompetency, and one for improper conduct and indecent language. As a result, the employees have struck and have lost $120,000 in wages since May 3. The company offered to arbitrate the question of the discharges, but the union refused. Such gross mishandling of the "cause of labor" by the union must inevitably lead people to question both the sanity and the honesty of the organization.

Another negro burned at the stake, this time in Florida, comes as a happy illustration of Judge Brown's inherent justice of the Anglo-Saxon independent of Constitution or law. Not only independent, he may now say, but contemptuous. The man appears to have been a horrible brute, and his crime most atrocious; but laws exist, and a civil society is formed, for the express purpose of meting out punishment to such monsters in an orderly manner. The way of meeting fiendishness with fiendishness is simply a reversion to the Stone Age or even to anterior and more degraded barbarisms, if such there were. This mob ferocity, if unpunished, will again bring the nation into disgrace in the eyes of the world.

A woman has just been appointed a member of the Board of Regents of the State University by the Governor of Wisconsin, under the provisions of a law recently passed by the Legislature. Illinois has recently had a woman trus-

tee of its State University, such a choice having been made in 1896. In the latter case the selection was made in the usual way for an elective office, through the nomination of a woman in the convention of the party which later carried the election. In Illinois, women have the right to vote for university trustees, and this probably inclined the political managers to look with favor upon the idea of giving a place on the ticket to a representative of the sex. In Wisconsin, however, no such consideration entered into the case, and the law authorizing the appointment just made was not passed in "recognition" of any element of voters. Both incidents illustrate the growing tendency towards the abolition of the sex line in matters of education. State universities are open to young women as well as to young men, and it is rightly felt that both sexes should be represented in their government and direction.

The Powers, in dealing with China, having "sized her pile" at 450,000,000 taels (say $315,000,000), have agreed to accept that sum by way of indemnity, and to be content with 4 per cent. interest on it until the principal is paid. It is said that the Emperor William rather plumes himself on this outcome, and considers that Germany has taken a leading position in the affairs of the Celestial Empire. It seems that, in addition to the glory of leading the military forces of the allies in the person of Von Waldersee, she has obtained from England the joint rights of guardianship of the Yangtse valley, and that she has obtained this without offending Russia. Seeing that England had no right of guardianship of the Yangtse valley from anybody competent to give it, but merely an understanding with Russia that the latter should not call it in question, the concession to Germany does not seem to be great, nor does the promise of Russia not to be offended by it seem self-denying. What Germany has gained in the public opinion of Europe by her course in China, we do not know, but on this side of the water she has added nothing to her reputation.

In the French Chamber of Deputies on Monday a member, while discussing the Chinese indemnity question, made some remarks, rather malapropos, on the "yellow peril" that gave distress to many persons in this country and abroad some years ago. The yellow peril was a phrase implying that the Chinese were about to become a great manufacturing people and would be able soon to undersell all others by the cheapness of their wares, due to the low wages prevailing in that country. The yellow peril was a nightmare of brief duration. According to the French Deputy referred to, it has been superseded by the American peril, which is founded upon the opposite theory, that we have become a great manufacturing people and are now underselling Europe by the cheapness of our products, due to or perhaps in spite of the high wages prevailing here. This American peril, said M. des Tournelles, was advancing with methodical rapidity. "The Napoleons of American industry declared openly that their enterprise meant the conquest of Europe and her economic ruin."

M. Delcassé, the Foreign Minister, to whom the question was addressed, confined himself to the Chinese indemnity question strictly. Either the American peril did not concern him, or he attached less importance to it than the Deputy who introduced it into the public debates. There is no doubt, however, that a large part of the European world is thinking the same things that M. des Tournelles said. The subject is under constant discussion in England. It drew out from Lord George Hamilton, the other day, an important statement touching American facilities and skill in bridge-building. Plans for warding off the American peril are in an inchoate state at present. The method most in vogue on the continent of Europe is a proposed Zollverein or joint tariff against American goods. This was broached by an Austrian statesman a year ago, and has been under discussion fitfully in the press since that time. The difficulties which beset it multiply the more it is examined. Shall this tariff be directed against American goods only, or shall it apply to all goods, wherever produced, in which America has a great superiority? Shall it extend to English goods made of American raw materials, as, for example, English tin plate made of American steel? How shall the resulting customs duties be divided among the members of the Zollverein? These and many other puzzling questions present themselves as soon as an attempt is made to draw up a treaty to carry the scheme into effect. In the midst of the parley the London *Times* comes out with a leader saying that England will have nothing to do with the proposed boycott of American goods. She will pursue her time-honored policy of buying in the cheapest market.

At the Socialist Congress in Lyons last week, "Comrade" Millerand's somewhat anomalous position was freely discussed. The more radical Socialists moved to censure the Minister of Commerce for his membership in a bourgeois Ministry, and when the vote was defeated by a large majority, some two hundred of the dissenting delegates withdrew in a body. It was then felt that the Congress had laid itself open to the reproach of supporting the Ministry and sanctioning the acts of M. Millerand's colleagues. So a carefully worded resolution was passed which disavowed Minister Millerand as a representative of the Socialist party, and declared that, in all dealings with the Government, the Socialists would consider only the interests of the proletariat. The situation, from one point of view, is a comic one. The Socialist Minister changes his denomination with amazing facility. When it is a question of censure, Millerand is "camarade" of all good Socialists; when it is a question of political support, no Socialist has so much as a bowing acquaintance with Waldeck-Rousseau's Minister of Commerce. There is a more serious aspect of a situation which shows in little the relation of the Socialists to the Ministerial majority; the Socialist allies of the Government accept favors, but assume no responsibilities. M. Waldeck-Rousseau has given them much already, and promises old-age pensions and compulsory arbitration of strikes. How much more must he promise them to retain their support? That is the problem before the French Premier.

It turns out that Mr. Carnegie's plans had been announced before they were fully perfected. Scottish educators were in consultation with him as to the proper disposition of the gift when unfortunately some one "leaked," and set off prematurely the wiseacres of the press. In a long course of generous giving, it has never been Mr. Carnegie's way to give without consulting with the recipient and making sure that the gift was acceptable; and while the details of his Scottish benefaction are not yet known, it may be taken for granted that the money will be wisely expended. This much appears certain, that the money will be spent at least in part for secondary schools; that there is something more in mind than the supplying of free university scholarships; and that the gift will help towards the coordination of the Scottish schools, from the lowest to the highest. The reaction upon the English educational system—or rather chaos—should be considerable. Already Scotland, with her popular universities and secondary schools under the School Boards, is far in advance of England; when a well-articulated system is achieved in Scotland, England will hardly be able to stand still without adequate secondary schools or universities for the people. Already the reproach of present conditions is keenly felt in England, and Tories like the Duke of Devonshire and Liberals like Sir H. Campbell-Bannerman unite in urging upon wealthy Englishmen the duty of emulating Mr. Carnegie, in a more generous support of the English universities. Mr. Carnegie may well have forecasted these secondary effects.

COURT AND ADVOCATE.

The members of the Cabinet with the President on his travels sent a telegram to ex-Attorney-General Griggs, congratulating him upon "the action of the Supreme Court in sustaining the able argument he made before the Court." It followed that these members of the Cabinet had not read or weighed the various opinions rendered by the Court. The fact is, that the Court was 8 to 1 against the main contention of Mr. Griggs—namely, that Congress is unhampered by the Constitution in dealing with the Territories; that it could, for example, as he maintained, levy an import tax on goods coming from Arizona. This was explicitly stated by Chief Justice Fuller. Referring to the opinion of Justice White, concurred in by Justices Shiras, McKenna, and Gray, he said that it distinctly "rejected" the "position assumed by the Attorney-General with a candor and ability that did him great credit"—the position, that is, that "the power of Congress over all the Territories is not restricted by the Constitution."

This is strictly true, and it is highly important to have it known. Judge Brown, whom all the Administration newspapers, along with his colleagues on the bench, are rebuking for his muddled and inconsistent opinions, was the only one to go over to Mr. Griggs's view. Who is to be congratulated, or commiserated, on this it would be hard to say. The facts are as follows: Chief Justice Fuller, with Justices Brewer, Harlan, and Peckham, held that Porto Rico is a part of the United States, and that the constitutional rule of uniformity in taxation applies to it. Justice White, with the assent of Gray, McKenna, and Shiras, held that Porto Rico is not a part of the United States, but that, if it were, the constitutional rule would apply. Only Justice Brown took the Griggsian position that Porto Rico is a part of the United States, but that the Constitution does not apply. As Justice McKenna remarked, in his sneering criticism of Justice Brown, it was indeed a "strange road" which brought together such contradictory and mutually repellent opinions as really went to the making up of the majority decision of the Court. But, in any case, it is satisfactory to know that the Court was 8 to 1 against Griggs. The Territories are safe, even if the islands are not, from unequal and unjust taxation.

Now, upon what did Justice Brown rely, in the last analysis, for his opinion that Congress has unrestricted power over newly acquired territory? Confessedly, upon the inconvenient "consequences" which would follow from a constitutional restriction of that power. If the old constitutional view were to be clung to, he said, "the consequences will be extremely serious." Justice White was equally explicit. He made out Porto Rico to be neither fish nor fowl nor good red herring, but, as the Chief Justice said, a kind of "disembodied shadow in an intermediate state of ambiguous existence for an indefinite period." Why was he driven to do that? From the fear of consequences. He asserted that the "incorporation" of territory by treaty "may wreck our institutions," by bringing in "millions of inhabitants of alien territory" to overthrow "the whole structure of our Government." It was to "avoid evil consequences" that Justice White felt bound to hold that Porto Rico was not a part of the United States, and so that its citizens were not entitled to any of the privileges and immunities of the Constitution of the United States. Upon all this strange judicial reasoning *ab inconvenienti*, we think the sufficient comment is to be found in Justice Harlan's opinion: "If a particular race will not assimilate with our people, and cannot with safety to our institutions be brought within the operation of the Constitution, *that is a matter to be thought of when it is proposed to acquire their territory by treaty.*"

But it is a superb indifference to "consequences" which Justice Brown displays when it comes to the consequences of his own decision. He refers to the fears which "many eminent men" feel lest "an unrestrained possession of power on the part of Congress" may lead to a "centralized despotism." Never fear, says the cheerful Judge, for "there are certain principles of natural justice inherent in the Anglo-Saxon character which need no expression in constitutions or statutes to give them effect, or to secure dependencies against legislation manifestly hostile to their real interests." On this the only appropriate remark is that there is also a certain thing known as "gall" in the Anglo-Saxon character, and that Justice Brown shows us what it is. What has all the fight for Anglo-Saxon charters and statutes and constitutions, from Runnymede to Bunker Hill, been about? When we were a dependency of Anglo-Saxon Great Britain, did the inherent justice of the Anglo-Saxon character protect us from legislation hostile to our real interests? Has Justice Brown never read the Declaration of Independence, with its picture of the inherent justice of the Anglo-Saxon character? And what would he say of the inherent justice of the Anglo-Saxon character in governing Ireland to-day?

We can scarcely speak of such nonsense with patience. It is not contempt of court to point out the glaring absurdity, the travesty of history, involved in these assumptions of Judge Brown's, because his own colleagues on the bench do it. They justly say, and in weighty words, that this has always been a government of enumerated powers. If Anglo-Saxon character stands for anything, it stands for dread of unlimited power, whether in King, President, Parliament, or Congress. To secure the citizen in his liberty, the local government in its rights, by a *litera scripta*, has, in fact, been the norm and aim of the Anglo-Saxon struggle for freedom. Talk about aliens overthrowing the structure of our government! We do it ourselves the moment we make light of the solemn constitutional checks on the madness of the hour, on the ambition of men in office, on the power of a popular assembly.

It is because we believe that the recent decision of the Supreme Court does, in the grave language of the Chief Justice, tend to remove well-considered and constitutional "limitations on the exercise of arbitrary power," and to make justice, in ex-President Harrison's phrase, a matter not of right, but of benevolence, that we consider it too serious a departure from our past—from the past of our race—to remain long unquestioned. We must hope, with Mr. Bourke Cockran (Judge Brown ought to consult him about the inherent justice of the Anglo-Saxon character), "in the future litigations to which it opens the door, that the conclusions of the minority, vindicated, as truth is always vindicated, by a saner and more harmonious process of reasoning, will prevail over the decision reached in a tumult of confusing, contradictory opinions by an irreconcilably discordant majority."

A CASE FOR REARGUMENT.

The more the decision of the Supreme Court in the insular cases is studied, the less satisfaction it gives to anybody. It left unsettled as much as it settled, and, in what it purported to settle, resort was had to violent forcing of opposite arguments into a mechanical, not a chemical mixture. The result is that even so good an Administration newspaper as the New York *Times*, which hoped for and accepted the decision giving Congress unlimited powed over our island possessions, speaks of the opinion of the Court as without "intellectual or moral weight." In fact, the entire press of the country is busy pointing out or trying to explain away the inconsistencies of the several decisions. The Attorney-General is in doubt what the real effect of the decision is; so is Secretary Root, so is the President. There is a general and painful feeling among lawyers that the decision was really *in*decision, and that the Court went upon the theory which Cardinal Newman declared to be that of all trimming minds, that "Mistiness is the mother of reason."

Now, in these circumstances, we submit that it is highly desirable for the Supreme Court to follow its own precedent in the income-tax cases and order a reargument. On the 8th of April, 1895, the Supreme Court rendered its

first decision on the constitutionality of the income tax, but this was as halting and inconclusive as its present decision in the insular cases. It upheld parts of the Income-Tax Law, disallowed parts, and was silent as to other parts. This left all parties dissatisfied; and application was made for reargument. When this was granted and had, the Court, as everybody knows, arrived at a clear-cut decision on all points. It will be remembered, also, that a highly effective part of Mr. Choate's second argument was the use which he made of the partial decision of the Court in its first opinion. It had decided that a tax on income derived from land was unconstitutional, and the advocate pressed home the reasoning that, having gone so far, it must go farther, as it finally did. And in the present decision of the Supreme Court a similar opportunity is offered to build up a powerful argument *ex concessis*. We will briefly indicate it.

In the opinion read by Justice White, Justices Shiras and McKenna concurring, he said:

"If that island [Porto Rico] was a part of the United States, the duty was repugnant to the Constitution, since the authority to levy an import duty conferred by the Constitution on Congress does not, as I have conceded, include the right to lay such a burden on goods coming from one to another part of the United States."

Now, who is to decide whether Porto Rico is a part of the United States? The Supreme Court, of course. Well, the Supreme Court had decided, *that very afternoon*, that Porto Rico *is* a part of the United States. The decision in the De Lima case, read by Justice Brown with the concurrence of four other justices, held that territory acquired by treaty is "acquired as absolutely as if the annexation were made by act of Congress" (Texas and Hawaii), that, "by the ratification of the Treaty of Paris, the island became territory of the United States," and that, therefore, "the duties were illegally exacted."

What Justice White and those who concurred with him did, therefore, was to upset a decision of the Supreme Court within an hour or so of the time it had been rendered. The doctrine of *stare decisis* did not stand for one afternoon. "If," said Justice White at 3:15 P. M., "Porto Rico was a part of the United States——" "But, your Honor, the Court of which you are an ornament decided only an hour and twenty minutes ago that it *is* a part of the United States. If the Court can reverse itself with this lightning speed, may it not turn squarely about on its present decision before the ink dries on its opinions?" Justice White was perfectly frank about what was going on. In his dissenting opinion in the De Lima case he bluntly announced that the Court was about to undo its work in that case, and would reverse itself in a few minutes. So it did, but what an astonishing performance for the highest court in the land!

Suppose the De Lima case had been decided last instead of first. Then that would in principle have reversed the decision in the Downes case, and the Court would have held the Porto Rican tariff invalid! Surely, we do not like to think of the effect of two judgments of the Supreme Court, read on the same day, depending wholly upon the order in which they are read. It is too much like one set of judges "getting the drop" on the other, or importing into judicial matters the traditional value of the "woman's last word." What it all grew out of is perfectly clear. The judges were hopelessly at variance. They wrote separate and conflicting opinions, and passed them around to be criticised and cut up by each other. Then it was suddenly discovered that there was a surface agreement in a conclusion—though reached by totally irreconcilable arguments—between Justices Brown, Gray, McKenna, Shiras, and White, and that, if they were shrewd enough to read their decision last, thereby upsetting at 3:15 a previous decision rendered at 1:55, it would stand as the decision of the Court!

If this is not a plain case for reconsideration, rehearing, and reargument, there never was one. The first income-tax decision was a model of lucidity and logic compared with the limping, the obscure, the inconsequential and self-contradictory opinions in the insular cases. The glaring and instantaneous reversal of itself by the Court which we have pointed out could be used with deadly effect by counsel in a fresh argument. That is what is needed—argument on the law and Constitution, not orations about "consequences," not assertions that this is a "sovereign nation" and can therefore do what the Constitution says it cannot do. There is an old story of an expatriated Scotsman on his deathbed to whom a well-meaning clergyman brought the consolations of religion. He offered the usual aid in vain. "Na! na!" said the Scotsman, "I dinna want ye to pray or to read to me, mon—I want ye to argy." That is what the American people wants of the Supreme Court—not selections from Imperialistic Scriptures, not prayer to the god of battles, but argument on the law and the Constitution—argument that is convincing and that does not visibly cut its own throat. As we have not yet had this, we can but hope that the Court will find a way to give it to us before it gets through with the insular cases.

CHRISTIANIZING CHINA.

Announcement was made on Monday of Count von Waldersee's withdrawal from Pekin, although a part of the German forces will remain some time longer. The American troops departed several weeks ago. The French and the greater part of the Japanese are now marching to the coast. Within a short time there will be no foreign military force in Pekin except the usual legation guards. That the troops of the so-called Christian Powers have done their work thoroughly there can be no doubt. Over the country occupied by them they have made a solitude which is called peace. A quietness almost like that of death reigns over the territory between the seacoast and the capital of the Chinese empire. A recent letter from the special correspondent of the London *Times* tells in these words what he witnessed there:

"Seldom has a population had to suffer so severely for the sins of its rulers as the misguided people of northern China. I have seen countries devastated by war during the Franco-German struggle and during the Russian campaign in the Balkans, but none presented such a scene of desolation as the region traversed by the railway between the mouth of the Pei-ho and Pekin. It is, of course, in many cases difficult to distinguish between the destruction wrought by the Boxers and the Chinese troops and that inflicted by the allied forces; and, as far as the latter are concerned, allowance must be made both for the legitimate exigencies of warfare, and for the natural tendency towards reprisals which a conflict with a barbarous foe is bound to stimulate. Yet it cannot, I fear, be denied that our vaunted civilization has little reason to be proud of the mark which it has left on northern China in the last year of the nineteenth century. Not that the Chinese themselves have any right to complain, for, according to their own standards, they have been treated, on the whole, with a leniency they can hardly understand; but those are not the standards which Western nations have set up for themselves."

This writer, although not wishing to dwell on the horrors that passed under his eyes or came within his knowledge, relates particular instances of wanton cruelty committed by soldiers wearing the uniform of civilized states, that would disgrace the Apache Indians. These were outrages not visited upon soldiers in arms, or upon people giving trouble in any way, but mostly upon men, women, and children who were trying to avoid it. Take one example out of many:

"A few days after the occupation of Pekin a Chinese woman with two small children, one of them a mere baby in arms, was crossing the Beggars' Bridge, outside the Chien Mên gate, in the main thoroughfare leading from the Chinese to the Tartar city, when a party of Russian soldiers came along. The woman was not quick enough, apparently, in getting out of their way, so they prodded the mother and the baby with their bayonets, and threw them over the parapet of the bridge into the canal below, and as the other child, a boy of five or six, lay screaming on the ground, one of the Russians seized him by the heels, dashed his brains out on the marble flags, and then flung the body headlong after the others."

These and similar horrors were justified by the Russians who committed them on the ground that, in dealing with Asiatics, it is necessary to strike hard and swiftly, and that mercy can only be shown after inspiring terror in the minds—of whom? Of the enemy? No, of babes at the breast, and of poor women seeking to carry their children out of danger.

Shocking as are the scenes where the helpless non-combatants came in contact with Christian bayonets, the picture of the waste and ruin of agriculture in the open country is, perhaps, more melancholy, since it betokens famine among a people who are seldom far removed from it. From Tientsin half way to Pekin, not a village nor even a house has been spared. Although the most fertile district in North China, supporting a dense population, it is to-day a wilderness. Not an acre of land is under cultivation. Not a cart, or a tool, or a domestic animal is to be seen. The whole population has disappeared. Whether they are alive or dead no one knows. Still less can any one say how they shall be fed the coming year, if they are still living.

The *rapprochement* of England and Germany does not prevent the writer in the *Times* from telling the truth about the German contingent. They did not arrive at Pekin until the fighting was over. Therefore, they did not have the excuse of hot blood for their ravages, "yet both in Pekin and the surrounding country their hand has, in the long run, proved systematically heavier upon the natives than perhaps that of any other nationality." They laid to heart the Emperor's words when he made his parting speech to them, and executed his commands to the letter. Reference is made also to the plunder of the Chinese Observatory by the German and French commanders, who agreed to divide among themselves, for the museums of Berlin and Paris, the splendid bronze instruments that have stood on the wall of Pekin for more than two centuries. Nothing in the whole campaign has put such a stigma on Germany and France together as this act of official plunder.

It is some consolation to be assured (as this writer tells us) that the American soldiers had small share in the work of wanton butchery, devastation, and plunder. We were a part of the allied forces. That was unavoidable. We were and are foremost among the peoples seeking to introduce the Christian religion into China. What impression has been made on the Chinese mind by the barbarities practised upon them during the past nine months can be only faintly imagined. If the Chinese are like other people, more hatred and terror of the Christian name must have been engendered in their breasts than can be removed by the missionaries in a hundred years.

TRUSTS AND PUBLIC POLICY.

In the June number of the *Atlantic Monthly* Prof. Charles J. Bullock of Williams College has a well-considered article on the subject of "Trusts and Public Policy." His aim is to ascertain how far the existing combinations of industries are justified by any service which they render to the public; what remedies are available to correct the evils of monopolized industry; and whether, if monopoly is inevitable, it ought to be private or public.

Professor Bullock considers that the claims put forth by the promoters of Trusts that they are conferring a benefit upon society by introducing economies in production, are misleading, or, at all events, inconclusive. While it is true that production on a large scale can be usually carried on more cheaply than on a small scale, this principle has its limitations. Steel cannot be produced more cheaply in the Carnegie works since they became a part of the United States Steel Corporation than before. After a certain amount of capital has been invested in a factory of any sort (a sugar refinery, for example), the maximum of efficiency is attained. If there are a dozen sugar refineries in the country, the cost of refining sugar is not lessened by bringing them all into one corporation. The cost of distributing the product may be lessened, but this is accomplished by abolishing competition. The consumer gets his sugar from one refinery only. He has no longer the choice of several. Abolishing competition does not usually result in lowering the price to the buyer. It is not intended to have that result. "One meets the reckless assertion," says Professor Bullock, "that the Trusts have not advanced prices, but the simple fact is that, in almost every case investigated, combination has been followed by an advance in charges." In a few cases where the contrary has been observed, the result has been due to a decline of the raw material. The test of the benefit to the public is found in the margin between the raw material and the finished product, not in the absolute price of the product to the consumer.

Mr. Bullock examines the other claims put forward by the Trusts that they are promoting public interests as well as their own particular interests, and finds them illusory or doubtful. On the other hand, he thinks that it is not to the benefit of society that the great bulk of the manufacturing, railroad, steamship, and perhaps banking interests of the country should be concentrated in the hands of a small group of capitalists, "wielding a power such as has never fallen to the lot of captains of industry in any other age."

Turning to the familiar question, "What are you going to do about it?" Mr. Bullock acknowledges that the difficulties are great. But he does not see any helpfulness in the attitude of certain professional economists, who advise waiting till we get more knowledge—waiting to see how it will all turn out. "Existing Trusts possess sufficient power to make the danger of ultra-radical action decidedly small, while there is always a possibility that our final remedies may be postponed until they come too late." In the first place, he would take away from the Trusts all the advantages that are now given to them by public favor. He would take away their tariff privileges. He would attack them through the railroads in every case where the railroads grant favors to them not shared by the general public. He would agitate for a national law regulating corporations of the States, in order to prevent the Trusts from dodging hither and thither, according as one State gives them better terms than others. His general ideas are set forth in the following paragraph:

> "The simple fact is, that existing laws relating to tariff duties, railroads, patents, and business corporations have offered every conceivable inducement to consolidation, and have complicated the existing situation to such an extent that we are often unable to distinguish the results of permanent economic principles or forces from the effects of our own unwise legislation. Until we remove the abuses caused by laws of our own making, we shall probably secure no general agreement in the economic principles involved; but our doubts upon many of the economic aspects of the question should not serve as an excuse for delay in removing the evils caused by forces that are in our control."

Of one thing Professor Bullock feels entirely assured, and that is that combination and consolidation are playing into the hands of the Socialists. Every new step in this direction assures them that the consolidation of all industries in one central organization would be a grand success, and, of course, that should be the Government, which exists for all. Hence, the rapid spread of the idea that municipal utilities, such as gas, electric light, and street railways, should be owned by the cities, and operated in the interest and for the profit of the public. Upon this point Professor Bullock says:

> "When the people once gained an appreciation of the fact that monopoly is inevitable in the field of municipal-service industries, the question immediately arose: Shall this monopoly be private or public? And the last ten years have witnessed a remarkable growth, among conservative people, of an opinion favorable to public ownership. The same question will certainly arise if thinking men ever become convinced that in manufacturing and other industries competition is impossible and monopoly inevitable. Only two possible alternatives will then present themselves—public or private monopoly—and those who are now occupied with the promotion or justification of Trusts will be the persons chiefly responsible in case the balance finally swings in the direction of Socialism."

Professor Bullock's present remedy is the amendment or repeal of certain laws under which the Trusts have taken shelter, or by which they have built themselves up, notably the protective tariff. This is both simple and feasible, and it is in accord with the opinions of most investigators. His suggestion for a national law of corporations would impose new and onerous duties upon the Federal Government; but it may be necessary for it to assume them. The Interstate Commerce Law points the way to such an enactment. What powers the Federal Government should assume to-

wards corporations, and how they would operate as a curb on Trusts, is a matter for careful consideration. Probably the first thing would be to require publicity of capitalization, value, earnings, dividends, etc.

Professor Bullock's concluding observation that the makers of Trusts are paving the way for Socialism is both true and weighty, but it will not deter anybody from sending out a prospectus to-morrow for a new Trust if the materials to form it can be collected, and if the public will furnish the money. The chance that at some time, more or less remote, Socialism, or the bears, may swallow us, will alarm neither the promoter who makes the shares nor the people who buy them. Both will expect to get away with their profits before the bears make their appearance.

VETERANS vs. RECRUITS.

The editor of *Harper's Magazine* comments in the June number, with the combined geniality and positiveness characteristic of his profession, on the letter of a correspondent who attacks him for giving so much space to the work of old writers. His critic complains that the old writers, although they may present new things, clothe them in an already familiar fashion, and—pursuing the same metaphor—suggests that publishers of books or magazines should follow the example of the milliner who prepares novelties for each season. In reply, the editor offers a plea of not guilty: he would rather have expected a protest against the readiness of his welcome to new writers, for whom he is always eagerly on the lookout. At the same time, he hopes that his readers are not as capricious and inconstant as his correspondent's letter would indicate, for there is no better work being done to-day than by some of the veterans. "They hold their place by merit, and not by indulgence."

This "Battle of the Books" is only the contemporary phase of a warfare that is renewed from generation to generation. Fifty years hence, editors will be discussing the same question, as they discussed it fifty years ago. It may be well to state here some considerations that are often overlooked. In the first place, there is not necessarily greater freshness or originality in the work of a new writer than in that of an old one. The beginner is indeed the more likely to be dominated by the influence of some master, or masters, of his craft. This is especially the case in the début of a poet, whose verses are almost certain to recall the mode of some earlier singer. R. L. Stevenson consciously made himself the "sedulous ape" of older writers until he had fashioned a style of his own; but it is generally without any such deliberate purpose that the experimenter in poetry practises his echoes. Sometimes many years pass before an authentic note begins to be heard. There is little interest for the reader in the exercises of this initiatory process; they can scarcely give greater pleasure than the study of a schoolboy's copy-book. It is this conventionality of the beginner that delayed the acceptance of 'David Harum.' The first part of the book, running to scores of pages, gave no sign of anything different from the work of hundreds of other writers. Publishers' readers, who are expected to taste a MS. rather than to devour every scrap of it, naturally rejected it one after another. On the evidence of such quality as the author had displayed in this first section, no other verdict was possible. It is not until one reaches the character of David Harum himself that any "distinction" is evident. A practised writer might not have drawn this character with greater skill than Mr. Westcott's, but he would not have handicapped his story by putting so much amateurish commonplace in the forefront.

On the other hand, the experience of the mature author is not all to the good. It has brought with it, of course, a certain mastery of technique and, unless the man is a hermit, a wider acquaintance with human affairs; but the discovery that such and such a kind of work "takes," exposes the writer to the danger of limiting his efforts to the style that has brought him popularity. He may have such a wealth of resource that he can produce book after book on the same lines without becoming thin, but it is at least possible that he may not. In that case, this very frequency of practice becomes a drawback. For example, a short magazine story, whose climax is a pathetic death-bed, may move the reader to tears; but he resents being expected to weep at a dozen such scenes successively disposed in one volume without a dry interval. There is really no demand for a literary specialist in death-beds. Dr. Conan Doyle's termination of his Sherlock Holmes series has caused keen regret to a multitude of admirers, who would fain have accompanied the ingenious detective in the unravelling of further mysteries; but the author's decision was probably a wise one from the standpoint of his own reputation, which is now in no danger of suffering either from any falling-off in his own skill or from any relaxation of the interest of his readers.

In another respect, also, the literary veteran is exposed to greater danger than the recruit. While the years may not have taken anything either from his intellectual resources or from his workmanship, his very success may indirectly have impaired his quality by making him indifferent to thoroughness of preparation. He can no longer afford the time to take pains. His own contracts, by which he has pledged himself to deliver at fixed dates various combinations of so many thousand words, hamper both his peace of mind and the spontaneity of his work. To the successful author the demands of the publisher for punctual "copy" scarcely allow greater opportunity for quiet contemplation than is permitted to the midnight journalist by the printer's devil. The result is that the books produced under such conditions gasp with the breathlessness of a reporter's "story" written against time. The very pressure of these conditions may give life and movement to their product, but it will be lacking in that maturity of thought, as well as that charm of style, without which no literature can endure.

In this perpetual competition between the old writer and the new, there is one point in which a beginner will always have an advantage. His work may suffer from excess of imitation or from lack of experience and skill, but, if ability is there, the mysterious element of "promise" will give him favor in the eyes of the reader. In watching the development of a young writer one is kept constantly alert by the possibility of surprises. The seniors, by the time they have become seniors, have their strength measured and their place allotted; the verdict upon them may perhaps be revised in some degree, but it is not likely that the material for the verdict will be affected by any later addition. If old age contributes a supplement, its style and quality will be of a piece with what has preceded. But when a new force is revealed in the literary world, who knows what channels it will make for itself before it is spent? The sub-editor of an Indian newspaper catches the public ear by short stories depicting the life around him with a graphic realism unequalled by any previous writer. It is evident that he has a future; but what critic can predict that from his pen will some day come "The Recessional" or "McAndrew's Hymn"—not to say "The Absent-Minded Beggar"? When to the intrinsic attraction of an interesting book there is added the fascination of a literary problem, this combination of the known and the unknown should suffice to put the work of any new writer of talent high up on the list of publishers' sales.

A SPECIAL VISIT TO A PARSI TOWER OF SILENCE.

INDIA, April, 1901.

When travelling in India, a visit to Bombay means necessarily a visit to the Parsi Dakhmas, or Towers of Silence. There, on Malabar Hill, the finest site of the City of the Beautiful Harbor, the faithful followers of Zoroaster expose their dead to be devoured by the vultures, or heaven-sent birds of Ormazd. Scrupulously, these worshippers keep up the prescriptions of the Avesta, their ancient sacred book, which prohibits burning a body, or burying it, or throwing it into the water, lest the sacredness of nature's elements be defiled; and, whatever may become of the mortal remains of the human frame, they believe firmly in the immortality of the soul. A strange custom their ancient mode of disposing of the dead seems to be, and yet in a tropical climate much may be said in its favor.

The delightful situation of the Bombay Towers might make one "almost in love with death," as was said by Shelley of Keats's final resting-place at Rome. Situated in the midst of luxuriant palm gardens that crown with a heavy garland of tropical vegetation the hill on which they stand, they command a delightful view over the outspread city beneath, or again far over the blue bay of this Naples of the East. But neither the visit which I first paid to these Bombay Towers of Silence, nor the afternoon spent at the Dakhma in the city of Ajmere, where the Tower stands upon a fine height amid sharp jutting hills, and where I was allowed to approach nearer than ordinarily to the forbidden precinct, interested me so much as the visit which it was my privilege to pay to the new Dakhma at Ooran, near Bombay, on returning to that metropolis for the second time. I was on the point of starting for Madras and Ceylon when, late in the afternoon, a note came from one of the most distinguished of the Parsi priests telling me I should have an opportunity that rarely occurred of seeing

next morning a Tower of Silence, not from the distance of thirty paces, prescribed by the ancient books, but from near by; and not from the outside, but from the actual inside of the Tower itself. This was a new Dakhma that had just been finished, but not yet consecrated, for otherwise a non-Zoroastrian would never be allowed to enter its walls or to approach the building so closely. The site where it was erected was Ooran, on an island some miles across the harbor of Bombay, and the hour for starting, as the note stated, would be before dawn of the following day. It did not take long to arrange my travelling details so as to be able to accept this unusual invitation, an unexpected occasion to which I looked forward naturally with the liveliest interest.

It was not yet daybreak next morning when the eldest son of the white-robed priest came to my door at the hour appointed. He was to be my guide to the shore, where the rest of the party were waiting, and a steam launch was in readiness to convey us to the island. As I reached the quay, there stood the kindly priest; and the warm welcome that greeted me from his genial hand seemed like a matin benediction. His wife and children were with him, and the graceful presence of the daughter and widow of a late distinguished French Orientalist made this momentary union of East and West the more complete. The sun was just coming up out of the bay. As its brilliant disk appeared above the waves, we noticed near by a Parsi worshipper greeting the rising orb of day, and reciting appropriate verses from the Avesta, with prayers added in his Gujarati vernacular. Another worshipper at that early hour had brought to the strand an offering of cocoanut, rice, and betel leaves—a gift to the waters, as our host, the priest, explained. In a minute or two more the sun was wholly risen, and we were ready to embark. An hour's delightful sail under full steam brought our launch beneath the hill of Ooran, and there on the height, sharply outlined against the green background of the sloping hillside, stood the new Dakhma, to which our visit was to be paid.

The settlement of Ooran itself is chiefly made up of wine-producers and wine-merchants. The most of these are Parsis; and, curiously enough, in this way is kept up the tradition of the tavern "wine-house of the Magians," so familiar in Persian poetry, as our priestly host incidentally mentioned, and as readers of Hafiz and Omar Khayyám will well recall. A pleasant group of these descendants of the "Magians" of old stood ready now to greet us on the Ooran pier. A hearty welcome it was as we set foot on the slippery stones of the wave-washed causeway, and a few minutes later we were whirling along up the hill toward the Tower in little two-wheeled tongas that resembled, for all the world, a covered jaunting-car set wrongwise on its axle. A firm hold one had to keep on the side of these jouncing vehicles to retain one's seat, as the skurrying little horses dashed madly round a sudden bend of the rough road at headlong gallop. The view, however, was lovely. The bristling cactuses that lined the reddish sand of the dusty path seemed to set off the mass of tropical shrubs and creepers that served as a background and gave place in turn to a screen of soft, waving palms. Through this rich curtain of varied hues, a glimpse could be had over the bay to the distant city, now sharply defined in the blazing sun, that combined with the blue of the sea in producing a striking image of complex light and shade.

But now we are arrived at the Dakhma itself. It is not so large as some of the Towers in the group at Bombay, for Ooran's population is not extensive; yet its circumference, I should say, was not less than seventy-five feet, and its diameter a third of that amount. The wall of the Tower struck one as being a dozen feet high, and it is built from blocks of a handsome brownish stone carefully set and firmly cemented. The whole structure rests upon a solid foundation of masonry. A tablet over the entrance door records that the building belongs to this community, who still join in keeping up the Zoroastrian creed. The consecration services had not yet taken place, as after that no living person except the *nasasalars*, or body-bearers, is allowed to enter the Dakhma when once the building has been dedicated to its sacred purpose. Entering through the stone portal with its iron door, a person might imagine himself within some large gas reservoir built of massive stone. But the top is wholly open to the sky so that the sun may shine inside without obstruction. Around the stone coping of the wall ran the ledge where later the expectant vultures will sit. The circular floor of the Dakhma was carefully paved with large flagging-stones, each slab being the size of a human body, and scooped out to the depth of two inches. These slabs or receptacles are called *pavis*, and they are arranged with mathematical precision in concentric rows around an open well or pit in the centre of the Tower. Towards this they all slant with a slight inclination, so that the floor of the Dakhma is a little lower all round the central pit than near the encircling wall at the outer edge. The reason for this will presently be clear. The entire arrangement of the concentric rows of *pavi* slabs that make up the floor, recalled great bands on the spokes of some huge wheel, the central pit being the hub. What I have termed the spokes are nothing else than narrow channels or ducts that lead from each receiving slab into the central well. They act as conduits for any fluid matter that may run from the skeleton after the carnivorous birds have completed their task. These ducts, moreover, as the priest pointed out, are carefully constructed so that the contents of one receiving slab shall not in any way empty into another, but each *pavi* remains separate and distinct from the one that adjoins it. Sufficient space is also allowed between each of the concentric rows of slabs so that the corpse-bearers may move freely about in performing their necessary functions. The new Tower at Ooran differs from the ordinary Dakhma in one slight detail. In the ordinary Tower of Silence the innermost circle of the concentric rows, with its receptacle slabs naturally narrower and smaller near the central well, is reserved for children; the second row is for the bodies of women; the outermost and largest *pavis* are designed for men. At Ooran, however, the entire space between three of the spokes is simply constructed with shorter and smaller receptacles, the size of a child's body; all the other slabs are the full length of a human frame.

Our attention was next drawn by the priest to the central well. Its diameter was about ten feet, and its depth nearly the same. A couple of stone steps lead down to the bottom. These are for use when the *nasasalars* have to descend to clear the outlets from it into the four great drains that run out at right angles beneath the floor of the tower and terminate in porous cisterns of chalk, quicklime, and sand, for purifying any possible remains that might defile the sacred earth by their flow. The central pit itself is an ossuary. After the body on the stone receptacle above has been denuded of the flesh by the ravenous birds, as happens in less than an hour, the skeleton is allowed to remain for a fortnight or a month undisturbed. The *nasasalars* then, with iron tongs and gloved hands, take up the bones and deposit them in the well, where they soon crumble into dust or are reduced to powder by the bleaching heat of the tropical sun. Thus, high and low, rich and poor, old and young, are brought together by all-levelling death. United in life and undivided in death, the Parsis form a single and individual community.

After inspecting the structure from the other side of the pit, and noticing an iron chain that ran from the stone floor where we were standing to the top of the Dakhma wall, a means of escape in case life by any chance were really not extinct when the body was brought into the Tower, our attention was called to a loophole in the closely cemented circling wall. A peep through this opening showed that it looked directly out towards a little chapel or shrine, the Sagri, a hundred or more feet away. As soon as the Dakhma is dedicated, a lamp with unquenched flame will burn night by night in this Sagri, so as to send its beams through the loophole into the Tower itself. Thus, true to the tenets of the Zoroastrian belief, the place of the dead is never without light, the sun by day or the beams of this hallowed lamp by night, symbolic of the light beyond the present life, the ray of hope beyond the grave.

Our priestly host also explained certain other details of his faith—a faith which has numerous points of resemblance to our own Christianity—and of which he is a noble representative in the excellence of his character and in the conduct of his daily life. But the time had arrived for us to leave the Dakhma, as the morning sun was beginning to scorch with its blazing heat. Hospitality and breakfast, however, awaited us at the home of a member of the Zoroastrian community, another follower of the teachings of the Prophet of Ancient Iran. A walk through the beautiful Oriental gardens of this gentleman's estate completed the visit. The Tower will soon be consecrated to its service in carrying on that ancient Persian method of disposing of the dead, regarding which so much has been written, even from the days of Herodotus, the father of history. A. V. Williams Jackson.

MADAME D'HOUDETOT.

PARIS, May 21, 1901.

The name of Madame d'Houdetot will be remembered as long as any one reads the 'Confessions' of Jean Jacques Rousseau; but she deserved a better biographer than M. Hippolyte Buffenoir, who has just published a volume under the title of 'La Comtesse d'Houdetot: Une Amie de J. J. Rous-

seau.' Madame d'Houdetot belonged with Madame d'Épinay to the "société polie" of the end of the eighteenth century; not to the society of the Court, but to that which was recruited chiefly in the wealthy world of the *fermiers-généraux*, and in which we find, along with very loose ideas of morality —we may almost say much corruption— great refinement and culture, a passionate love of art and of literature, a great leaning towards the new ideas which were current under the name of philosophy. But if Madame d'Houdetot lived in the charmed circle to which Madame d'Épinay, her sister-in-law, belonged, she cannot be compared with her in a literary sense. The memoirs of Madame d'Épinay are extremely clever and agreeable, and are among the most interesting documents of the time which preceded the Revolution. Madame d'Houdetot left no memoirs; M. Buffenoir might as well not have given us forty short poems which she wrote at various times for her friends—for Saint-Lambert, for Madame Geoffrin, Watelet, etc. In writing these utterly insignificant verses she merely followed the fashion of her time, generally addressing some person or celebrating some anniversary.

Madame d'Houdetot was born Sophie La Live de Bellegarde, on the 18th of December, 1730, in the Rue St. Honoré, not far from the Place Vendôme. She lost her mother at the age of ten, and was educated by the care of an aunt, Madame d'Esclavelles. She was called "Mimi" in the family. At the age of eighteen, after the fashion of the time, she was married to a young man whom she hardly knew, viz., Count d'Houdetot. Madame d'Épinay, who was married to M. La Live d'Épinay, the eldest son of M. de Bellegarde, gives a lively account of the marriage of her sister-in-law:

"Mimi is going to be married, for a positive fact. She marries a Count d'Houdetot, a young man of quality, but without fortune; aged twenty-two, a gambler, ugly as the devil, and little advanced in the service; in fact, unknown, and, to all appearance, made to be so."

In an appendix to his book, M. Buffenoir cites a few vivacious pages from Madame d'Épinay's memoirs on the rapid preliminaries of this marriage. He would have done better to incorporate them in his text. The introduction took place at the home of M. de Villemur, godfather of the future Madame d'Houdetot. After dinner, when coffee was served, M. de Villemur suddenly addressed M. d'Houdetot, the father: "Well, my friend, we are here in the bosom of the family; between friends like ourselves, there need be no mystery. Yes or no is sufficient. Is my son to your liking? Yes or no. Is he to your daughter's liking? Yes or no again." And the parents began at once to discuss the question of the dowry. The Marquis d'Houdetot gave his son 18,000 lires a year in farms in Normandy, and the *guidon* of gendarmerie which he had bought for him. Mademoiselle de Bellegarde received in dower her mother's diamonds. "I know nothing of business," said this parent. "I give all I can, especially my diamonds; they are fine. I don't know exactly how many I have, but as many as they are, I give them to her." During this interesting conversation the two young people were allowed to talk to each other in a corner of the room. When he was married, M. d'Houdetot had already a liaison with a married lady which lasted forty-eight years after his marriage. It is one of the characteristics of the time, this fidelity in the wrong place—we shall note it also in Madame d'Houdetot's life; her liaison with Saint-Lambert lasted fifty-two years. M. d'Houdetot, who accepted it without any difficulty, once said: "We had, both Madame d'Houdetot and myself, a call to be faithful; only there has been a misunderstanding."

In July, 1749, Madame d'Houdetot had a son (who lived till 1825, and had a numerous posterity); in 1753 she had a daughter. Her husband gave the greater part of his life to his duties as a soldier, and by degrees attained the rank of lieutenant-general. M. de Bellegarde died in 1751, and M. d'Houdetot, with the part of his succession which devolved on his wife, bought the Château de la Meilleraye, which, three years after, he resold for a million to the Duchess de Chaulnes. Madame d'Houdetot was left by her husband in this château; it was there that she made the acquaintance of Saint-Lambert and became attached to him. Her husband allowed her every liberty, and said to the Maréchale d'Aubeterre, who complained to him of his wife's commencing liaison, "I have nothing, madame, to exact from my wife but decency in her conduct."

The Marquis of Saint-Lambert, born in Lorraine, in 1717, had lived in the intimate circle of King Stanislas, had conquered the affections of Madame du Châtelet, and been the happy rival of Voltaire. Madame du Châtelet died in confinement, and, after her death, a medallion was found under her pillow, bearing the portrait of Saint-Lambert. "This adventure," said Voltaire to the Marquis du Châtelet, "does honor neither to you nor to me." Saint-Lambert grew famous. He left Lorraine and became a colonel in France. He was a poet as well as a soldier, and became acquainted with Diderot, Grimm, Jean Jacques Rousseau, Duclos, with all the philosophical company. Marmontel speaks highly of his charming manners, which were those of the little Court of Lunéville, of his exquisite taste and refinement. He saw Madame d'Houdetot, and became first her friend, and very soon her lover and faithful companion. She would never have gone down to posterity if it had not been for her acquaintance with Jean Jacques Rousseau. She would have been forgotten, as well as Saint-Lambert, though Saint-Lambert was a writer (but who now reads his poems?), if Rousseau had not, like a comet, crossed the quiet lives which they were leading.

Rousseau saw Madame d'Houdetot for the first time the very day before her marriage. "I found her," he says, "very amiable, but I was far from foreseeing that this young person would some day decide my life, and would draw me innocently into the abyss where I am now." Ten years elapse; Rousseau becomes famous; he lives in the Hermitage of Montmorency and composes the 'Nouvelle Héloïse.' His great passion begins in the spring of 1756, after a visit from Madame d'Houdetot, whose carriage had been upset in the neighborhood of the Hermitage. She left it, and came on foot, covered with mud. Thérèse, who was living with Rousseau, had to give her a change of clothing. A year afterwards, in the spring of 1757, Madame d'Houdetot made him a second unexpected visit; this time on horseback. The passion now declared itself. Rousseau has traced of his idol a portrait which is too long to be cited. She was living at the time alone; her husband was with the army, as was Saint-Lambert. Madame d'Houdetot was idle, Rousseau was writing the love-letters of the 'Nouvelle Héloïse.' His passion was, I might say, a literary passion; when we read now the burning pages which he addressed to his idol, they compare very well with the letters of the 'Nouvelle Héloïse,' but they give the reader the impression that Rousseau's passion was more imaginative than otherwise. He is too eloquent; he does not write for one person, he writes for an effect, for a public. He half deceived himself in order to be more sincere.

Many people, and I confess being one of the number, hold that love-letters ought never to be published; they interest only two persons, the writer and the person who receives the letter. I am truly surprised at the success which certain love-letters are just now having in England. Love-letters can be read only if some incident and collateral subjects are introduced in them. The success of the 'Nouvelle Héloïse' was chiefly due to the new theories of life, the new views of nature, which Rousseau mixed up with his subject. His relations with Madame d'Houdetot lasted hardly nine months. Their visits, their correspondence, their meetings, their long promenades became the theme of malicious comment among the friends of Madame d'Épinay and among the philosophers who were hostile to Rousseau. A letter was sent to Saint-Lambert, who reproached Madame d'Houdetot. Rousseau assures us that this informing was the work of Madame d'Houdetot; others believe that the letter was written by Thérèse, who was jealous of Rousseau. The charm was broken; Madame d'Houdetot told Rousseau that she must interrupt an intercourse which had become a matter of gossip. Rousseau left the Hermitage on the 15th of December, and his relations with Madame d'Houdetot became more and more distant. When the 'Confessions' appeared in 1781, she bought a copy and found in it her own portrait; she kept a manuscript of the 'Nouvelle Héloïse' which Rousseau had copied for her.

Saint-Lambert had been fortunately overlooked during the Revolution. He spent the last years of his life with his friend, and died in 1803. She survived him for ten years, and became attached during her old age to M. de Sommariva, ex-President of the Cisalpine Republic, who was born in Milan and lived in Paris. Their intimacy took almost the appearance of love, and was subject for comment. Lady Morgan said: "Time and circumstances have altered everything except the heart and the imagination of Madame d'Houdetot." M. de Sommariva had a large fortune and bought all the estates of M. de Bellegarde. He sent every morning to her a bouquet and a letter. He enjoyed her conversation, her amiable letters; he had for her, he said himself, the affection of a son for a mother, of a mother for her child. Madame d'Houdetot died in Paris on the 28th of January, 1813, aged eighty-three.

Correspondence.

PROTECTIONISM OVERRIDES THE CONSTITUTION.

To the Editor of The Nation:

Sir: The American people, as they con-

template the spectacle of a court that *was* Supreme rent in twain by the simple and elementary question whether the President and the Congress are bound by the limitations of the Constitution, may profitably recur to a memorable utterance of the late Thomas F. Bayard. In his notable address on "Individual Freedom," delivered before the Edinburgh Philosophical Institution on November 7, 1895, Mr. Bayard said:

"In my own country, I have witnessed the insatiable growth of that form of State Socialism styled 'Protection,' which I believe has done more to foster class legislation and create inequality of fortune, to corrupt public life, to banish men of independent mind and character from the public councils, to lower the tone of national representation, blunt public conscience, create false standards in the popular mind, to familiarize it with reliance on State aid and guardianship in private affairs, divorce ethics from politics, and place politics upon the low level of a mercenary scramble, than any other single cause. Step by step, and largely owing to the confusion of civil strife, it has succeeded in obtaining control of the sovereign power of taxation, never hesitating at any alliance, or the resort to any combination, that promised to assist its purpose of perverting public taxation from its only true justification and function—of creating revenue for the support of the government of the whole people—into an engine for the selfish and private profit of allied beneficiaries and combinations called 'Trusts.' Under its dictation, individual enterprise and independence have been oppressed, and the energy of discovery and invention debilitated and discouraged.

"It has unhesitatingly allied itself with every policy which tends to commercial isolation, dangerously depletes the Treasury, and saps the popular conscience by schemes of corrupting favor and largesse to special classes, whose support is thereby attracted. Thus it has done so much to throw legislation into the political market, where jobbers and chafferers take the place of statesmen.

. . . . . .

"It is incorrect to speak of 'Protection' as a national policy, for that it can never be, because it can never be other than the fostering of special interests at the expense of the rest; and this overthrows the great principle of equality before the law, and that resultant sense of justice and equality in the administration of sovereign powers which is the true cause of domestic tranquillity and human contentment. The value of 'protective' taxation to its beneficiaries consists in its inequality, for without discrimination in favor of some one, there is no advantage to any one.

. . . . . .

"The enfeeblement of individual energies and the impairment of manly self-reliance are necessarily involved, and the belief in mysterious powers of the state and a reliance upon them to take the place of individual exertion foster the growth of State Socialism, and personal liberty ceases to be the great end of government."

Since these illuminating words fell from the lips of Mr. Bayard, additional barriers to "the insatiable growth of that form of State Socialism styled 'Protection'" have been removed. Prior to our recent wars for conquest, even special privilege made public profession of devotion to the doctrine of equality. It now feels itself strong enough to appear in its true character as the enemy of equality, the foe of constitutional liberty.

It has for some time been clear that the protected interests, while retaining their practical monopoly of the American market, desire fresh fields for exploitation and new means of offence and defence in the game of international competition for trade. This two-fold purpose has led to the national expenditure, in our recent wars of conquest, of much blood and some eight hundred millions of the people's money. The final obstacle to its success was the clause of the Constitution which provides that "All duties, imposts, and excises shall be uniform throughout the United States." Unless this provision for equality of taxation could be nullified the scheme must fail.

The Chicago *Record-Herald*, which cannot be accused of unfriendliness to the powers that be, in its comment on this feature of the decision of the Supreme Court in the Downes case, says:

"This is a condition which suggests that the constitution of the court had more to do with the decision than the Constitution of the United States. It lends more popular interest to an analysis of the politics and predilections of the justices than a scrutiny of their reasoning. From the day when it became evident that the question of 'our plain duty to abolish all customs tariffs between the United States and Porto Rico' was to be passed on by the Supreme Court, there has never been any doubt as to the attitude of Justices Shiras, White, and McKenna.

"Although a Democrat, Justice White was a representative of the sugar-cane interests in the Senate, and was appointed to the Supreme Bench by President Cleveland, to remove an obstruction in the way of tariff reform in the Fifty-third Congress. His views on the relations of the United States to its insular possessions were sweetened in advance by a strong tincture of sugar.

"Justice Shiras hails from Pittsburgh, the very smelting furnace of protection of home industries from free trade with any outlying island of the sea or foreign country. Free trade between the original thirteen States of the Union is about his idea of the constitutional limitations on uniformity of duties, imposts, and excises throughout the United States. . . .

"But Chief Justice Marshall died some sixty-odd years ago, and the opinion of Justice Brown, backed by the votes of Justices Gray, Shiras, White, and McKenna, is the law of the land to-day, though it tears the constitutional limitations into shreds, and, as Justice Harlan says, launches us on 'an era of legislative absolutism.'"

The Sherman Act of 1890, which brought us to the brink of the silver abyss, was passed in exchange for votes for the McKinley tariff of that year. This Mr. Thomas B. Reed frankly admitted in the *Forum* for November, 1896. He says: "We had been sacrificed to silver." "That form of State Socialism styled 'Protection,'" which, in 1890, exchanged the Sherman Act for votes to carry the McKinley Bill, has finally demanded and secured (to use the words of Benjamin Harrison) "a construction [of the Constitution] contrary to liberty"—one that establishes at Washington "legislative absolutism." EDWIN BURRITT SMITH.

CHICAGO, June 1, 1901.

THE DECISION OF THE SUPREME COURT.

TO THE EDITOR OF THE NATION:

SIR: America (in the person of her judges) has now tried the case between herself and Porto Rico, and solemnly decided in her own favor—or, rather, in favor of the Sugar and Tobacco Trusts. Porto Rico is to be exploited at will by the American commercial interests; if it be incidentally ruined in the process, that is nothing to us. By the ingenious juggling of the Supreme Court, the inhabitants of Porto Rico are now just enough under the Constitution for America to profit financially, to the extent that the Porto Ricans are fleeced, by virtue of their anomalous position. An equal division of the rights of citizenship has thus been made: America has the rights and Porto Rico has the citizenship. The Porto Ricans are to be governed as an inferior race; they and other "territories appurtenant" are to be arbitrarily taxed by the United States Congress, without having representatives in that body. With a sense of humor which does them credit, the justices of the Supreme Court add that the Porto Ricans are to be mercifully allowed freedom of speech (when not suppressed by military dictatorship) and freedom of religion.

Yours truly, BERTRAND SHADWELL.

CHICAGO, May 31, 1901.

Notes.

The Archæological Institute of America has obtained the necessary number of subscribers to the proposed work illustrating the excavations conducted by the expedition to Assos in 1881-3, which we have previously noticed. The first number will appear in the early fall. Subscriptions may be sent to Prof. Charles Eliot Norton, or to the Treasurer of the Committee of Publication, W. F. Harris, Harvard College, Cambridge. A prospectus, giving specimen illustrations, may be had on application to the Treasurer.

The Rowfant Club's plans for reprinting the *Dial* are now matured, and go to the verge in attempted imitation of form and type, observing even the errata, and reproducing the original cover wrappers. Issue will likewise be in parts or numbers. Mr. Geo. Willis Cooke will be editor, and will prepare a supplementary volume, with much information about the Transcendental Club, the periodical, Brook Farm, etc., etc. The edition is limited to 125 sets, for club members only.

'Nietzsche,' as critic, philosopher, poet, and prophet, illustrated in selections from his works and a critical study of the man, by Thomas Common, is about to be published by E. P. Dutton & Co.

Thomas Whittaker has nearly ready 'A Century of Progress in Religious Thought,' by Prof. Walter F. Adeney.

The Shakspere Press, Westfield, Union County, N. J., announces for September next 'Bacon and Shakspere: Can They Be Reconciled?' by Dr. Appleton Morgan and Dr. Isaac Hull Platt.

A newly founded Asociación de la Libreria at Madrid, of which D. Enrique Bailly-Baillière is President, and which is apparently modelled after the Cercle Français de la Librairie, will publish fortnightly a *Bibliografía Español*, much needed, at the subscription price for this country of $3. It may be had through Lemcke & Buechner, No. 812 Broadway, New York.

The Society of German Engineers in Berlin has undertaken the preparation of an International Technical Dictionary, in German, English, and French, under the title of 'Technolexicon.' Leading representatives of the technological sciences in Europe and in America have been invited to coöperate in the preparation of this work, which is to be edited by Dr. Hubert Jansen. The aim is to secure exhaustive completeness in technical words and expressions, exactness in translation, and a uniformity in usage in the various countries and languages.

The house of Dietrich Reimer, Berlin, has in preparation 'Der Weserstrom,' one of the remarkable series of monographs, each with

its atlas, undertaken by the German Government for the physical illustration of the several watersheds of the Empire; the sixth volume of the series on German East Africa, containing cartographical and meteorological material, with a map in twenty-nine sheets; the third volume of Baron von Richthofen's great work on China, dealing with the southern part of the empire, together with the corresponding portion of the atlas; and volumes ii. and iii. of Dr. Karl Futterer's 'Durch Asien,' embodying the results of the Holderer expedition to Tibet in 1897-98.

An illustrated edition of Mr. William C. Brownell's standard work on 'French Art: Classic and Contemporary Painting and Sculpture' is to be brought out by Charles Scribner's Sons. There will be forty-eight reproductions of masterpieces.

The admirable and inexpensive series called "Library of English Classics," published by Macmillan, under Mr. A. W. Pollard's modest editorship, is extended by a new volume, made up of De Quincey's 'Confessions of an English Opium-Eater,' the two essays "On Murder Considered as One of the Fine Arts," "The Spanish Military Nun," and " The English Mail-Coach." For all these the first collected edition of De Quincey's works, carefully revised by him, has furnished the text. The typography is a pleasure to the eye.

The "Authentic Edition" of Charles Dickens's works, bearing Scribners' imprint in this country, and adorned with the old familiar illustrations, proceeds with 'Barnaby Rudge,' 'Our Mutual Friend,' and 'Great Expectations.'

Mr. Walter Crane's lectures 'Of the Decorative Illustration of Books, Old and New' (London: Bell; New York: Macmillan) owe their second edition no doubt mainly to the illustrations. Mr. Crane's own talent lies in this direction; but if he were a more skilful and entertaining writer than he is, he could hardly succeed in making readable a considerable portion of his work, consisting of description of designs not under the reader's eye. Naturally, this disadvantage is most felt in the earlier historic chapters. At the other end, in dealing with the legion of present-day illustrators, the author is constrained to make a running commentary of a very fragmentary nature. Still, for reference and for pictorial examples, the convenience of the book will keep it popular. We heartily agree with Mr. Crane as to the proper tyranny of the printed page—its squareness and proportion—over any decorative illustration introduced in it. Among the evil effects of Japanese art upon Western he justly reckons the crazy diagonals and other invasions of the rectangle and the margin which have deformed our magazines and books for so many years. Balance and symmetry are demanded by the art of Gutenberg. The praise of Morris and his Kelmscott Press is not equally justifiable in our opinion.

There is little special to be said of Miss Hurll's 'Titian' (Houghton, Mifflin & Co.), which is in the same vein as its predecessors in the useful little Riverside Art Series, but we are delighted to see that the silly prejudice against the nude as such, which caused the Board of Regents of this State to exclude the Venus of Melos from their list of photographs for schools, has not prevented the insertion of the "Medea and Venus," commonly called "Sacred and Profane Love." Surely, this pure and lovely work could do harm to no healthy child. A selection of fifteen pictures from the vast work of Titian could hardly be altogether satisfactory to any one. The present selection is good, on the whole, though we rather wonder at the omission of that most solemn of religious compositions, "The Entombment."

'Tales from Tokio,' by Clarence Ludlow Brownell (Warner & Brownell), is not a collection of short stories, as might be inferred from its title, but a series of sketches of Japanese life. It may be read with interest, though it contains little that is novel except the misprints, which are numerous and varied. Our own educationists, in their discussion of the elective system, will perhaps be edified by the incident of a class in the Imperial University which, after its third lesson in American history, addressed the professor thus: "Please, honorable master, we wish not to peruse the grand American history further; we would rejoice instead to read how balloons are made."

The late Richard Herne Shepherd's 'Bibliography of Coleridge,' originally published in *Notes and Queries*, in the summer of 1895, has been reprinted, with the aid of his notes intended for a separate publication, under the editorial revision of Col. W. F. Prideaux (London: Frank Hollings). The list is frankly neglectful of American editions of the poet, save for a reference to Prof. W. G. T. Shedd's (not "Stedd"), in 1853, which alone on either side of the water presents the complete prose works. This brochure may fairly be called entertaining reading in itself, and should find a place beside every life or library of Coleridge.

The labors of Bradshaw and Proctor have made it possible to study early printing upon a basis approaching accuracy through an identification of the size and style of type used. Unfortunately, Proctor's important list of 'Early Printed Books in the British Museum' was issued in a limited edition, contained no reproductions of titles, types, or specimen pages, and was thus wanting in an important particular. Some efforts to prepare such specimens had been made on the continent of Europe, but the results, satisfactory from many points of view, were disappointing in not supplying a standard of measure for types, by reproducing the exact size of letter used. The Boston Public Library has received by gift three boxes of the "Woolley Photographs" of early types, designed to supplement published examples. There are 300 reproductions, numbered to correspond to Proctor's "Index," and the success attained is notable, even the watermark in the paper appearing in the photograph. No descriptive text accompanies the boxes, and a reference to Proctor's list, supplemented by a second one to Mlle. Pellechet's 'Catalogue Général,' is looked upon as sufficient. It is to be hoped, however, that, as the work progresses, a more detailed list and certain measurements will be given, for so important an undertaking should not have its utility lessened through too much economy. The edition is very small.

The University Library at Heidelberg has recently acquired twenty-seven sheets of a valuable uncial Septuagint manuscript, dating from the sixth and seventh centuries. This papyrus is the largest Septuagint fragment of the kind in Germany. Both sides of the sheets are covered with a fine writing, containing the Alexandrian version of Zechariah, chapters 4 to 14, and Malachi 1 to 4. A preliminary examination makes it probable that this document belongs to the group represented by the prophet-palimpsest of Grotta Ferrata.

To do justice to the extremely careful and interesting 'Études Anglaises' of M. André Chevrillon (Paris: Hachette) would require an article almost as long as one of the essays themselves. Their writer has seen deeper into English habits of thought and feeling than is generally the case, even with Frenchmen of exceptional opportunities and penetration; he has the further advantage of a more than merely working knowledge of English, as his study of 'Nature in Shelley's Poetry' can testify. Barely mentioning the fact that an essay entitled 'La Vie Américaine' shows M. Chevrillon to be generally sympathetic towards our ideals, particularly in the matters of higher education and culture, we would call particular attention to the elaborate analysis and interpretation of Kipling's work as an artist (much the most thorough known to us from any foreign pen), but most of all to the *pièce de résistance* entitled, "L'Opinion Anglaise et la Guerre du Transvaal," which, written in England in 1900, sets forth with cold irony its author's comprehension of the complete change of English public sentiment through the corrupting spirit of Imperialism. M. Chevrillon's style is vivacious.

To those interested in the subject of colonies, the 'Deutsches Kolonial-Handbuch' (vol. i., Berlin, 1901) affords a good view of the present state of the German protectorates in Africa. It is intended, of course, to subserve practical purposes of merchants or prospective emigrants, and goes into considerable detail in its description of climate, physical geography, cost of living, freight-carrying, etc. Complete lists are given of articles subject to duty at the colonial frontiers, and the practical working of the Government and judiciary is explained. With characteristic German thoroughness, much information is imparted on the subject of the natives, their temperament and general ethnological characteristics. Catalogues of the products of native agriculture and industry, and of the articles most acceptable to the native purchaser, are of interest to importers. Statistics of trade and communication are brought up to the year 1901. No startling commercial advantages seem to have been secured by the fact of possession. The most recent colonial budgets exhibit a steadily and rapidly increasing imperial subvention, even in Togo, which until 1899 was self-supporting; but it would be hard for any nation to make much out of the unpromising German possessions. An index of names of colonial officials, missionaries, etc., closes a very useful volume, in which fulness of practical detail in no way detracts from a comprehensive view. The data presented are drawn almost exclusively from official sources, but the compilation seems to have been made in a perfectly impartial spirit. The book is the work of Dr. Rudolf Fitzner.

House and Garden is the title of a new monthly magazine just issued in Philadelphia, under the editorship of Messrs. Frank Miles Day, Wilson Eyre, jr., and Herbert C. Wise. The name suggests the point of view and the excuse for being. The controlling editorial spirit is architectural, but the particular gospel to be propagated is the

duty of fitting the house with its proper landscape-gardening environment. No better example could have been chosen than the country house called Stratford Lodge near Bryn Mawr, of which the description occupies one of the three divisions of the initial number of this periodical. Beautiful and free in itself as a design, the house is linked with an upper and a lower garden in the Italian manner, with a charm instantly felt on a mere examination of the views here provided. The Fairmount waterworks, and some old English houses in Kent and Sussex, furnish the remaining themes, and are illustrated, like the Lodge, with admirable photographs. The début of *House and Garden* is undeniably attractive, and the conductors may be relied upon to preach sound architectural doctrine. Time will show whether the cultivated public is large enough to respond with substantial support to an undertaking novel, yet not without kindred forerunners which have failed of proper appreciation.

The *British Weekly*, a leading London religious paper, publishes an interview with Bishop Hartzell which casts a remarkable light upon the intelligence of this distinguished representative of the American Methodist Episcopal Church. Dr. Hartzell eulogizes the interest taken by Mr. Cecil Rhodes in the promotion of religion in South Africa, and reports without the slightest suggestion of incredulity a statement made to him by Mr. Rhodes himself that one of his two chief ambitions is "to do the best I can for the welfare of the negro races" in that part of the world. Yet this is the same Mr. Rhodes who so bitterly complained, after the Khama incident, that "they think more of one native at home than of the whole of South Africa"; who supported in the Cape Parliament a bill which would have permitted farmers to flog their native servants; and whose Chartered Company was condemned, in an official Colonial Office report, for maintaining in Rhodesia a system of forced labor amounting practically to slavery. Bishop Hartzell tells his interviewer that he cannot understand those good brethren who so often pray, "Lord, save South Africa from the capitalists." His difficulty in understanding their position is perhaps not lessened by the fact, which comes out in the same interview, that the British South African Company has contributed towards his work a grant of 13,000 acres and buildings worth $100,000.

An encouraging indication of the intellectual progress of the South is the recent passing by the General Assembly of North Carolina of "An Act to encourage the establishment of libraries in the public schools of the rural districts." It provides —in the manner of Northern acts, *e. g.*, New Jersey's—that when any country school district shall have raised ten dollars for the establishment of a library, the County and State Boards of Education shall each contribute ten dollars for the purchase of books. These are to be loaned, free of charge, to school-children, parents, and donors, and permission is given to the districts to exchange their libraries not oftener than once in six months. In the "Rules and Regulations" issued by the Superintendent of Public Instruction, particular directions are given as to the book-case required, and the librarian is instructed in his annual report to make "mention by name of the three children of school age who have shown the greatest interest in and improvement in literature."

—The sex of the new volume of the 'American Catalogue,' for 1895-1900 (New York: *Publishers' Weekly*) would of itself be undiscoverable. That it is, so far as the preparation goes, almost exclusively feminine, is disclosed by Mr. R. R. Bowker, who names Miss Frances B. Hawley, his assistant editor, and eight other ladies (including Mrs. Augusta H. Leypoldt), as having had the burden of this closing list of books recorded (including reprints and importations) from July 1, 1895, to January 1, 1900. For the first time Mr. Bowker himself has been unable to read the page proofs in detail; on the side of subscription books Mr. A. C. Potter of Harvard University Library "has been of great assistance." These are the only men, except the printers, in sight. The present (fifth) volume completes the grand series begun with the catalogue of books in print in 1876, and, for bibliographical convenience, closes the century with 1899—embracing under that year works actually then issued, though stamped 1900. The pious wish of the Catalogue's projectors to work backward with a volume to record the American issues of 1800-1876 has not been lost sight of, but pecuniary support for the enterprise is as yet lacking. It might commend itself not inappropriately to Mr. Carnegie, as well as the desideratum of a combination of the whole series in one alphabet. Either of these objects would perhaps appear equivalent in value to the founding of a new library building *in partibus infidelium*. Hereafter, and in a way it is a pity, the dignified but unhandy quarto form of the 'American Catalogue' is to yield to the duodecimo of the 'Annual Catalogue,' whose matter, set by the linotype machine, will be kept standing during the lustrum, and then realphabetized into the two main divisions of author and title entry. This is an economy of labor and expense to which we must in reason assent; but we shall miss what now delights the eye.

—The American Baptist Publication Society, Philadelphia, publishes 'A Century of Baptist Achievement,' edited by Dr. A. H. Newman, and made up of thirty chapters contributed by as many writers apparently well qualified for their different parts. There is first a survey of Baptist history before 1801, then a survey of English, Scotch, and American conditions at the beginning of the nineteenth century. No important aspect of the century's growth and change seems to have been omitted, with the important exception of the anti-slavery agitation as affecting denominational interests. But for a few casual remarks, no one would guess from these pages the existence of the century's principal moral conflict. The looser organization of the Baptists made it easier for them to shirk responsibility, but their discouragement of anti-slavery speech and action was quite as effective as that of the more centralized denominations. Moreover, there are considerable deductions to be made from the claim of "absolute religious liberty." The autonomy of individual Baptist churches has not stood in the way of an active sensibility to heresy which has extruded the heretic with sufficient violence. The "Sketch of the Colored Baptists of the United States" is apparently an exception to the rule that the various sketches should be made from the inside, but it is done with much caution and discrimination. "Movements of Baptist Theological Thought during the Nineteenth Century" is not by any means a case of *lucus a non lucendo*. It means a great deal to say that whereas, formerly, "a crass verbal theory of inspiration" prevailed, now the authority of the Scriptures rests on men's consciousness of their fitness to be the words of God. It is less certain that the dissipation of the historical Jesus into an æonian Christ is a real gain. The statistics of denominational growth are such as may well flatter denominational pride.

—The manner of publishing the historical manuscripts in the possession of the State of New York is open to criticism. There is a "State Historian," appointed by the Governor, and at present Mr. Hugh Hastings is in office. Under his charge have been issued three volumes of the Public Papers of George Clinton, and a fourth volume is almost ready for distribution. Such a collection of papers appeals to the student of history, and all that is required is an accurate transcript of the original, with such notes, indexes, and cross-references as may assist him to obtain a general knowledge of their contents. Editorial comment or criticism is out of place, and the methods of "journalism" are as unsuited to the dignity of the subject as they are ruffling to the reader. Unfortunately, Mr. Hastings shows neither a natural nor a trained aptitude for his work, and is flippant and ignorant. The volumes are showy in general make-up, and the text may be correct, for we have no means of testing the reproduction. The language of the editor might easily be improved, and the change would be welcome. Why should the "young State" have just begun to "keep house"? This easy tone is, however, not equal to the "head-lines" which grace the documents themselves. "Clinton looking after his Frontier," "Clinton spurs up Livingston," "Clinton displays good judgment," "Schuyler can be depended upon," "A Difference over Horses," "Everything serene at West Point," "The Situation by no means rosy," are some of the captions to letters taken at random from vol. iii. Other letters are described as caustic, gossipy, eloquent, alarming, and as "displaying humility." A colonel "hobnobs" with Tories, the Continental currency "deteriorates," and Albany is "sure enough alarmed." These choice bits are enough to show that the exuberance of the editor should be checked, for if allowed free play it may make the office and its work ridiculous.

—The Asiatic Society of Japan held two meetings last year, and volume xxviii. of its transactions is a thin pamphlet of but 58 pages of literary matter. Mr. W. G. Aston furnishes a Korean folk-tale, the first ever read before the Society. Though set in the peninsular kingdom, and possessing some local color of Korean manners and customs, the *märchen* borrows almost all its supernatural machinery from the vulgar Chinese mythology known as Taoism. The dragon king, the jade emperor, the usual remarkable eggs and pigs, the thunder-god, the moon-palace, the yellow dragon and the serpent are all here; and the scholar, who is the hero of the story, is last seen playing goban under a fir tree in the mountain with some priests, by the Korean Rip Van Winkle. There is also a collection of six Japan-

ese *märchen* from that famous collection known in Japan as the 'Uji Shui Monogatari,' written over eight centuries ago, and here well reproduced. Mr. R. J. Kirby translates from Dazai, the well-known Japanese author of the seventeenth century, a paper on Japanese music, which is not technical, but rather descriptive and psychological. It gives a Japanese scholar's opinion as to the general cultural value of the various sorts of music, with historical notes on the origin of the different styles in vogue in Japan. It is interesting to see what particular instrument was enjoyed by the noted heroes whose names are becoming familiar even in the West. Thus, Nitta played the flute and Kusunoki the biwa, and both were far from being mean players. In ancient times "any person making an immoral song was punished by death." As with the case of our own songs and tunes, many compositions which, when first written, were select and even classic, have become very popular, not to say vulgar, and in their rendition take on the form and color best suited to the audience at hand; they may be refining or obscene. This paper goes admirably with previous articles in the Transactions dealing with the more technical side of Japanese music. The Society has met with a loss —rather, bereavement—by the transfer of Sir Ernest Satow from Tokio to Peking.

DOWDEN'S ANGLICAN AND PURITAN.

Puritan and Anglican: Studies in Literature. By Edward Dowden. Henry Holt & Co. 1901.

In a letter to the present reviewer, which he makes free to cite, Mr. Leslie Stephen once remarked certain striking similarities between the intellectual movements of the seventeenth century in England and those of our own times. Writing of the various issues which derived from the fusion of polity and theology, and from the impact of rationalism upon mysticism, he continued: "In my youth I saw a very similar phenomenon. F. D. Maurice was the analogue of the Platonists —Darwin stood for Hobbes; and young men of my time tried to escape by the help of Maurice from the scientific rationalism which would tend to Colenso in criticism, and perhaps to materialism in science." This sentence, which is reproduced here with due apology to Mr. Stephen, suggests that chief charm of the seventeenth century which has made it so powerfully attractive to many. It was the typical transition period and seed-time of ideas; and in the early germifications there were many dim foreshadowings of final forms. We can compare, not too fancifully, not only Hobbes with Darwin, but More with Coleridge, Vaughan with Wordsworth, Herbert with Keble, Crashaw with Shelley, Cleveland with Byron, Tillotson with Martineau, and so on to weariness. Despite its curious learning, its quaintnesses and crudities, notwithstanding its atrabilious superstition, rebellion, and schism, there runs throughout that century a strange and subtle modernity.

All this impresses one continually in reading Professor Dowden's 'Puritan and Anglican.' Hence it is, that while the book is not likely to bulk very large in the estimation of that "numerous monstrosity" the novel-reading public, to the true lover of English seventeenth-century literature it is an event. The volume is not of the sort which one worthy of that century styled "impertinencies in folio." It makes no pretence to being a systematic history of anything; there is not even any real effort for chronological sequence in the ordonnance of the chapters. Professor Dowden, as he states in his preface, has aimed simply to please himself by bringing together studies of certain writers with whom he has dwelt long and intimately. But the result has been a notable series of appreciations bound together by a vital unity of subject and interest.

He has desired to be, for the most part, the interpreter rather than the judge of his men. There are many just estimates in passing and a few summary judicial opinions, but the total impression we receive from the method of treatment is that of depersonalization and adroit self-effacement. The principal means to this end has been the careful use of characteristic words and phrases from the pages of his authors, by which Professor Dowden has imparted to his own page a pervasive touch of their quality. It should be added, however, that while the style is, in a sense, learned, it never savors of the ink-horn so strongly as do certain passages in the work of our recent historian of criticism. Nor are there many traces in it of the floribund imagination which induced that "humorous kind of jester," Mark Twain, to liken the procession of plumed paragraphs in the 'Life of Shelley' to a literary cake-walk.

In so far as the present volume deals with a single subject, the subject is Puritanism, as it is expressed fully and directly in Milton, Baxter, and Bunyan, or as it partially and indirectly affects the work of Browne, Herbert, Vaughan, Taylor, and Butler. As has so often been the case with English criticism, from Johnson to Matthew Arnold, Professor Dowden is here preoccupied with that branch of literature which lies nearest divinity. He gives less attention than is usual with him to such purely artistic matters as form and structure; and for the purely artistic virtues of Cavalier lyrists and satirists he has no space at all. But it is by reason of this limitation of the field, one thinks, that we have such a wholly admirable introductory chapter upon "Puritanism and English Literature." It sometimes seems that America has been better able than England to recognize and value the ideal theory and poetic passion which lay at the root of the Puritan character. Whether this is due to the greater simplicity and persistence of the Puritan tradition in this country, or to the half-wilful misunderstandings of such critics as Johnson, Macaulay, and Arnold, does not concern us here. But, in view of the fact, it is pleasant to note the publication within the year of two studies of the essentials of Puritanism, the work of a writer of repute, from either side of the sea, yet strikingly harmonious in their conclusions. We refer to Dr. Eggleston's 'Transit of Civilization' and the work now under review—two volumes which may be read together very profitably.

Though in no sense partisan, Professor Dowden's general discussion of Puritanism is unusually sympathetic. He lays rather unwonted emphasis on the delicacy, refinement, and humanity of the true Puritan gentleman, and adduces instances of the warmth of his domestic affections. He is at some pains to show clearly how the dangerous Puritanic tendency to abstract from objective reality was balanced and counteracted by a very lively interest in the civil polity of this sublunary sphere, and how all this was friendly to the rise of science which made the last quarter of the century memorable. Finally, he has outlined with convincing precision the part played by Puritan doctrine and character in the larger development of English literature. To put it in a sentence: Puritanism has made for the highest poetic idealism. As he pregnantly remarks: "For the maintenance of high passion the habit of moral restraint is in the long run more favorable than the habit of moral relaxation."

The first of the biographical studies is an essay on Sir Thomas Browne worthy to stand beside Walter Pater's intimate appreciation of that old-time humanist. Him our author conceives to have been in some sense the Hawthorne of English Puritanism; one in whose imagination the intense spiritual truths of Puritanism took vital and coherent form. In the following sentences we have but to substitute Salem for Norwich, and the criticism becomes convertible: "To explode a vulgar delusion was only to open an avenue for some finer apparition of the Marvellous. His imaginative faith discovered under every roof of Norwich and in his own soul mysteries more moving than the legends of the basilisk, the phœnix, and the mandrake." This is an exact characterization of certain definite aspects of Browne's supernaturalism. In his more general meditations upon mortality and the "dormitories of the dead" he comes to a kind of quasi-scientific or cosmic sentiment of mystery which reminds one more of De Quincey or Richter than of Hawthorne. So it is with Vaughan, when he feels "silence and stealth of days" flowing through him; and so it is with Milton and Culverwell and many more, when they turn the Cartesian notion of light inherent in the atoms of the cosmos into that highly poetical conception of primeval light. This is generally stated by Dowden in an excellent paragraph which will bear quotation:

"Even in the nineteenth century, the mystic and the man of science may be united; matter may disappear in force or in motion, and the scientific intellect may lose itself in the darkness or in the light of the unknown cause of motion. In Browne's day, with cruder conceptions of science, and a mysticism more emotional and imaginative, the combination had a shimmer of color and of fantastic strangeness that has passed away."

But when all is said, one feels that Browne's was a character which would not be exhausted by a score of appreciations. It is a peculiarity of the true humanistic temperament that it eludes analysis surprisingly. Perhaps the worthy Doctor said the last word about himself when he affirmed that he was "of a constitution so general that it consorts and sympathizeth with all things."

We have expatiated too much on Browne to take extended account now of the essays on the other worthies mentioned above. The account of Baxter, and the extraordinarily sympathetic criticism of Milton's pamphlets on divorce, are particularly interesting and satisfactory. But in passing we are moved to enter a protest against what seems the excessive depreciation of Crashaw's poetry. In distinguishing Crashaw's work from Vaughan's as the "mysticism of flame" from "the mysticism of light," Professor Dowden has hit upon a very suggestive formula. But later he says in final summary: "Where

Herbert could be content with a field daisy for an offering, Crashaw must fasten with wire to his Magdalen or his virgin a brilliant basketful of roses in colored muslin." Here the quest of the image has surely led him astray from the path of just criticism. No one will deny that Crashaw loved conceits unwisely, or that his peculiarly sensuous mysticism, not saved by humor, is sometimes a little mawkish. Once in a while, indeed, he is delivered of a line that would have delighted the heart of Martinus Scribblerus, who wrought the great work 'Περὶ Βαθους, On the Art of Sinking in Poetry.' But when all possible detraction is made, the fact remains that Crashaw had the vision and the voice of a great lyric poet. To conclude an appreciation of him with the above image, and with talk about "every paltry bead and spangle of cheap religious merchandise," and to say, "his converted muse still loves the earrings, the crisping pins, and the pots of rouge," is to convey a wrong impression to the confiding reader.

But such traces of the earlier manner of the biographer of Shelley and the sonneteer of Mona Lisa are far from frequent. The work as a whole is as full of ripe judgment as it is of sound learning; and it is pervaded withal by a vivid personal enthusiasm which makes it delightful reading.

WILLOUGHBY'S SOCIAL JUSTICE.

Social Justice. By Westel Woodbury Willoughby. Macmillan Co. 1900.

We may regard this work from two points of view. As a contribution to the history of social and political philosophy it has decided merit. The leading ethical theories are examined critically, and the examination is rendered much more satisfactory by the presentation of these theories in the words of their authors. The criticism, although not original nor, in our judgment, altogether thorough, is dispassionate and judicious. The author evidently means to state the theories to which he is opposed with fairness, and to present those which he favors with moderation. He informs us that he was moved to produce this book by the desire to relieve the increasing and alarming discontent with the present institutions of government. He quotes with approbation, as expressing his own views, the following extract from Professor Foxwell's introduction to Menger's "Recht auf vollen Arbeitsertrag":

"The whole aim and object of economic policy and legislation, the trend of all movements for social reform, revolutionary or progressive, must depend upon the prevailing sense of ideal right, upon the notions of justness and fairness, more or less coherent, which recommend themselves to the governing body of opinion at any time as axiomatic and unquestionable. . . . It is hardly too much to say that in the gradual development of these ideals of right, and the relation between their development and the development of positive institutions, we have the key to social stability. That form of society is most surely rooted in which these movements are fairly concurrent, in whose legal structure and economic relations the prevailing notions of equity or axioms of justice are most faithfully mirrored; and where they are carried out in similar degree in all the various sides of social life."

These movements, our author holds, are not now fairly concurrent. There are many discrepancies between the ethical ideals now prevailing and the present social and economic conditions. There is a startling contrast between the political and the economic development of modern societies. Ultimate political power has been diffused at the same time that tradition and dogmatic religion have lost their former controlling force. Individual reason has been recognized as the true judge of right and wrong; the principle of freedom has supplanted that of authority. The equality of men is accepted political doctrine; their social condition exhibits the extreme of inequality. The social reformer may well undertake the task of warning "those who might be tempted to ill-advised innovations, and of pointing out the directions along which the economic and ethical education of the people must proceed."

We cannot regard this task as successfully performed by the present writer. For, looking at his book from a second point of view, it is a mere restatement of the theory of the divine right of rulers. To suppose that popular discontent can be appeased by the maxims of authority, is to repeat a time-worn mistake. To believe that the feeling of injustice can be removed by teaching that the powers that be are wiser and better than their miserable subjects, is as idle as to expect to remove skepticism by compelling children to learn the Westminster catechism. We gain nothing by blinking the facts that great masses of the common people are, to say the least, not religious, while many educated men are agnostics. To say to them that they cannot do right unless they test their actions by principles of morality "flowing from the essential character of the Divine Reason," or unless they strive to attain to a "likeness unto the true God," is vain babbling. Not only highly educated men, but very moderately educated men, will simply not listen to teachers who assume to voice the commands of the Almighty. Whether they believe in the existence of a God or not, they do not propose to submit the righteousness of their acts to any tests which any of their fellows declare to be valid because they emanate from Deity. So far as they have a creed, their conception of the true God requires that he should be impartial in his revelation of himself, and they know not where to seek him except in their own consciences. If they find there principles of morality which others describe as flowing from the essential character of the Divine Reason, well and good; but the conscience of the individual is the supreme tribunal. Galileo submitted to the authority of the Church; but the spectacle of Huxley admonished by an English bishop to attain a likeness to the true God would move the modern world to laughter.

Our author appears to suppose that he maintains the modern principle of freedom, as contrasted with the mediæval principle of authority. Some of his statements, it is true, support this claim. He admits that the State is not a moral entity; that it has no conscience. Morality applies only to human individuals. The State can neither determine the morality of an act nor limit the moral freedom of the individual. It is unrelated to any superior being, and has no concrete existence apart from the individual beings of whom it is composed. Nothing could be more satisfactory than this; but the book is full of statements that are inconsistent with it. If the State has no moral responsibility, it can have no rights; but the author explains the right of the State to be, and discusses the morality of its commands, and the character and motives of its acts. In fact, it is impossible to adopt the paternal theory of government without somewhere slipping in the assumption of the superior wisdom of those in authority. This assumption is disclosed in the statement of the author's view of toleration.

"If we are firmly convinced, for example, that the failure to accept a certain doctrine will doom the recusant to an eternity of awful torment, and if we are equally sure that coercion will be able to secure the saving acceptance, and without causing an amount of suffering anywhere near as great as that from which the coerced one is to be rescued, can we hesitate to declare that such coercion should be applied?"

Torquemada himself could not have bettered this, and, indeed, it is almost a reproduction of the arguments by which Philip II. justified his dealings in the Low Countries. To be sure, we are cautioned that before engaging in persecution we must be convinced that we are right, and must carefully have considered the effects of our action. But no zealot has any difficulty in complying with these conditions.

We may remark that in this passage, by introducing the concept of suffering, the author lapses into the utilitarianism which he has most laboriously and, in general, successfully criticised. But the significance of the passage lies in the assumption that when A is "firmly convinced" that B ought to do something, it is right to compel him to do it. There is no distinction here between private and public morality. All the talk about the "realization of the highest ethical self" only befogs the true issue, which is, Who is to decide what B ought to do? Of course, A holds that he is wiser and better than B, and it is easy to construct a theory of justice which is quite satisfactory to A's conscience. But it may be altogether unsatisfactory to B, who is firmly convinced that he is quite as wise as A. Under these circumstances the theory of justice here expounded is reduced to that of the trial by wager of battle, which our ancestors considered to be authorized by the example of David's duel with Goliath.

It is easy to see what the common people, and especially what "inferior" races, have to expect when this theory is applied, and we need not be surprised that this author assures us that it lies within the legitimate province of an enlightened nation to compel the less civilized races to enter into a better life. Of course, he says that this is true only if compulsion be the only or the best means available; but equally, of course, the enlightened nation is to be the judge of this. The present moment is not opportune for the reassertion of this doctrine. In view of the hideous cruelties which the Christian forces have so lately inflicted on the miserable Chinese—atrocities encouraged by the German Emperor, and defended by the German Government when the letters describing them were read in Parliament—it will seem to many that there must be something wrong with a theory under which such proceedings are justified. Nevertheless, this author explicitly approves the doctrine that the civilized states may justly attack "insufficiently organized populations" at their discretion; and that it is the "great world duty" of the Teutonic states to engage in this benevolent work. We are sorry to say that we cannot now characterize such doctrines as infamous; but we do not hesitate to declare that if civilization is to be extended, they will hereafter be so characterized. Even

at the present day they are very far from being calculated to allay the discontent of the millions and hundreds of millions of the common people who are groaning under the burdens which their rulers, with every profession of benevolence, are heaping upon them. If an increase of these outrageous exactions is all that is offered under the name of "social justice," the forces of revolution will continue to wax portentous.

The Hall of Fame. By Henry Mitchell MacCracken. G. P. Putnam's Sons. 1901.

For many reasons, a statement of facts concerning the "Hall of Fame" is appropriate. Such an institution is *sui generis*; Westminster Abbey stands in a very different class. This book supplies some of the information needed. It is "the official book authorized by the New York University Senate as a statement of the origin and constitution of the Hall of Fame, and of its history up to the close of the year 1900." Posterity will learn, not without amazement, that its inception was "due in considerable part to hard facts of physical geography." The University desired to arrange its buildings around a quadrangle, but the west side of the quadrangle fell on a very steep slope. To present an ornamental effect,

"a broad terrace was suggested, to be supported upon granite walls, and crowned by a colonnade. . . . The argument for this structure upon the ground of beauty was very strong, yet was hardly sufficient by itself to justify a university of comparatively small resources in possessing so costly an ornament. . . . It was felt by the Chancellor that an educational use must also be found for such an edifice. To fulfil this condition, there came to him the idea of 'The Hall of Fame for Great Americans.'"

It remained only for a generous friend of the University to furnish the money, and the idea became a reality.

We must confess that this account reminds us of Artemus Ward's explanation of Gen. Lee's participation in the Rebellion: He had a large stock of military clothes on hand, which he could not afford to waste. Had the western slope of the grounds of the University of the City of New York not been so steep, the idea of a Hall of Fame might never have occurred to the Chancellor. But we do not refer to this circumstance in any spirit of disparagement. The enterprise was regarded by the public as interesting, and every one invited to participate in it showed the greatest good humor, and accepted whatever part was assigned him in a very accommodating way. The most valuable discoveries have been made by accident, and no one thinks less of them on that account. We have seen within a few years several universities constructed, all complete, at the fiat of rich men; and if any one may say: "Go to! I will make a University," we do not know why he should not say the like of a Hall of Fame.

So much would be true were this Hall a peculiar possession of the New York University. The selection of names would then be as much the province of the rulers of that institution as the selection of books for its library. The principles of classification, the qualifications of electors, the appointment of judges, would be matters which outsiders could not criticise with propriety. But as it has been decided to appeal "to the general judgment of the nation," we are justified in commenting on the methods that have been pursued with the same freedom as in the case of any public measure. When we examine the constitution of the enterprise we find that the ultimate seat of power is in the Senate of the University of New York. The reason assigned for this is that it is "according to the contract" with the giver of the funds, a contract which the Senate has no power to modify. The Senate is a body of nineteen members. The Chancellor of the University is its chairman, and its other members are the deans and senior professors of the six University schools, together with representatives of the six great theological schools in or near New York, the method of selecting whom is not disclosed. This Senate is supposed to have selected one hundred electors, or judges, who pass upon nominations. The Senate, however, may increase the number of electors at its pleasure, and may change the constitution without notice to any one. Thus, the constitution provided that a name might be inscribed when approved by a majority of the electors voting; but the Senate decided that it would require a majority of the whole college. Moreover, a majority of the Senate may veto any nomination made by the electors; nor is any name submitted to the electors without the approval of some member of the Senate. The whole body of American citizens may nominate candidates, but their voices may or may not receive attention. In the selection of 1900 the Senate decided to allow the electors to consider the one hundred names that had the largest popular support; but it added one hundred names to the list of its own motion, and directed the electors to report additional names if they were so disposed. When we consider that the Senate appoints the electors and may increase their number, it is evident that its power is practically absolute. The popular suffrage and the electoral college may be "dignified" features, as Bagehot would say, but they could be abolished without affecting the working of the constitution.

When we consider the manner in which the nineteen gentlemen who are to select our national heroes for us have discharged this function, we are inclined to question their competency. In the first place, their choice of electors is, to say the least, unscientific. The Chief Justice of Utah or of Montana may be a good lawyer, but his qualifications as a judge of what constitutes fame are not of national notoriety. Nevertheless, twenty-three such functionaries are in the electoral college. College presidents and professors may be presumptively qualified, but it is doubtful if they represent popular sentiment. Professors of history should tell us the names of those who have done most for our country, but they would frequently be names unknown to the public. "Publicists, editors, and authors" could probably say what names are best known to the people, but they are so numerous a class as to make the task of selection from their number itself not only difficult, but also invidious. Upon the whole, when we read that a school-girl sent in a list of fifty names, twenty-seven of which were among the twenty-nine finally selected, we incline to think that the result might be as satisfactory if this intelligent young person were put in complete charge of the entire business.

Still less scientific is the system of classification adopted by the Senate. The accident of foreign birth excludes men like Alexander Hamilton, who are Americans of world-wide fame. There is a book entitled 'The Hundred Boston Orators,' but no orators are recognized in "The Hall of Fame for Great Americans." Wendell Phillips had some reputation for oratory, but those who desired to nominate him for this Pantheon had to call him an "author or editor." William Lloyd Garrison was distinguished preëminently as a philanthropist and reformer, but he seems not to have been thought of in that capacity. His fame as an editor caused him to be classed among "authors and editors," which brought him into competition with authors. Horace Greeley had to undergo the same ordeal, and in consequence he, like Phillips and Garrison, is excluded. To class editors and authors together, however, is no more absurd than the combination of "missionaries and explorers," and not much less so than that of "preachers and theologians," or "musicians, painters, and sculptors." Daniel Boone, Sam Houston, and John C. Frémont might well be surprised at finding themselves in rivalry with Adoniram Judson. No musician lays claim to eminence, no sculptor is selected, and only one painter. The list includes no business man, no missionary, no explorer, no engineer, no architect, no physician, no surgeon. Audubon and Asa Gray are the only names chosen for eminence in the scientific world.

In placing the tablets, "corners" were assigned to authors, teachers, inventors, statesmen, jurists, and soldiers, and then the Senate's capacity for discrimination was exhausted. Not willing to fall back on the legal *et al.*, it lumped the heroes who had no corners in a seventh class, under the title "Septimi." This is rather worse than Virgil's *Fortemque Gyan, fortemque Cloanthum*, and shows a poverty of imagination which, to say the least, detracts from the dignity of the undertaking.

The Siege of Kumassi. By Lady Hodgson. Longmans, Green & Co. 1901. Pp. 366, 8vo. Illustrations, map, and plan.

Lady Hodgson's narrative of her remarkable experiences in West Africa includes more than the title of her book would imply. She tells the story not only of the two months' siege of Kumassi, but also of the perilous flight through the forest, and closes with some bright chapters descriptive of life on the Gold Coast. Although she makes no pretence of writing more than a simple account of what she saw and endured, and does not enter into the large questions involved in the Ashanti uprising, incidentally she throws much light upon the condition of the people and gives many graphic word-pictures of significant men and scenes. The strong impression left by her book is of the advance especially in the intelligence of the negro. When the Governor's party entered Kumassi, a place from which the traces of the human sacrifices which had made it the foulest spot on earth had not yet disappeared, one of the features of the welcome was the singing by the school-children of "God Save the Queen!" The disloyal chiefs chose last summer for their desperate attempt to shake off the British yoke under which slavery and fetish sacrifices were prohibited, because, so it was argued in their council, the South African war would prevent the

British soldiers from coming to the relief of the beleaguered garrison. And Sir James Willcocks, the commander of the rescuing column, says of the skilfully constructed rebel stockades and shelter pits that they "were probably made from newspaper descriptions of the Boer trenches read by the Fanti scholars in the English newspapers."

Not less symptomatic and hopeful as an indication of progress were the courage and loyalty displayed by the black soldiers, to which this writer gives frequent and emphatic testimony. Their unwavering obedience and constant cheerfulness during months of terrible privations, and amid incessant attacks by a foe vastly outnumbering them and famed for his valor and cruelty, reveal a strength in the African character full of promise for the future of the country. The same steadfastness was shown by those chiefs and their 3,000 followers who, resisting every temptation to go over to the rebels, shared the perils and sufferings of the siege with the Hausa garrison. When the fierce stress of hunger had driven some to madness and had slain others, it was some of the women and children, not the men, who, "preferring slavery with food to liberty with starvation," deserted to the enemy. The exhaustion of their supplies determined the Governor, Sir Frederic Hodgson, to endeavor to break through the Ashanti lines with the greater part of his force and all the non-combatants. How desperate he regarded the attempt is shown by his last words to the two British officers who with 150 men were left in the fort: "Well, you have a supply of food for twenty-three days and are safe for that period, but we are going to die to-day." The seven days' march, after the first stockade was carried, with its almost continuous fighting to the frontier of Ashanti, was an experience more awful, says Lady Hodgson, than that of the siege. A great part of the way was by a path so narrow as to compel the fugitives to go in single file, momentarily expectant of the report of the guns which alone revealed the presence of the enemy in the dense forest that hemmed them in.

There was an added danger in some districts through which they passed in that "the way was pitted with gold holes—great yawning caverns, to fall down which would be almost certain death. They zigzagged on either side of the narrow path." From these pits gold in great abundance is taken, "nuggets worth £100 not being rare," and even a bucketful of the road-scrapings of the main street of Axim was shown to contain a shilling's worth of gold in half-an-hour's sifting and washing in Lady Hodgson's presence.

"Every Ashanti king and chief is the possessor of gold ornaments, and the regalia attached to each tribal stool is very valuable; even the handles of the swords of office are covered with beaten gold, affixed with gold rivets. The heads of the state umbrellas are generally covered with beaten gold; and one which I saw, in the shape of a large bird with its head turned round and pecking its tail, must have been covered with at least £15 worth of beaten gold. One of the ornaments of the loyal King of Aguna was a solid gold bracelet, which he valued at £50."

Little has been done by Europeans to develop this extraordinary wealth—"almost everywhere gold exists"; but with peace assured and the building of the projected railways, numerous mining enterprises are certain in the near future. Some lively descriptions of the natives of the coast towns, especially of the servants, lighten the inevitable gloom characterizing the greater part of this interesting book. It is attractively made, with numerous illustrations of native life and the scenery of West Africa.

An Essay on Western Civilization in its Economic Aspects (Mediæval and Modern Times). By W. Cunningham, D.D., Fellow and Lecturer of Trinity College and Vicar of Great St. Mary's, Cambridge. Cambridge (Eng.): University Press; New York: Macmillan. 1900. Pp. xii, 300.

When Dr. Cunningham visited this country a couple of years ago, to take part for a few months in the teaching work of Harvard University and of the University of Wisconsin, he presented to the astonished gaze of his new American friends a type of activity quite unknown, one might venture to say, on this side of the water. It was that of the academic parson, such as is now not infrequently produced by the modern conditions of Cambridge and Oxford life. Oxford and Cambridge were both of them, fifty years ago, a good deal too clerical, there can be no doubt; and a vast amount of excellent ability was wasted or misdirected by clericalist prepossessions. But now that fellowships have been thrown open, and all the characteristically modern studies, from biology to engineering, have obtained a secure lodgment and are represented by dozens of teachers who are anything but clerically minded, the unwholesome temptations of the era before reform have been almost entirely removed. If a young don feels sufficiently interested in the work of the Christian ministry on the one side, and in some non-theological study on the other, to desire to divide his life between them, there is nothing to hinder him. He may find that success in his non-clerical work helps him in his ecclesiastical career, and, as the English Church is at present constituted, it is well that it should; he will not find that his clerical character helps him appreciably to a teaching position. The measure of success he obtains in his dual life will depend on his own qualities of head and heart.

Dr. Cunningham, at any rate, has been able to combine the duties of the Vicar of Great St. Mary's—a church which, though its own parochial area is small, occupies a position of unique importance in the academic life of Cambridge—with the assiduous studies which have produced the two portly and learned volumes on 'English Industry and Commerce,' and the zealous and sympathetic teaching which has done so much for historical studies at his university, and stimulated more than one of his pupils to remarkably excellent pieces of original investigation. This is a result of which one might justly be proud; it witnesses to an extraordinary mental alertness which most of us must admire and envy.

And in this case the combination of characters has had one consequence on which the present volume calls upon us to comment. Most teachers of economics keep their political economy and their religion in separate mental compartments; nor would the mere performance of clerical functions, of itself, bring the two into contact: it is only too possible to put the Christian creed on with the surplice and take off both together. But with Dr. Cunningham the case has been otherwise. One cannot fail to see that here the union of clerical and scientific functions has had an influence on the discharge of both. At the back of all the details of industrial and commercial effort one cannot help feeling that there is, in his mind, the ever-present question of ultimate meaning and purpose. What does all this pursuit of material gain mean for human character? What relation has wealth to what saints and philosophers have told us of the ends of human existence? This note of the theologian is seldom forced: where ecclesiastical prejudices may perhaps seem to have led him to some exaggeration, as, *e. g.*, in the influence he assigns to the mediæval Church, the soundest historical judgment is on his side. He has a marvellous acquaintance with the actual facts of economic life in all ages; though the Middle Ages are those he knows best, he has a wide knowledge of present business conditions and a considerable acquaintance with recent economic literature. For fifty pages at a time his books may be read without any thought save of the actual sequence of events; but all at once the attentive reader will find himself brought up against one of those far-reaching generalizations which show that the moralist has been all the time watching the procession and pondering what it all meant. To discuss these generalizations in this place would demand more space than we have at our disposal; and, indeed, they would confront us with those ultimate problems which cannot be answered off-hand, if they can be answered at all. For what Lord Acton has said of history in general is true of economic history: what a man really thinks of history is his real religion. But it is surely desirable that students should sometimes stop to think about these larger issues; and if university studies are not liberal enough to find room for such books as Dr. Cunningham's by the side of treatises on Marginal Utility and the Statistical Abstract, it is the worse for the university.

The present 'Essay' is a survey of mediæval and modern progress in its economic aspects, forming a sequel to an earlier volume on "Ancient Times"; it reproduces the substance of its author's lectures in America, and it is fittingly dedicated to President Eliot. Like all Dr. Cunningham's writings, it is full of information and fuller still of suggestion. Of course there are many points on which it is open to criticism. It is permissible to doubt whether "the phase of Nationalist economic policy was chiefly concerned with the development of land" (p. 16); whether "household" (p. 54) is the best word for the English manorial system or the functions of the modern English squire, and whether too independent a life is not assigned to a mere "organ"; whether "the worship of the Roman Emperor was the worship of arbitrary human will" (p. 72); whether there were no "oligarchies" in English towns till the fourteenth century (p. 94); whether the economic influence of the Humanists (p. 145) is not underrated; or whether full justice is rendered to Colbert (p. 213). And we should like to hear what Dr. Cunningham would say to the ordinary Protectionist argument that England was enabled to adopt Free Trade by its previous and long-continued development under a Protectionist régime. But most of these are matters for class discussion; and this suggests a final remark. The book, it is to be feared,

is not one for ordinary undergraduates—even juniors and seniors. It must be confessed, regretfully, that they have seldom that liberal knowledge of the world's history and literature which they will need for its full understanding. But we can hardly imagine any course of intellectual discipline, for such students as are prepared to tackle it, more stimulating and educational than the steady working through, in a small class or seminary, of a book like this; looking up its references, repairing its omissions, questioning its judgments, and sometimes, perhaps, giving a little thought even to its largest generalizations.

Verbeck of Japan. By William Elliot Griffis. Fleming H. Revell Co. Pp. 376.

By the addition of this volume to his biographies of Commodore Perry and Townsend Harris, Dr. Griffis completes his record of the foundation of modern Japan. The pioneer of higher education deserves no less honor than the sailor or the diplomatist, especially when, as in this case, he helps to mould the character of the statesmen who guide a young nation through a period of dangerous transition. It would scarcely be a misuse of language to say that Verbeck was an exemplary patriot, although, as the sub-title reminds us, he was "a citizen of no country." Born in the Netherlands in 1830, he forfeited his Dutch nationality by his emigration to America in 1852. When appointed by the Dutch Reformed Church as a missionary to Japan, he had not lived long enough in the United States to be naturalized here. To the country of his adoption, however, he rendered such services as eclipse, in their real value, those of many who have gained a greater share of public attention. His first ten years in Japan were spent in quiet preparatory work in Nagasaki. The laws of the country did not as yet permit open evangelism. The revolution called him to Tokio, whither some of his pupils had preceded him with a good account of his teaching. Here he was occupied for his second decade in tasks of great responsibility and delicacy. He stood, in fact, to the new Government in the position that was afterwards filled by a large corps of expert advisers. His principal duty was the establishment and direction of a school for the Western languages and sciences, which developed in a few years into the Imperial University. But he was engaged in many subsidiary labors. It was Verbeck, for instance, who translated into Japanese the leading text-books of the law of civilized nations, thus planting a seed from which grew the Constitution granted by the Mikádo in 1889. It was he, too, who suggested and organized the famous embassy to America and Europe in 1872, the inner history of which is related at length in this volume. It seems, indeed, that during his tenure of office scarcely an important step was taken in relation to the outside world without his advice being sought. As soon as the restrictions on direct missionary work were removed, he gladly seized the opportunity to devote his main energies to the foundation of Christian churches, for the evangelistic impulse was always stronger in him than any other. His connection with the Government service came to an end in 1877, when the Emperor decorated him with the Order of the Rising Sun. From this date until his death in 1898 he spent most of his time in preaching tours and in Bible translation. His diligence, his generosity, his learning, his power of initiative, and other high qualities are evident from this biography, in which Dr. Griffis has paid an enduring tribute to the memory of his friend.

We have noted an occasional carelessness of style—as in the sentence, "Since 1862, this lordly mansion has been possessed by the late Mr. C. B. Labouchere"—and the narrative suffers, perhaps, at times from an excess of exposition; but, on the whole, the author is to be heartily commended for his latest contribution to the cause with which his own name is so closely associated.

A History of Rome. By George Willis Botsford, Instructor in the History of Greece and Rome in Harvard University. The Macmillan Co.

Dr. Botsford has written for use in high schools and academies a History of Rome which the mature reader, his school-days long in the past, may well follow with intense interest. The style is clear and attractive, the illustrations are numerous and intelligently selected. In 350 pages the author covers the ground from the mythical period to the age of Charlemagne. A wide knowledge of the original authorities is everywhere apparent, both in marginal references and in quotations. Perhaps the "everywhere" needs qualification for the last hundred pages, where such names as Hodgkin, Bury, Oman, Gibbon, Freeman, and Emerton are much more frequent in the margin than names of contemporary writers.

The high merit of the book as regards accurate scholarship and attractiveness to the reader may be at once admitted, as was to be expected from the author's 'History of Greece.' There are many points, however, at which his mental attitude towards his subject is open to question. Present-day scholarship is practically unanimous in allowing that Tiberius was not the monster he was once supposed to have been; that there is no valid basis upon which to hold Nero guilty of the burning of Rome; and that many other sins have been erroneously placed to the charge of Roman Emperors. It may be admitted, also, that the sins of the Roman Republic in its latter days were many and great. There is hardly sufficient warrant, however, for giving the early Emperors as clean a bill of moral and political health as Dr. Botsford makes out; nor can the later Republic be given up as utterly bankrupt in political sanity and common honesty. It is true enough that the Republic scored a bad failure in provincial administration, and that the Empire brought to the provinces a very substantial improvement. We cannot but feel, however, that a due recognition of actually recorded exceptions on either side would leave the contrast rather less vivid than it is painted in the book before us. It cannot rightly be said that Tacitus "utterly ignored the blessings the imperial government had brought the provinces." If he does not anywhere make a direct comparison favorable to the Empire, it may at least be said that the instances of wise and humane treatment which he records, with expressed or implied approval, are sufficient to refute such a charge. One might retort, too, that Dr. Botsford comes perilously near complete neglect to admit any degree whatever of dishonesty or oppression in the provinces under the Empire. Nor is this the only point in which Tacitus receives less than his due credit. The statement that "Rome was everything to him; and, within this little world, the aristocrats alone were worthy of his sympathy," will not bear the test of a careful study of his own works. He and the circle to which he belonged "were out of joint with the times, and blocked the way of progress," in Dr. Botsford's view. One more instance, here, of the truth that some men are so slow to learn, that if you do not happen to agree with a career of imperialism, the proper thing to do is to keep still and not block the way of progress.

Of course, Julius Cæsar comes in for high praises—only less exalted than those of Marion Crawford in his 'Ave Roma Immortalis,' in whose view Brutus "blackened the name of friendship with a stain that will outlast time, and by a deed second only in infamy to that of Judas Iscariot," while historians are criticised for magnifying into a crime the death of Cicero, "sacrificed to Antony's not unreasonable vengeance." Dr. Botsford allows Cicero to have been a patriot, and indulges in none of Mommsen's virulent depreciation of his powers, but evidently finds nothing in him to arouse enthusiasm. In one instance, we must take exception to the depreciation of an *imperial* character. The Empress Theodora is incidentally referred to as "once a dancing-girl of low character." The document upon which this condemnation depends is the *Anecdota* usually attributed to Procopius. It is too full of contradictions, internal and otherwise, to be taken as valid evidence against a woman not otherwise charged with the abuses which it recounts, even if the ascription to Procopius were unquestionable, which is far from being the case.

Upon the whole, while recognizing the many good and attractive features of Dr. Botsford's book, we cannot avoid the impression that it is injured throughout by an unduly high opinion of the Empire, and an equally undue depreciation of the Republican period, and of the men of the Empire who looked back with regret, not to the disorders of that period, but to its better elements.

The Works of Théophile Gautier. Translated and edited by Prof. F. C. de Sumichrast. New York: George D. Sproul. 1900.

Prior attempts at rendering into English the varied lusciousness of Gautier's style have invariably fallen short of successful achievement, not merely because the translators usually selected such parts of his work as are least publicly presentable to English readers, but also from the inadequate equipment of those who undertook the task. We may (possibly many of our staidest readers will) question the wisdom of an almost complete version of the too often unblushing "Théo"; but it may be rejoined that the capacity and academic position of Professor de Sumichrast carry all the weight of a judicial imprimatur. The publisher's share in the work is too important to be passed over lightly; in type, paper, and *format*, these volumes are simply delightful. Who may read all of them, we leave it to the mental pathologist to decide. Of the whole issue, to be completed in twenty-four octavo

volumes, six are in our hands, containing 'Mademoiselle de Maupin,' 'Les Grotesques,' 'Voyage en Espagne,' 'Le Roman de la Momie,' and a selection from 'Portraits Contemporains.' A general introductory essay discusses Gautier's principal titles to literary eminence, and each volume contains a prefatory critical notice.

These brief studies amply suffice for the general reader who is not looking for final and deep pronouncements on the quality of Gautier's art. But some difficulty may well be found in agreeing with the contention of the general prefatory essay which argues, along familiar lines, that Gautier's work is not *im*-moral, but *un*-moral. The distinction here drawn is purely scholastic; it belongs to the logomachies of the classroom of formal logic. What plain common-sense replies to the preface of 'Mademoiselle de Maupin' is that, with all its cleverness, this prolonged *boutade* is an impudently paradoxical attack on the fundamental things that render social life at all possible; its triumph would consequently involve the disappearance of those very ideas of beauty and art to which Gautier wished to consecrate his existence. Whether or not a youthful freak was too severely punished with hopeless exclusion from the respectable French Academy, still remains a matter of opinion. The introduction to 'Le Roman de la Momie' might gain from the addition of an ample paragraph pointing out how far, in this perfect reconciliation of the rival demands of erudition and fiction, its author's artistic sense surpasses that of the neighboring heavy historical school. Wise selection appears in the volume that represents 'Portraits Contemporains.' Some disappointment we must own to, on discovering, here and there, marks of the pruning-knife where there was no diseased limb. In 'Mademoiselle de Maupin,' of course, certain excisions are imperative; the wonder is that in this translation they are so few. It is chiefly to the 'Travels in Spain' that our remark applies. Allowance being made for possible differences of text, it may be noted that the account of Gautier's ascent of the Mulhacen in the Sierra Nevada—a very interesting episode—does not appear in the English version; dashes of local color such as the following are expunged: "Les malheureux chiens, qui n'ont ni souliers ni *alpargatas*, les traversent au galop et en poussant des hurlements plaintifs," which appears to be Gautier's humorous way of demonstrating how hot the pavements of Toledo streets can become under the summer sun. In the matter of illustration, the Spanish dancer (iv., 313) is indisputably too *fin de siècle* for the contents of the volume; accordion-plaited skirts, we are quite positive, were not worn by the ballet-dancers of Gautier's day.

Considering the unusual difficulties offered in vocabulary and style by the original, one cannot but congratulate the translator on the extremely idiomatic precision of his labors, without in any case shirking or forcing the meaning of the text. A good example of this may be seen in the comparison of the "transposed proverbs" of Balzac with the equivalents or substitutes offered here, literal translations being out of the question (vi., 88). There nevertheless remains room for suggestion of occasional improvement in small details. Gautier, for all his splendor of diction, never showed any hostility to colloquialism if required by the situation; and in a few of these cases the corresponding English word or phrase may well render in its pungency the original meaning. When Gautier speaks of deputies who *gâchent* laws, the word "bungle" fits the case more closely than the vague "spoil"; "rien n'est *trompeur* comme les réputations qu'on fait aux individus et aux peuples" is better conveyed through "misleading" than "deceitful"; *torréfié* is interchangeable with "torrified," still more so with "scorched"; and, as a final example, it may safely be insisted that though Molière's characters frequently seek to make game of the rights of primogeniture and testation, there is nowhere in his plays any sign of "arguments against heredity." Readers of these volumes will, however, search many pages before adding to the few above illustrations—given in no carping spirit, but with the sole view of bringing into stronger relief the excellence of execution that marks the whole work.

Fly-Rods and Fly-Tackle: Suggestions as to Manufacture and Use. By Henry P. Wells. Illustrated, revised, and enlarged edition. Harper & Brothers. 1901.

Mr. Wells has, as his first illustration, a portrait of himself, and in his introduction says: "It is to the beginner that I address myself, remembering, during my own novitiate, with what longings I sought, and how gratefully I would have received, the information contained in this book." The preface tells the reader, however, that Mr. Wells has not been able to pursue to a satisfactory ending his investigations as to "how lines, leaders, and flies appear to trout under the varying conditions of light and water which confront the angler when rod in hand." To accomplish this, Mr. Wells's plan was to procure a diver's outfit and impersonate a trout under various conditions of his sub-aqueous life, while a friend angled for him, and a stenographer on shore, by means of telephonic communication with the author, recorded his impressions. Had this project been carried out, and the results printed in the book, it would have added much to the interest of the discussion. Perhaps Mr. Wells may not have known that this experiment has been tried in a salmon river, without the diver's outfit and the stenographer, and its outcome was not thought to add anything of importance to the sum of knowledge of angling.

The first chapter, on fish-hooks, is really a scientific treatise on the subject, not only showing the forms of the many different kinds of hooks, but demonstrating their penetration, holding power, and strength. Mr. Wells decides finally in favor of the turn-down eyed hook of the Pennell pattern, though he thinks well of the Sproat and the O'Shaughnessy. The description of "How fish-hooks are made" is worth reading, though we doubt if it sets any angler to work making his own, nor is it probable that the long and minute treatise on rod-making will excite more than a passing interest in most of the readers of the book. The chapter on "leaders" contains a lot of curious information. Probably very few anglers, or laymen either, know how the gut used for casting-lines is made, and many would hesitate to say positively what part if any of the silkworm is used as the raw material. Mr. Wells tells us that when the worms cease feeding and a filament of silk hangs from the mouth, they are about to spin their cocoons. It is at this moment that the worms destined for the angler's use are dropped in a bath of vinegar, where they remain several hours, are then removed, and torn apart to get the two silk sacs. The contents of each of these, which is a viscid fluid, is stretched out by the operator to the desired length. These harden very quickly on exposure to air, and the gut is stretched on pieces of boards to dry. When dried, it is cleaned and packed for the market. Most of this gut is made in Spain; but Mr. Wells thinks there are silkworms native to this country superior for the production of gut to the Chinese article. From the cecropia, which is very common, gut has been produced "eight or nine feet long, and strong enough to hold a salmon, quite round, and all an angler could desire." It would be a great boon to salmon-fishers if some one would successfully operate a factory for the product of this insect.

"Flies and Fly-Fishing" and "Miscellaneous Suggestions" conclude the book, and offer a good many useful suggestions.

Three Plays for Puritans. By Bernard Shaw. Chicago: Herbert S. Stone & Co.

Mr. Bernard Shaw is to be read for amusement, not for instruction or profit. It is a thousand pities that a man of so much genuine literary ability, so well informed in many directions, so witty, and so conversant with the ways of the world, should be so utterly destitute of mental balance, so easily enticed into all sorts of intellectual bogs and morasses by the will o' the wisp of his own too fertile imagination. Of these three plays—it need scarcely be said that there is nothing especially puritanical about them—one, "The Devil's Disciple," is well known in this city, and has been amply discussed. For theatrical, not to speak of dramatic, purposes, it is superior to either of the other two, "Cæsar and Cleopatra" or "Captain Brassbound's Conversion," but both of these will furnish delightful entertainment for an idle hour to any one who will read them for their surface brilliancy, without trying to analyze them or discover their author's meaning. Especially must he beware, if he values his peace of mind, of attempting to reconcile them with any of the principles which Mr. Shaw lays down in his introductory essays. Prefaces and plays alike are written with delightful and sparkling fluency. There are no dull passages, and no lack of common sense, shrewd comment, sharp satire, or admirable precept; but these ingredients are scattered, like plums in a pudding, in a mass of audacious paradox, reckless generalizations from false premises or half-truths, and all sorts of humorous distortion and flagrant impossibilities. Of glittering fancy and mordant wit there is an abundance, but no more cohesion or stability than in the lightning changes of a kaleidoscope.

In "Cæsar and Cleopatra" the personages belong to modern satirical burlesque, of capital quality, while the atmosphere and coloring often convey a curiously veracious impression of Oriental antiquity. The contrast is comical, although that, of course, is not the way in which Mr. Shaw would wish to have it regarded, and if—which is exceedingly unlikely—a company of actors could be found to play it properly, with

apparent unconsciousness of the humorous side of it, the piece might make a hit upon the stage; but a merely conventional performance would probably be a dead failure. The inherent absurdities of the story of "Captain Brassbound's Conversion," which may be described, perhaps, as comic melodrama, would almost certainly be fatal to any attempt at theatrical representation.

A Notable New Novel

Our Friend the Charlatan

By GEORGE GISSING. 12mo, $1.50.

The story of the campaign of Dyce Lashmar, the vicar's son, for a place in Parliament. Lashmar is an unconscious charlatan, with a great influence over women, including old Lady Ogram, the daughter of a laundress and a plumber, who when raised to the peerage becomes an autocrat of autocrats. The book is notable for its telling character drawing and discriminating satire.

A REMARKABLE NEW WORK BY

MAURICE MAETERLINCK

The Life of the Bee. By the author of "Wisdom and Destiny," "The Treasures of the Humble," etc. Translated by Alfred Sutro. 12mo, cloth, . 1.75

This book deals with the life of the bee, treated in Maeterlinck's own peculiar vein. It is by no means technical; passages of the highest lyrical beauty abound, while reflections, analogies and poetical digressions are not wanting. It is a work of the most fascinating description, absolutely new in treatment, and provocative of deep thought.

BOOKS ON NATURE STUDY

BIRD PORTRAITS

By ERNEST SETON-THOMPSON; described by RALPH HOFFMANN. Pictures by this distinguished artist of familiar birds, printed on heavy coated paper, 8½x12 inches in size. The entertaining descriptions by Ralph Hoffmann of the Audubon Society and one of the authors of "Bird-World," make a delightful accompaniment to Mr. Seton-Thompson's pictures. Quarto. Cloth. $1.50.

FIRST STUDIES OF PLANT LIFE

By GEORGE F. ATKINSON, Professor of Botany in Cornell University 85 cents.
A fascinating and original study of the life histories of plants. The illustrations in the book, which number more than 300, have been especially collected for these stories and include many rare and beautiful photographs.

MOTHS AND BUTTERFLIES

By MARY C. DICKERSON. Large 8vo, cloth. Profusely illustrated. $2.50.
This will undoubtedly prove the most popular book of its kind which has appeared at a reasonable price. The author's intimate knowledge of her subject, her thoroughly popular and entertaining style of writing, and her skill with the camera and pencil are some of the qualities that will commend the book to all observers of out-of-door life.

WAYS OF WOOD FOLK

By WILLIAM J. LONG. Fascinating descriptions of animals and birds as seen at play in their homes. With seven full-page illustrations by Charles Copeland and William Hamilton Gibson, and numerous smaller pictures and illustrative initials and headpieces. For introduction, 75 cents.

WILDERNESS WAYS

By WILLIAM J. LONG, author of "Ways of Wood Folk." Illustrated. For introduction, 75 cents.
Another excellent nature book that is quite up to the high standard of "The Ways of Wood Folk."
The author lets the reader into the hidden life of the wilderness, not from books or hearsay, but from years of personal contact with wild things of every description.

PUBLISHED APRIL 23—SIXTH THOUSAND MAY 23

The Tower of Wye

A Romance. By WILLIAM H. BABCOCK. Illustrated by George Gibbs. *List price*, $1.50.

"The story fascinates from beginning to end."—*Current Literature*, N. Y.

"A distinct triumph, in many ways original. The author has made excellent use of his material and has clothed the whole adventure in a charming, innocent humor. The style of the book is excellent, and there is no inconsiderable amount of true dramatic situation which flames forth at unexpected moments."—*Public Opinion*, New York.

"A delightful tale of love and romantic adventure. 'The Tower of Wye' will find a host of appreciative readers. It is a fascinating story, written with great charm of style."—*Bulletin of the Booklovers' Library.*

"Mr. Babcock had a good, manly story to tell, and he has told it in a good manly way."—RICHARD HENRY STODDARD in the *N. Y. Mail and Express.*

"Written with remarkable care, with much beauty of detail, and with a thoroughly romantic feeling for the mystery of the new world. . . . A lovely conception, and how enchantingly put! One needs close reading for the enjoyment of such things—in fact, for the enjoyment of the whole book."—*Louisville Evening Post.*

PUBLISHED APRIL 30—EIGHTH THOUSAND JUNE 10

In Search of Mademoiselle

By GEORGE GIBBS. Illustrated by the author. *List price*, $1.50.

"A good historical romance. Mr. Gibbs has done marvellously well in sustaining interest and preserving the old-time atmosphere which seems to fail in many historical novels ere the last chapters are written. The fascinating interest of the tale is preserved to the end."—*Louisville Courier-Journal.*

"Mr. Gibbs has done for colonial Florida what the author of 'To Have and to Hold' did for colonial Virginia—intensified the interest in the actual history of the Peninsula. Only, 'In Search of Mademoiselle' is clothed with more of an air of probability—and we close the book disposed to believe it historical as well as dramatic."—*Burlington Hawkeye.*

"You who shall enter upon the search for Mademoiselle will pursue the quest to the end, with bated breath at times, at other times with rage, and at still other times with tears of sympathy and feelings of pleasure. You will read this book more than once, and like it the better after each new perusal."—*Nashville American.*

HENRY T. COATES & CO., Publishers, PHILADELPHIA.

LONGMANS, GREEN, & CO.'S NEW BOOKS

Last Essays

By the Right Hon. Professor F. MAX MÜLLER, K.M.

Late Foreign Member of the French Institute

FIRST SERIES

Essays on Language, Folklore and Other Subjects

CROWN 8VO, PP. VI.-360. $1.75

"Readers who want something more than stories about men and things, but something less than a treatise on the Professor's researches in comparative philology or Indian religion, will certainly welcome this volume, which has so much that is distinctive about it as an autobiography of the best kind."—LITERATURE.

Bolingbroke and His Times

By WALTER SICHEL. With 2 portraits in photogravure, and Index. 8vo, pp. x.-550. $4.00.

*** This volume embraces the whole public career of the first Viscount Bolingbroke and the complete reign of Queen Anne. It is an attempt to present from original sources, and with the fresh material recently to hand, some adequate portrait of a great genius and of the crowded background in which he moved.

My Lady of Orange

A Romance of the Netherlands in the Days of Alva. By H. C. BAILEY. With illustrations by G. P. Jacomb-Hood. Crown 8vo, $1.25.

"As a picture of the time, the book is as instructive as interesting. The action is quick, the situations exciting, and the end of all the adventures happy. 'My Lady of Orange' is a very lovable personage, whose character is one of the most charming phases of the story. Mr. Bailey has done good work in giving this book to the public."—REPUBLIC, St. Louis, Mo.

NEW VOLUME BY EDMOND KELLY, M.A.

Government; Or, Human Evolution

II. Individualism and Collectivism.

By EDMOND KELLY, M.A., F.G.S., late lecturer on Municipal Government at Columbia University, New York City. Crown 8vo, $2.50.

"This volume presents a strongly collectivist conclusion to the argument contained in the preceding volume on 'Justice.' Mr. Kelly's contribution to social philosophy is characterized by intellectual vigor and independence, and by a breadth of moral sympathy which helps him to comprehend the social and religious aspirations always at the basis of human progress."—THE OUTLOOK, N. Y.

PUBLISHED IN 1900.

I. JUSTICE

By EDMOND KELLY, M.A., F.G.S. Crown 8vo, pp. xvi.-360, gilt top, $1.50.

A Series of Verse Translations from the Greek Dramatic Poets, with Commentaries and Explanatory Essays, for English Readers.

Edited by GEORGE C. W. WARR, M.A.

1. **THE ORESTEIA OF ÆSCHYLUS.** Translated and Explained by GEORGE C. W. WARR, M.A., Ex-Fellow of Trinity College, Cambridge, Professor of Classical Literature in King's College, London.

Illustrated by 13 plates, in photogravure and half-tone, from antique sculpture and painting. 276 pages, cloth, gilt top, $2.00. [*Ready*

*** *Other volumes are in preparation. A descriptive circular of the Series, with a specimen page, will be mailed to any address upon request.*

LONGMANS, GREEN, & CO., 91-93 Fifth Ave., New York.

The Nation.

NEW YORK, THURSDAY, JUNE 13, 1901.

The Week.

"When in doubt, don't call Congress in extra session." That, in substance, appears to be the rule recommended to the President by the Attorney-General, and adopted by Mr. McKinley. If the Cabinet does not know where the Philippine policy is left by the decision of the Supreme Court, it is certain that Congress would not know either. If it met to legislate on the situation, the wisest thing it could do would be to adjourn until the Supreme Court had made the situation clear. Meanwhile, the Administration can go on taking the chances. Its work in the Philippines may be upset by the Court, as its work in Porto Rico was partially; but the Treasury is plethoric, and can pay back illegally collected duties without missing the money. In the general uncertainty, we can but think the determination a prudent one not to call Congress together, possibly to fly away with us to ills that we know not of. It is very much to be desired, however, that the Attorney-General should publish the opinion which he read to the Cabinet on June 4, and in which, according to the Washington correspondent of the *Tribune*, he "reconciled" the "apparently contradictory" judgments of the Supreme Court in the De Lima and Downes cases. Since the very judges themselves declared the two cases to be, in the language of Justice Gray, "irreconcilable," it is clear that Mr. Knox must indeed be, as the *Tribune's* correspondent admiringly says, a man "of the highest order of ability."

It is reassuring to be "officially" informed from Washington that "the Cuban people, as a whole, are perfectly satisfied with the Platt amendment." The evidence is the other way, but we know that our great and wise rulers would not mislead us, and so we are bound to believe them, in the teeth of the evidence. The Cuban press was outspoken and bitter against the Platt amendment—but then, we all know what newspapers are. The Convention refused to accept the amendment until so disfigured that even its begetters in Washington could not recognize their offspring; but, of course, that proved nothing. The Administration told us that the Convention was made up of unscrupulous politicians, and that their action did not at all represent the Cuban people. Coming from officials who cannot lie, all loyal Americans naturally believed that. However, the Cuban people expressed their views in the elections of June 1. They chose as Mayor of Havana a man who had voted against even the amended Platt amendment in the Convention. He got 11,115 votes to 7,533 cast for his nearest competitor. Moreover, he was the candidate of the Nationalist party, which had in convention just solemnly and unanimously passed a resolution against the Platt amendment. Yet it carried elections all over the island, as it did in Havana, under Gen. Wood's nose. This would look, to the untutored human mind, as if the people of Cuba, as a whole, were not in favor of the Platt amendment.

Shall the claims of sufferers by the destruction of the battle-ship *Maine* in Havana harbor in February, 1898, be considered by the Spanish Treaty Claims Commission? Decidedly not, say our authorities at Washington. So say we all of us. Who wants to have the responsibility of Spain for that catastrophe proved again? Of course, Spain would protest. She might propose to refer the question of her guilt to arbitration, and how could we refuse? She made that offer at the time of the explosion. We refused the offer because our blood was up, but, being cooler now, and having ratified the Hague treaty, we could not put it aside so easily. Besides, we have already paid those claims once. If anybody has any unsatisfied curiosity about the cause of the explosion, let him go to the hulk when the contractors for raising it undertake their job, and search for the fragments of the torpedo and of the cable that communicated with the shore. If none such are found, we shall know that the villain who plotted the crime has removed all the evidences of it, and we shall regret all the more that search was not made for these damning proofs at the time of the disaster, when American citizens possessing the requisite machinery and skill offered to find the same if they existed.

As there has been another "battle" in the Philippines, there must, of course, have been another anti-Imperialistic speech somewhere in this country. That is, we know, the rule—no speech, no battle. Gen. F. D. Grant has explained it. His acute mind was able to trace the effect of every anti-Imperialistic speech in Congress in the returns of killed and wounded. His trained faculties could just see the rhetoric laying low our soldiers. He would notify the surgeons to be ready as soon as he heard of Senator Hoar taking the floor; and his habit was to give everybody leave and close the military hospitals when the good news came that Lodge was speaking. But whose treasonable speech was it that, cabled to Batangas, resulted in the death of Lieut. Springer and the wounding of other officers and men? We do not know, and, as Gen. Grant is not on the spot to tell us, we may never know; but, in our humble opinion, it was the anti-Imperialist minority of the Supreme Court which was responsible. Judges ought to present a "united front" to the foe, just like Congressmen and the rest of us. It is all very well to argue the legal question whether the Constitution follows the flag, but the main thing is, as Mr. Dooley says, to see to it that the Supreme Court "follows th' election returns."

Judge Taft has already established an enviable reputation as a consistent optimist, yet his remarks on Saturday to the people in the Philippines about the effect of the decision of the Supreme Court must heighten it. He told them they ought to be very thankful that the Philippine tariff had not been declared illegal. If it had been, taxation on land would have had to be increased to a point which the people would find absolutely crushing. Then he bethought him that the Supreme Court had not yet decided the Philippine cases, and might do so in a way to establish free trade with the United States. In that case, the cheerful Judge assured the people, there would be a wonderful development of trade, and land values in the Philippines would increase to such an extent that the increased taxes could be borne with ease. In any case, you see, the lot of the Filipino is certain to be a happy one. How could it fail to be with such a happy Judge to rule over him?

When the National Association of Manufacturers begins to talk tariff reform, the dawn cannot be far away. To affirm, as the Association did at its late session at Detroit on Thursday, that protection should be given "to such products only as require it, without providing the opportunity for monopolistic abuses," is a sufficiently explicit way of saying that there are in the Dingley tariff wholly unnecessary duties which do lead straight to Trusts. The Association declined to endorse the Babcock bill for the removal of duties on iron and steel, but this was only *pro forma*. The principle underlying the bill evidently met with its hearty approval. Clearly, as one of the New York delegates asserted, there are "clouds of tariff revision in the sky," and manufacturers must take account of their existence. The old dilemma is before them: the tariff must either be revised

by its friends or overturned by its enemies. If anything more were needed to accentuate the imminent peril in which Dingleyism stands, it would be the appearance of Congressman Tayler of Ohio before the Industrial Commission at Washington, to put in a solemn plea for protection, and to resent with indignation the charge that even Ohio was wavering in the true tariff faith. Mr. Tayler admitted that he was for reciprocity in general, though he was stoutly against every particular reciprocity treaty. This is an old habit of politicians. No one can surpass them in their ardor for a general principle; but no one can ever induce them to support "this particular measure" to carry it out. Yet these trimming gentlemen had best trim their sails to catch the reciprocity breeze which is already beginning to blow. The Eolus in the White House is skilfully directing it, and the Reciprocity Convention soon to be held in Philadelphia will still further quicken it.

Mr. Theodore Search having been, for a long time, if not the head of the protectionist school in Pennsylvania, very near to it, the public must have been surprised by his speech at the Detroit meeting. Not only did he advocate reciprocity in abstract terms, which might reserve to himself liberty to oppose everything in the concrete, but he designated the pending treaty of reciprocity with France as one which ought to be ratified. This projected treaty did not lapse at the end of the last Congress, Secretary Hay and Minister Cambon having arranged for keeping it alive. Mr. Search's remarks were warmly approved by the convention, only one member, a knit-goods manufacturer, speaking in opposition. The Western makers of agricultural machinery were heard from in the person of Mr. James Deering of the Deering Harvester Company, who said that those persons whose interests were slight, those whose injury was conjectural, must put their selfish interests aside, and coöperate for the ratification of the treaties, and especially of the French treaty, "at the next session of Congress." He considered that the Association would be seriously neglecting its duty if it did not throw itself strongly into the movement "for softening our tariff relations with foreign countries." Mr. Sanders of New York spoke in terms of some bitterness on the subject of the tariff war now waging with Russia. A time had come, in his opinion, for protecting our full-grown industries by open markets, instead of protecting infant ones by the policy of exclusion. A member from Michigan said that "the time had passed when a high tariff is a benefit to American manufacturers." All these rills of testimony run to the conclusion that the Republican party is going to burst the high-tariff chains that have bound it so long, and adopt a policy of freer trade with foreign countries.

The complaints of young men who are dismissed from West Point and Annapolis for hazing or other breaches of discipline are likely to meet with a chilling response from the public. The five cadets sent away from West Point a few days ago have just been joined in exile by two more from the same place and one from Annapolis. The offenders declare, however, that, having failed to work upon the sympathy of the Cabinet officers, they purpose to bring the matter before Congress. Their attitude is not altogether surprising, for they doubtless know that hitherto political influence has played altogether too large a part in the discipline both of the army and of the military school. In these particular cases, however, the Secretary of War has taken a very positive stand; and he is not in the habit of backing down. Perhaps, then, the time is unusually opportune for an appeal to Congress; for if Congress, enlightened by the results of its recent investigations of hazing and fortified by Secretary Root's backbone, chooses to establish a striking precedent in favor of sustaining strict discipline at West Point, the effect on both the Military and the Naval Academy cannot but be wholesome.

The honesty and efficiency with which the Pension Commissioner, Mr. H. Clay Evans, has administered the laws, thwarted thieving attorneys, and exposed swindling claimants, were twice recognized last week at Grand Army encampments. As usual, the testimonial to the integrity of Mr. Evans took the form of resolutions bitterly denouncing his conduct of the Pension Bureau. No man in the McKinley Administration deserves heartier congratulations than Mr. Evans. He has held an office in which he could reform abuses, and in other ways achieve great results; he has shown himself equal to his unusual opportunities, an officer notable alike for skill and probity. Other men, perhaps quite as worthy of praise, have had to be content with nothing more satisfying than the approval of their own consciences. Mr. Evans, however, has enjoyed the singular felicity of hearing his good deeds trumpeted to the world by State and national encampments of the Grand Army for three years past, and of knowing that attacks which were intended to harm him have won him the cordial support of intelligent and decent citizens.

That estimates of the outturn of home and foreign harvests should, at this season of the year, be awaited with keen interest, is perfectly natural. Harvest results provide the one essential factor, in economic and industrial progress, which is wholly beyond the control of man. Human sagacity may insure wise currency legislation; it may increase output of gold; it may avoid political complications; it may develop existing trade at home; it may create new trade abroad. But it cannot cause abundant harvests or prevent a crop failure, upon which alternative, at certain junctures, nearly all of the five other influences cited above depend. With all the increase, in the three past generations, of other factors going to make up prosperity or adversity, it is almost as true to-day as it was a century ago that the average nation's industrial welfare depends chiefly on the raising of an abundant crop and its sale at fair prices. The Government's estimate of our own wheat outlook in June —the month when conditions are fairly well defined—has this year had particular interest, because the almost unbroken series of fortunate harvests in America, beginning with 1897, gave some general ground for fearing that the cycle of agricultural prosperity might this year be about to move against us.

By present indications, it has not done so. "Crop weather" in May was very trying, and the growing wheat does not promise to-day the results its condition indicated a month ago. Yet even the 6 per cent. impairment of the growing winter-wheat crop during May, as reported on Monday by the Department of Agriculture, leaves the June percentage indication the highest in twenty years, with only five exceptions—each of those five high estimates having been followed by a "record-breaking" crop. When to this is added the fact that the condition of spring-grown wheat is also figured out as above the average, and that, in all, nearly a million acres more of wheat have been planted in this country than in any previous year, the legitimate promise of the outlook may be judged. The test of the harvests is, of course, not yet over. Last year bad weather during June cut down the spring-wheat estimate, and the crop's eventual yield, by 32 per cent. Seven years ago a July drought reduced the corn crop's condition 26 per cent., and brought the total yield four hundred million bushels under that of the year before. But largely outweighing this possibility, from the farmers' and merchants' point of view, is the striking fact that Germany's wheat crop already indicates a shortage of over 30 per cent., as compared with 1900, and that the promised outturn elsewhere in Europe is not encouraging. In other words, it is likely that whatever grain America has this year to spare for export will be taken at good prices.

Representatives of the little towns in the Connecticut Legislature, in refus-

ing to make any concession to the demand for a change in the system of legislative representation, have unwittingly aided the cause of Constitutional reform in that State. The long agitation for Constitutional changes looks mainly to a shifting of the basis of representation from acres to people. This sentiment has shown so much force this year that leading Republicans, from Gov. McLean down, and influential Republican newspapers have urged that something be done to appease the clamor. Concede a little, they have said to the selfish supporters of the present undemocratic and inequitable arrangement, or the gathering storm may sweep away the town boundaries and destroy the historic and "fundamental" system. Deaf to these appeals, however, the Republicans in the House have rejected a proposed amendment to the State Constitution, prepared by the Chairman of the Republican State Committee, which aimed to correct in small degree the injustice, an extreme example of which is the equality in voting strength in the House of the 428 people in Union and the more than 100,000 in New Haven. The amendment which is thus defeated would have taken one Representative from Union and from each of thirty-four other little towns, and added five to New Haven's two, three each to Hartford and Bridgeport, and one each to three smaller cities and to eighteen towns having less than 5,000 population. Though a trifling betterment of present conditions, the proposed change was in no way satisfactory to the earnest advocates of reform by a Constitutional Convention, and Democrats in the House aided the little-town Republicans in rejecting it. This leaves the issue unchanged; and with Republican acknowledgment that, to quote the Hartford *Courant*, "there is an actual, not merely a theoretical, injustice in things as they are," the reform is sure to come, though it may be long on the way.

The name of Joseph Merrill, unknown yesterday outside of Carroll County, Ga., to-day deserves honor throughout the United States. The man who has thus leaped from obscurity into national recognition is the sheriff of his county, and in that capacity had custody of a colored murderer who was to have been executed on Friday. An appeal to the Supreme Court at the last moment caused a stay of proceedings, and the crowd which had gathered to witness the hanging was soon converted into a mob that assaulted the jail, battered down the outside door, and called upon the sheriff to turn over his prisoner. He refused their demand, ordered them to stop or they would be fired upon, and, when they advanced, gave his deputies the order to fire. One man was killed, two others were wounded, and the rest were so demoralized that they fled, while the sheriff telephoned to the Governor for troops, which arrived in a few hours and carried the prisoner out of the county for safe keeping. A great service was thus rendered to the cause of civilization by a man who had the courage to do his duty as an official in a crisis, even when it involved shooting his neighbors.

An honorary degree from Oxford for Profs. Charles A. Briggs and Francis Brown of the Union Theological Seminary, respectively, will be gratifying to all friends of sound learning and intellectual progress. Union Theological Seminary and its professors—Dr. Briggs in particular—have suffered no little persecution for alleged heterodoxy. At the same time the views in regard to the Bible held by Dr. Briggs have been admittedly those which are generally accepted by the highest authorities in English and Continental universities. The question which the seminary had to face was whether it should yield to the clamor of a body of clergy and laymen who were thoroughly provincial in their point of view, or whether it should keep in line with the best thought of the modern world. Fortunately, for itself and for the cause of religion, it chose the nobler course. It would also be fortunate if the official recognition of Dr. Briggs's scholarship by one of the oldest and most famous universities, a centre of orthodoxy, should help to check the activity of professional heresy-hunters.

Compliments for the good behavior of the American troops in China continue to reach us. The *China Times*, noticing their departure, says that they were extremely kind in their treatment of the native population and that their discipline was excellent; also that American traders were next after the Japanese to establish a market and gain the confidence of the people. The British troops too, were to be commended for their good behavior. As for the Germans, Russians, and French, the less said about them the better. The Germans and French "took their cue" from their commanding officers when the latter looted the Astronomical Observatory at Pekin to promote culture in Berlin and Paris, following the example of the first Napoleon, who gorged the Louvre and the National Library with the spoils of Italy and Holland. If the European and American public had imagined that Von Waldersee was capable of sanctioning and participating in this act of vandalism, it is hardly possible that he could have been selected as Commander-in-Chief of the allied forces.

The agitation in favor of old-age pensions in England was fomented chiefly by Mr. Chamberlain; but he now explains that, as the matter has become the subject of party controversy, it is better to drop it. Owing to this inopportune development, the problem cannot receive that calm and careful investigation which is necessary. The opinion is held by some persons that Mr. Chamberlain has done more than any other man to make the pension scheme a party measure, and they do not hesitate to say that his explanation is not satisfactory. Moreover, as the *Economist* points out, Mr. Chamberlain's proposal to endow lodges of the fraternal orders, such as the Odd Fellows, that are "actuarially" insolvent, is to render the matter more complicated and controversial than ever. The true explanation of the change in Mr. Chamberlain's attitude is suggested by Mr. Morley, in justifying his support of the financial measures of the Government. He voted for the new taxes not to "penalize" the voters, but to instruct them. He did not deny that the country had favored a policy which he regarded as a policy of stupendous folly; but he thought that the nature of this policy would be brought home to the people by presenting the bill now, instead of passing it on to future generations. In spite of a free press, in spite of the pulpit, "the tax-gatherer is the real school-master." And when the bill is presented and the tax-gatherer demands payment, the demand for old-age pensions collapses. There is no statesman so hardy as to propose further taxation. The accumulations of the past have been spent, and the revenues of the future mortgaged, in order to destroy the independence of the Boer, and social reforms requiring money must wait until people have earned and saved it.

Australia is setting up a Monroe Doctrine, so the German press complains. Prime Minister Barton has asked Secretary Chamberlain to declare to the Powers that Kerguelen Island lies within the "natural sphere" of Australia. It happens that this island was annexed by France nine years ago, but the Australians want it. How they are to induce the French to give it up, the *Frankfurter Zeitung* says it is difficult to see, and adds that it will soon be a question, if this Australian Monroe Doctrine is valid, of the German and French possessions in the New Hebrides, New Caledonia, New Guinea, and Samoa. In reality, the thing ought to be called the Grey Doctrine. That far-sighted empire-builder, Sir George Grey, when Governor of South Australia in the last century, urgently besought the English Government to assert an Australian "sphere of influence," within which it would allow no intruders. But that seemed fantastic to the wise men in Downing Street, and nothing was done. Apparently the federated and ambitious Australians now wish that Grey's advice had been taken.

ENGLAND AND AMERICA.

It is certainly a cordial welcome which our visiting merchants have met with in London, and if a good deal of silly platitude has been uttered on the occasion, that was doubtless inevitable. International banquets are notorious for provoking to decorous dulness. But the event might well be seized upon for the purpose of asking seriously the question, What is it that England and America really have to learn of each other, to give to each other, to work out together in the world?

Most of the recent talk has been a revival of the hollow and insincere professions of friendship for England of which we heard so much in this country at the time of our Spanish war. This refers to a possible armed alliance. Mr. Carnegie has been flattering the pride of Englishmen by telling them that, when the Continental Powers combine to "smash" the little island, the United States will raise her big fist and save imperilled and helpless England. English statesmen must have grinned when they read this. As it is their business to know the facts, they are fully aware that a European alliance for the purpose of crushing England would be bidden God-speed by a powerful, and very likely a predominant, element of our population. They cannot have forgotten our readiness to fly at their throats in 1895. They must have their eyes on Lodge and the other sleepless enemies of England in Washington. So they do not need to be told that the United States would be much more apt to hold the bottle for embattled Europe than to interfere in England's behalf. The truth is, that neither country is at all inclined to place either its arms or its diplomacy at the service of the other. All this is folly.

When we talk about offensive and defensive alliances, we revert, whether we know it or not, to what has been called an international state of nature. In this, nations act as men did before they entered into society. Each nation's hand is against the other; the only law is that of the stronger, and good faith is unknown. Alliances? How long ago was it that England was in alliance with France, for the express purpose, according to Thiers, of making head against Russia and America? It was this alliance, with its concomitant attempt to suppress free speech in England, that drew from Tennyson his indignant assertion of the Englishman's "ancient privilege" to "fling whate'er we felt, not fearing, into words." England's alliance with France went up in smoke, and so would any other that she might make for mere fighting. We have not the slightest pleasure, or the slightest confidence, in all the gush about "hands all round" and "hearts across the sea," as long as it reflects simply a wish to see the English and American fleets united for the purpose of whipping all creation.

This is not saying that the two countries may not wisely and usefully cooperate in great affairs of international concern. They have done it in China. If their common stand there for moderation and humanity and equal opportunity was not crowned with complete success in the actual result, it won at least the success of demonstrating what the attitude of two great Christian nations should be. Here is an *entente* which cannot be too *cordiale*. And in all international undertakings that look to the improvement of relations, the protection of property, the perfecting of the law of nations, the softening of war, there is every reason for England and America to join in a good understanding for the furthering of the enlightened and humane principles which, we believe, both have at heart.

As for what either nation has to learn or receive from the other, a good guide would be the mature opinion of the wisest men in each. To copy what the wisest have warned their countrymen against, would surely be to put on folly's crown. Yet this is very much what we see going on. If there is one thing which has been fixed in the traditions, the teachings, the very prejudices and passions of Americans, it has been dislike and dread of an English colonial policy. It has stood in our eyes for the extreme of oppression, for the measure of governmental mistake. Whenever we have thought of the European "follies" upon which, as Napoleon said to Col. Wilks, "America has thriven," the folly of holding colonies in subjection has ranked first in our minds. But we are now turning our back upon all that, and we are complacently taking out of England's book the leaf which we have always maintained to be the blackest. We have even lived to hear a justice of the Supreme Court of the United States endeavor to allay the fears of Americans, when invited to embark on a colonial policy, by pointing with pride to "the conduct of the British Parliament towards its outlying possessions"!

Turning to the other side, we find the teaching which America is setting England to be a strange falling away from that which the most ardent and aspiring English spirits thought to get from us, a generation ago. Bright and Mill and the other Liberals—what was the leaven which they hoped to see spread from the American to the English democracy? Certainly it was nothing vulgar or material—neither millionaires nor machinery. No, what they looked to with eager hearts across the Atlantic, was the working out of the great democratic experiment on a larger scale and under more favoring skies than were possible in England. They hoped to hear a louder vibration here of "that deep chord which Hampden smote." Equality before the law, the citizen protected in all his rights by written Constitution and enacted statute, a career open to talent, freedom from militarism with its temptations away from the national ideal and its burdens of taxation, opportunity as boundless as need, civic and social betterment carried out by the people themselves—such were the qualities, such were the achievements, which progressive Englishmen looked for with proud anticipation in the American democracy. They awaited here a triumph of their own theories, and, as we may see in what John Morley wrote of that fine and hopeful democrat, Ralph Waldo Emerson, or even in what Carlyle had to confess in 1871, they thought that America was doing her destined work well.

In such a line was, in truth, the only possibility of a great contribution of American democracy to England or the world. We shall return to that ideal all in good time. These passing flurries of war and dreams of territorial aggrandizement, with their gorgeous but fleeting Imperialistic visions, will not prevent our democratic instincts from asserting themselves again. We shall right ourselves, and show ourselves true to type. When we do, we shall leave off the military swagger which becomes us so ill, and once more devote ourselves to the expansion, not of our old boundaries, but of our old principles. They will, in the end, again make wealth and power subsidiary to the common good of the common people.

ADVICE TO MISSISSIPPI.

Mr. Stuyvesant Fish, President of the Illinois Central Railroad, was invited to address the University of Mississippi at its commencement exercises the present year. Having been prevented by other engagements from doing so, he addressed a letter to the Chancellor of the University, asking that it might be accepted in place of the address which he was requested to give.

Mr. Fish first makes some agreeable personal references to the memory of Lucius Q. C. Lamar, Senator and Justice of the Supreme Court from Mississippi, and of F. A. P. Barnard, Chancellor of the University of that State, before he was called to the head of Columbia College. He then passes to a survey of the growth and present condition of the two States of Mississippi and Iowa, from which he draws the text of a sound moral discourse. Mississippi was admitted into the Union in 1817, Iowa in 1846. In 1850 the former had more than three times the population of the latter. At the present time Iowa exceeds Mississippi in numbers by half a million. Iowa has 25,428,899 acres of improved lands; Mississippi

has only 6,849,390. Iowa has 612,000 people living in cities, towns, and villages, while Mississippi has only 138,000. The more sluggish growth of the latter State was due, in part, to the institution of slavery before the civil war and to political disorder afterward, but both have since passed away, and the opportunity is now presented to Mississippi to enter the lists with any of the agricultural States of the North in the race of prosperity. In one particular Mississippi has made a great gain within the past ten years. She has practically abolished the "factor" system of farming, under which in former times the planter usually worked his land by means of advances from agents or money-lenders in New Orleans, Memphis, or Mobile. The charges made by the factors, including commissions on buying mules, ploughs, and supplies, and on selling the crop, and other charges which the planter had to pay, exceeded 20 per cent. As Mr. Fish says:

"No Northern State has ever stood, or is productive enough to stand, such a charge throughout a series of years, and yet the South generally, and particularly Mississippi, after four years of war followed by ten years of misrule, did, throughout a generation, under these circumstances, subsist and grow. This bears the strongest testimony possible to the fertility of the soil and the capacity of the people of Mississippi to work, endure, and conquer. The factors' credits began to be generally withdrawn after the panic of November, 1890, and today the farmers of Mississippi are very generally out of debt. Many parts of the State now enjoy the blessings of mixed farming and fruit culture, under which crops are marketed during the spring and summer months, thus furnishing the cash with which the cotton crop is now so largely grown."

Mr. Fish then turns his attention to the principal drawbacks upon the progress and prosperity of Mississippi in the past. These have been (1) slavery; (2) repudiation of the old State debt; (3) the civil war; (4) carpet-bag rule; (5) the practice on the part of the best-educated young men of going exclusively into the learned professions, to the exclusion of commercial, manufacturing, and other productive employments; (6) the emigration of large numbers of this class of young men to the cities of the North and West; (7) unwise restrictions imposed upon the granting of charters for associated capital; (8) the absolute control of all civil offices and political power by one party ever since carpet-bag rule was overthrown in 1876.

Among the suggestions in the interest of future growth and improvement, material and moral, made by Mr. Fish, the following seems to us the most weighty:

"Alike for the sake of the good name of the State, and from motives of enlightened self-interest, see to it that the stigma of repudiation be removed by making, with the creditors of the State, such honorable settlement as they may be willing to freely accept."

The fact that Mississippi repudiated her State debt by popular vote before the civil war, and again in her State Constitution after the war, is, of course, well known, but the details are not so well remembered. The disgraceful affair dates back to the thirties, at which time a bank mania was raging in the Southern country. The State decided to have a bank that would lend money to her needy planters. She incorporated the Union Bank, and issued State bonds to the amount of $5,000,000, to provide the capital. These she sold at the rate of 4s. 6d. per dollar, which was the par value, Mr. Nicholas Biddle being the buyer. Mr. Biddle sold them to various investors in Europe and the United States. Most of them found their way to England and Holland. The money of the Union Bank was loaned on inadequate security and lost. The bank failed within two years, and the State defaulted on the interest of the bonds. In 1841 the Governor of the State recommended repudiation of the debt, on the ground that the bonds were illegal, and had been fraudulently issued. The Legislature then in session protested vigorously against the Governor's recommendation, but the people sided with the Governor, and elected a new Legislature which agreed with him.

At that time the Constitution of the State allowed suit to be brought against her in her own courts. The bondholders sued the State. The courts, including the Court of Errors and Appeals, repeatedly held that the bonds were legal and valid claims against the State, but no appropriation was ever made by the Legislature for paying either principal or interest. In 1852 the question of levying a tax to pay the interest on the bonds was submitted to a popular vote, and was decided in the negative by about 4,000 majority. In the meantime, however, another batch of State bonds, issued for the benefit of the Planters' Bank in 1831-2, had gone to default in 1839, and these were repudiated also. In 1875, in the carpet-bag era, the State adopted her present Constitution, which forbids the payment of either the Union or the Planters' Bank bonds.

It can never be too late to raise a voice for the payment of a just debt. Minnesota once repudiated her railroad debt, but eventually she removed that blot from her escutcheon. Virginia within recent years made a compromise with her creditors, which, if not wholly satisfactory to them, removed her from the list of repudiating States. Upon Mississippi alone rests the stigma of repudiation unrelieved by even the pretence of excuse. She is now abundantly able to assume that old debt. She can never lift up a clear brow among her sister commonwealths until she does so.

THE TAXATION OF STREET RAILWAYS.

The judgment of the Supreme Court of New Jersey, in the matter of the taxation of the right of way of a Newark traction company, is of very great importance. We cannot regard the question as settled until the Court of Errors shall have passed upon it; but it is obvious that the doctrine laid down by the Supreme Court would greatly simplify the perplexed subject of franchise taxation. The point on which the decision turned was the nature of the right to occupy streets which railway companies possess. For some mysterious reason, tax-assessors have generally been unable to regard this right either as real estate or as personal property, and it required a special session of the New York Legislature to shape a franchise tax bill declaring rights of this kind to be real estate. We are still ignorant whether the Court of Appeals will hold the legal definition of the term real property, as used in the Constitution, to be a proper exercise of legislative power, and the New Jersey decision suggests that such definitions may well be intrusted to the courts.

It is generally understood that any estate or interest in land, if superior to a temporary license, is real estate. Hence it scarcely admits of question that the rights of the public in the highways, even when the fee of the land has not been acquired, are of the nature of real estate. When the fee remains in the abutting owners, the public has a perpetual easement, which is frequently of great value, and in cities has often to be acquired at great expense. It is said that the municipal authorities hold this easement as trustees for the public, but that does not affect the nature of the estate in the land. As the public does not tax itself, there has been no occasion to question the nature of its interest, and we believe that it would excite surprise were any one to raise such a question seriously. Such interests have been frequently acquired by exercising the right of eminent domain, which is certainly to be called depriving citizens of their lands, if language is used intelligibly.

What happens, then, when the public grants to a particular person or corporation an exclusive right to occupy a highway for a certain purpose? It would seem that this is a grant of an easement which is as much real estate as that out of which it is granted. If a private citizen grants a trolley company a right of way through his land, he considers that he parts with something of the nature of real property, and the trolley company probably thinks that it acquires a right of that nature. We venture to say that these companies make sure that such rights are conveyed by deeds, which are recorded with other conveyances of land. When they obtain grants from public authorities it is unnecessary to record them, but they are deeds nevertheless. Perhaps it is not going too far to say that, were

it not to escape taxation, the traction companies would never have thought of denying that their rights of way were estates in land.

The arguments relied upon by the Newark company in opposing the tax assessed on its right of way were substantially two in number. It maintained that this right was not real estate, and that, if it were, it was of no value, because it was not exclusive. Justice Garrison, in his dissenting opinion, admits that the easement in the highways owned by the municipality is real estate, but maintains that the easement granted by the municipality is only an equitable interest. The municipality, he says, must retain the legal estate as trustee for the public. But this does not make it clear that an equitable interest in lands of such description, which is certainly much greater than that of a mortgagee, should not be taxable as real estate. There have been fewer changes in the common law in New Jersey than in most States, and the distinction may be valid there; but it is doubtful if it would be generally sustained.

The first argument, however, really rests on the second, which is one to be considered in the forum of common sense. The argument is that a trolley company has no greater right in the street than the foot traveller or the ordinary vehicle, and that its right is therefore no more subject to taxation than theirs. Those who are familiar with the early history of railroads in this country will remember that they were at first regarded in the same way as the old turnpike companies. As every man might drive on the turnpike, so, it was expected, any one might hitch up his own locomotive and car, and make use of the railroad. But the disastrous consequences of this method of railway operation were immediately discovered, and the result has been that the steam railroads have an exclusive easement in the land on which they operate, and their interest in this land seems to be real estate, if any interest in land can be. It would be pedantic to contend that when certain individuals are empowered by law to remove certain others from their homes, and expel them from their lands, in order to carry on the business of transportation, the rights thus transferred are not rights in land. They are practically all the rights in land that have any value whatever.

The prevailing opinion in the New Jersey Supreme Court presents the matter clearly and forcibly. "As between the city of Newark, having such title to the highways, and the trolley company, the latter has acquired the right to lay on the soil the foundations for its tracks, to lay rails thereupon, and the right to the continuous, uninterrupted occupancy of such part of the public estate. Its poles and its tracks are there permanently, to the exclusion of any other person who might desire to occupy the land." To say that such a right is no greater than that enjoyed by the public in general, is, in the words of the Court, "in conflict with the evidence of our senses." Should this sensible view come to prevail, the problem of taxing traction companies would become only a problem of just assessment. The monopoly of the use of the streets is certainly property of value, and therefore taxable. The earnings of the traction companies will enable the assessors to judge of the value of these lucrative privileges.

PUBLIC MORALITY AND THE THEATRE.

More journals than one, in recent years, have directed attention to the necessarily demoralizing effect upon the public at large of indecency upon the stage, and have urged the importance of imposing some restraint upon an evil which has been growing for a good while, attained serious proportions long ago, and threatens now to relegate modesty to the limbo of extinct virtues. A note of alarm on the same subject is sounded by an Englishwoman, in an English review. She asks whether it can be possible that the girls of the rising generation are really deficient in that natural delicacy which is among the most precious attributes of the sex and points to their habitual presence at entertainments of acknowledged impropriety, as a justification of her inquiry. Their complacent enjoyment in the theatre of unseemly words and actions, of which they would profess abhorrence elsewhere, can be explained, she argues, in only one of two ways: either impurity does not shock them, and their ordinary assumption of modesty is a conventional sham, or else they cherish the delusion, which is incredible, that the theatre is so essentially unreal, so disconnected from actual life, that nothing said or done in it matters much to the beholder.

There can be no doubt that the violations in our theatres of the laws of common propriety have been growing more frequent and more flagrant of late, and especially in those houses which are supposed to be supported mainly by the most cultivated classes of society. During the last few months, not to be too specific, there have been presented, in first-class theatres, several plays abounding not only in unclean suggestion, but even in grossly coarse action, without exciting any symptoms of surprise or indignation on the part of the audience. On the contrary, the most "risky" scenes, as it is now the fashion to call them, were received with every sign of cordial approbation by both male and female spectators. It is also a fact that some of the plays which, one would have thought, ought to have been most objectionable to persons of refined taste, have attracted their largest audiences at the afternoon performances, which, as everybody knows, are attended chiefly by women.

The most obvious inference from all this, that the women of to-day, or a large proportion of them, are depraved, or, to put it more euphemistically, less dainty in their instincts than those of preceding generations, is not necessarily the true one. It does not follow that all the women seen at such performances are there of malice prepense, that they go to them more than once, or that they are attracted by what is worst in them. But, however this may be, there can be no dispute as to the existence of a considerable body of playgoers with an appetite for foul or coarse flavors—an appetite which grows by what it feeds on—or as to the debasing effect upon the public of a theatrical policy which caters to it. Innocence herself could not long breathe an atmosphere so polluted without contamination. The commercial managers, upon whom the responsibility for unwholesome productions primarily rests, contend, of course, that they have no discretion in the matter, that their financial existence depends upon their compliance with the law of supply and demand, and that they would have to go out of business if they did not give the public what it wanted. Over and over again has the utter fallacy of this defence been pointed out, but none the less do they continue to repeat the old silly parrot cry.

A moment's reflection is sufficient to convince any person of ordinary intelligence that the public has no means of expressing a demand, or at all events, never does express anything like a general demand, for any particular kind of dramatic entertainment, whereas the character of the future supply is determined arbitrarily by the managers. The sole privilege of the theatre-goer is the right to choose between the various performances provided for him. He naturally selects the best that he can find, but this is no proof that he is contented with what he gets, or that he would not have preferred something better. The success or failure of a play is itself no evidence of its quality, or necessarily of its real popularity, which can be demonstrated only by its vitality in successive revivals. A fictitious and lucrative popularity may be, and often has been, maintained for weeks, or even months, by the arts of advertisement, the notoriety of a performer, a striking novelty of scenic effect, the momentary interest of the topic, or the shameless promise of some peculiar audacity.

It is true, doubtless, that some abominable plays have flourished amazingly for a season, but it is also true that very few of them are long-lived. Like other rubbish, they blaze fiercely for a

brief period, and then collapse in a malodorous fizzle. Almost all of the plays which endure—apart from the masterpieces—are essentially innocent, with honest appeals to the fundamental emotions or the common humor of humanity. How is this indisputable fact to be reconciled with the alleged craving of the great body of the public for the impure? How is it that the most successful plays of the present period, not only in this city, but in London, include such entirely innocent pieces as "A Royal Family," "Brother Officers," and "The Second in Command"? The reference here is not to literary or artistic merit, but to the mere vulgar capacity for money-making—the one managerial standard of virtue. How is it that "Uncle Tom's Cabin," after forty years of maltreatment, can still draw crowds in all parts of the country, if the mind of the masses is inclined to the unclean?

There is no evidence of any kind to support such a theory. The popular books of the day, which are sold by the hundreds of thousands, may not represent the highest literary standard, but they are not immoral or coarse. Moreover, the cheaper entertainments in the music-halls and the minor theatres are almost invariably decent, however much they may be lacking in sense or refinement. It seems that it is only in the higher, or rather the more expensive, order of theatres that scenes are represented and words are uttered which no self-respecting man or woman ought to be able to see or hear without indignation.

THE AMHERST ECLIPSE EXPEDITION. —II.

SINGAPORE, April 23, 1901.

A vertical sun, luxuriant foliage, thronging specimens of every nation on earth, and obvious British rule, masterful, benign, unquestioned—these are Singapore, or S'pore, as the wilted residents from more temperate regions write it. Countless jinrikishas drawn by Chinese coolies, local hackney carriages, or gharries, with their kitten-like ponies, bullock-carts driven by Malays or Klings, open victorias of English residents, the high cart affected by wealthy Chinese with its footmen and outriders often in a livery of gold-embroidered green velvet, people from Mandalay and Burmah, Siam and Java, Cingalese men with carefully arranged hair and round tortoise-shell combs, Germans, Dutch, Japanese, fill the streets. And here (unlike the United States, where immediately upon landing every emigrant attempts to become American, his nationality unrecognizable after a few weeks) everybody as a matter of course preserves unaltered the characteristics of his race in dress, customs, language; making of Singapore the most cosmopolitan city on the globe.

Hither have come eclipse expeditions from many countries, on their way into the path of shadow which will fall comparatively near. Fifteen or sixteen of these parties have established themselves on the west coast of Sumatra, chiefly at Padang, or just below at Painan. Among those who have chosen this position is Mr. Newall of Cambridge, chief of the British Eclipse Expedition, and with him Mr. F. W. Dyson, chief assistant to the Astronomer Royal at Greenwich. They have in their equipment a Thompson photoheliograph, historic from having been successfully used by the Astronomer Royal in India in 1898 and last year in Portugal, and a double camera for photographing the long streamers of the outer corona. The possible rotation of the corona will also be investigated. The United States Naval Observatory party, in charge of Prof. A. N. Skinner, passed Singapore about ten days ago, proceeding on the *Buffalo* to Padang. In addition to Prof. W. S. Eichelberger, Mr. F. B. Littell, Mr. G. H. Peters, Mr. L. E. Jewell, and Mr. W. W. Dinwiddie of the Observatory, a number of astronomers from other institutions accompany them—Prof. E. E. Barnard of the Yerkes Observatory, Dr. S. A. Mitchell of Columbia University, Dr. W. J. Humphreys of the University of Virginia, Dr. N. E. Gilbert of Johns Hopkins, and Dr. H. D. Curtis of Leander McCormick Observatory. Their work will be photographic, spectroscopic, and polariscopic, and several stations have been planned, the provisional localities to be changed should it be deemed wiser, upon arrival. One, however, will probably be at Fort de Kock, near the northern border, others at Solok, about thirty miles from the centre, and at the central line farther south.

During the last week of March, Professor Perrine of the Lick Observatory, with Mr. R. H. Curtis as assistant, arrived, and also Prof. Shin Hirayama and Mr. K. Hirayama from Tokyo University, all of whom left very soon for Padang. The Dutch astronomers, Mr. Wilterdink of the Leyden Observatory, Professors Nyland and Julius of Utrecht, sailed about the middle of March directly for Padang, near which certain members of the Jesuit mission at Calcutta will set up their instruments. From the Institute of Technology in Boston, the party is in charge of Prof. A. E. Burton, assisted by Mr. George L. Hosmer and Mr. Harrison W. Smith of the Institute and Mr. Gerard H. Matthes of the United States Geological Survey. Mr. Matthes is a native of Holland, who came to the United States in 1891, graduating at the Institute four years later, and becoming a citizen of the United States. They left New York on February 23, and have established their station on high ground near the terminus of the railway running from Padang to mines in the mountains. Magnetic and pendulum observations will be made, as well as photographs of the corona, the region near the sun, and of the shadow bands. Mr. A. Lawrence Rotch, director of Blue Hill Meteorological Observatory, and Professor Upton of Brown University are expected just before the eclipse, for observations chiefly meteorological.

It is, perhaps, unfortunate that so many important expeditions and fine instruments are gathered in one locality. Should weather conditions prove unkind on the great eclipse day, all would probably suffer equal defeat under such circumstances. On the other hand, should clear skies prevail, an extensive and brilliant success must be recorded. Padang is, of course, somewhat easier of access for observers and heavy instruments than Borneo or Celebes; and while totality is longer on the west coast of Sumatra than in the latter islands, weather conditions do not promise as favorably as farther east in Makassar Strait, or farther west at Mauritius, where Mr. Maunder of the Royal Observatory at Greenwich will work in connection with Mr. Claxton, director of the Observatory. The Dutch Government has kindly announced that no duties or examinations will be required on anything brought by the astronomers, even of articles commonly not exempt from the tariff.

Professor Todd, in charge of the Amherst College Eclipse Expedition, has established his observing station at Singkep, a small Dutch island under the residency of Rhiow, of the Dutch East Indies, and also under the Sultan of Lingga. It is about 170 miles southeast of Singapore, almost exactly at the centre of the eclipse track. Dabok, the only town on Singkep, is headquarters of a tin company, whose officials, in addition to the general Government courtesies, have most generously offered every facility for observation, as well as workmen and comfort in living during our stay on these equatorial shores. Dabok is fourteen miles north of the exact central line of totality, and thirty miles south of the equator. Though farther east than Padang, its totality is six minutes and fifteen seconds, which is precisely the same, Padang being farther north of the central line than Dabok.

Professor Todd, with his assistants and instruments, is already at Singkep, for eclipses will not wait, even for royalty; so it remained for the unofficial members of his party to participate at Singapore in the festivities attending the visit of the Duke and Duchess of Cornwall and York. From Gibraltar onward we have been but two or three days in advance of the *Ophir* and her distinguished company; while English and colonial newspapers have been filled for weeks with descriptions of their departure, the preparations for welcome, and programmes to be carried out from England to Australia. Singapore may not be more loyal than the other colonies visited, but her greeting must have been more picturesque. For many days in advance the streets have been aflame with brilliant decorations, Malay, Indian, Chinese. Triumphal arches, in a dozen native shapes, spanned every important corner, with huge iridescent dragons curling about columns, and welcomes in many languages and tints suspended in every square and thoroughfare. The enormous pink lotus, with its green leaves; strange animals, birds, and fishes, tropical fruits and flowers—floated or clung or swung on every hand. The streets were turned into tunnels, or arcades, by roofs of bright-colored stuffs and canopies of green, and at sunset a million lights flashed out in the midst, bringing into strangely glowing beauty the bats and butterflies and blossoms which by day were merely colored shapes. At night the dragons' eyes flashed fire, the crabs and lobsters took on soft, gleaming reds as the lights shone through; and strings and festoons of lanterns in every conceivable shape, like pulsating globes of red and green and yellow flame, were looped and crossed over the streets and along the house-fronts, and decorative sentiments in Chinese characters glowed in every color from a thousand corners. It was a fairy city, even more beau-

tiful, because more varied, than Japanese *matsuri* adornments.

On Sunday morning, April 21, the *Ophir* was sighted very early, and about eleven o'clock the royal party landed on Johnson's Pier, beautifully carpeted, and decorated with palms and flags for their reception. It was a brilliant scene, with the high sun blazing through a cloudless tropical sky; the Madras infantry, in thin khaki uniform and turbans, drawn up in line; and the splendid Sikh cavalry in scarlet coats and dark blue turbans galloping as guard before and after the Duke and Duchess in their carriage, while every building was hidden under flags and pennants, every window and balcony gay with spectators, and tiers of special seats around the square formed pyramids of pretty summer gowns and fair Southern faces. In the evening the guests drove down from Government house, and spent an hour or two in the Chinese quarter, whose streets had been cleared of jinrikishas and other vehicles for their passage. The most gorgeous lighting and decoration of all was reserved for this evening, and wonderfully beautiful it was. On Monday the programme was almost continuous, the most interesting, perhaps, in the morning, when the Duke and Duchess, at the Town Hall, received the addresses of loyal bodies, and the Sultans of native states were presented. The only address read was that from Singapore, in English, to which the Duke replied in a short manly speech; the native dignitaries giving written loyalty in magnificent boxes and cases of gold, silver, ivory, tortoise-shell, which corresponded in richness with their superb robes of state. After tiffin the children's celebration occurred at the big Chinese pagoda, crowned by a heroic statue of "Britannia"; and then the Duke, with a number of his suite, came over to see the polo game in the cool of the afternoon, where a fine ground, perfect horses and riders, and a sky shaded by piles of shining cumulus caused him to linger for an hour or more.

The torchlight procession, with more than sixty floats, representing every sort of characteristic native custom, with undulating dragons more than a hundred feet long, native dances, and battles of fishes, wound gorgeously through the grounds of Government House in the evening. In deference to the Court mourning, no public reception was given for presentations to their Royal Highnesses, and at all the functions ladies wore black or white only.

On Tuesday morning, 23d, the *Ophir* sailed away for Australia, amid the deafening salutes of cannon, the waving of flags, and a regatta for small boats, and with every ship in the harbor dressed from truck to waterline. To-day the decorations are being carefully taken down, and bullock-carts of lanterns and palms, inscriptions and flags file by in trustworthy charge of Kling drivers. The streets, though still picturesque, are returning to their normal aspect of shops and traffic. The great holiday is over.

MABEL LOOMIS TODD.

ART AT THE ROYAL ACADEMY.

LONDON, May, 1901.

The success of the Royal Academy seldom depends upon a question of art; and this spring, so far as the great public is concerned, M. Benjamin-Constant's portrait of Queen Victoria is the "picture of the year." None other is being quite so much discussed, and praised, and damned. It was in the Paris Exhibition last summer. There artists passed it with a shrug; it seemed a pity that a painter of M. Benjamin-Constant's ability should stoop to so paltry a device to express the dignity and splendor of royalty. In London, at the King's special command, it is hung in a centre of honor, on a wall by itself, in the midst of draperies and palms. It is the manner of its reception here that gives it its interest. It completes appropriately the history of the royal patronage of art during the Victorian period.

It was natural that, after the death of the Queen, the effort should be made to endow her with every virtue, and enthusiasts should be ready to see in her a great connoisseur, a noble patron of art, an artist herself. But in calmer moments the most loyal admit that, as some one said the other day, the life of royalty during the Victorian reign was essentially "middle-class," and appreciation of art is not a middle-class prerogative. The Queen did encourage painters and sculptors, she even dabbled in art, as she dabbled in literature, and her water-colors, etchings, and lithographs have been seen in exhibitions and at sales. The taste of the amateur, however, is not infallible, and, certainly, the Queen, with all the good will in the world, usually managed to encourage artists of least distinction, foreigners by preference. The "Painter to the Queen" has only too often been the painter unknown beyond the royal circle. From Wilkie and Winterhalter, the two most notable, to the manufacturers of the Jubilee pictures, there has not been one really great artist to do for her what Holbein did for Henry VIII., Vandyck for Charles I. The house of Hanover never continued worthily the fine traditions of the Tudors and the Stuarts. And yet, it is in the portrait by the master that the mightiest sovereign lives longest, and many hoped till the end that the Queen, to whom years had given the beauty of old age and the character developed during a long reign, would forget her natural delight in the mediocre and sit to a distinguished artist. Instead, we have as her last portrait M. Benjamin-Constant's, painted, as he explains, not from life, but from a "likeness," probably a photograph. It is said that, when finished, the portrait was submitted to the Queen, who was so pleased that she did allow him a few minutes' sitting. But there is little suggestion of this in the work itself.

M. Benjamin-Constant's Queen is a lay figure arranged in shapeless, incoherent draperies, holding a fan and handkerchief to denote the woman, crowned and seated on the throne in the House of Lords to denote the Queen. The painter has told us, in a late number of *Harper's*, how impressed he was during his visit to the House of Lords, how he there had visions of majesty. But never were visions recorded in more theatrical commonplace. The background might have been borrowed from the Lyceum, and so also might the stream of brilliant light that falls from an unseen window upon the head of the Queen and upon her golden throne. The design is without dignity, the effect without splendor. But this is the portrait offered to the public with the royal and official sanction. I have written of it at length because of the prominence given it at the Academy, and insisted upon by the King, who has already shown his active interest in art matters by this public approval of M. Benjamin-Constant and his patronage of Professor Herkomer. It looks as if British artists have not much more to expect from the present reign than from the past.

If M. Benjamin-Constant absorbs the attention of the public at the Academy, Mr. Sargent as surely attracts the artist. It seems to me it would be an advantage to Mr. Sargent not to show, during the next year or two, in the Academy, where there is danger of his losing eventually all sense of proportion. Among the anæmic Academicians, he towers a giant in physical strength and technical ability. But then, it is so easy to tower in an exhibition from which, gradually, the more accomplished outsider is being banished. Either he is rejected, or else contemptuous treatment in the past has taught him the wisdom of not submitting his work. Nothing has struck me so much this spring as the absence of men whose reputation is great abroad, and who, at home, are honored in every other gallery. I need not refer to Mr. Whistler; that is an old story. But such promising portrait-painters among the younger men as Mr. Greiffenhagen, Mr. C. H. Shannon, Mr. Steer, have no place. The Glasgow School, with one or two exceptions, have definitively ceased to expose themselves to the Academical insult. You look in vain through the catalogue for the names of landscape painters of the position of Mr. Muhrman, Mr. Peppercorn, Mr. Mura, Mr. Priestman. In a word, artists in whom Mr. Sargent might find dangerous competitors do not appear, and he has the stage to himself.

He fills it sensationally, it cannot be denied, with his portrait group of the "Daughters of A. Wertheimer, Esq." It is one of the portraits that make you fancy Mr. Sargent's studio a sort of confessional, where the unfortunate sitter can conceal no secret of race or individual character. Again, he has painted as background a quiet room, low in tones and peaceful, a few pictures on the walls, a tall Oriental jar standing to one side. He seems to have lingered tenderly over the detail; to have spent his refinement on the subdued gold of the frames, that he might bring out with greater force—brutality, I was on the point of saying—the figures of the two sisters in glowing red and white, the arm of one twined about the waist of the other, who stand, side by side, in a full, clear light. Both are painted with all Mr. Sargent's cleverness and vivacity. The open fan held by one is in itself a marvel, so audacious is its foreshortening. After the Richmonds, the Herkomers, the Oulesses, they have life and substance. But their cleverness is over-emphasized. They fairly jump at you from the canvas; that low-toned room could not possibly hold within itself two such brilliant creatures; and the self-revelation, the race-revelation, in their faces makes you turn away as if to look longer were an indiscretion. It is astonishing that Mr. Sargent can be so clever, but art is not merely cleverness. Place the portrait in the room just now consecrated to Velasquez at the Guildhall, and I am afraid it would seem but flippant and crude in the midst of the stately kings and princes and statesmen of the Spanish master. Indeed, Mr. Sargent can do better, and has done better, in a quiet half-length portrait of "Mrs. Charles Russell" that hangs opposite: a lady

in pale rose and white, standing, with her face in shadow, her elbows resting on a table close to a beautifully painted silver lamp. There is as much character expressed in the nervous face, the long thin neck, the sensitive hands, as in his more daring figures, while the canvas has the pictorial unity and restraint Mr. Sargent so often chooses to neglect. He shows several other portraits, three of men, two of family groups: the "Sir George Sitwell and His Family" having been much talked about because of the splendid rendering of tapestry and ornament in a luxuriously appointed room. But the figures seem to have been dropped by chance into the composition: the man in hunting clothes, his wife in evening gown, the two children playing on the floor, have absolutely no relation to each other.

Mr. Abbey is not very interesting this year. He has a picture of "Crusaders Sighting Jerusalem," but it is rather too obvious and theatrical in both design and color. He shows no drawings, always a reason for regret. "Subject" pictures are fewer than ever. Mr. Orchardson repeats, but on a small scale, the pale golden-toned interior he can paint so charmingly. Sir Edward Poynter and Sir Alma-Tadema are faithful to the classics, Mr. Waterhouse to myths and symbolism. Of their work little is to be said that has not been said before.

The Queen's funeral has its records; Mr. Wyllie painting the solemn pageant on water, Mr. John Charlton, the pageant in the streets of London. But both are so chilled and intimidated by the royal motive that on their canvases there is no pageant at all. It is curious to note the benumbing, paralyzing effect of royalty on the British artist of the present generation. Mr. Onslow Ford, a sculptor who has produced much that is delightful, was commissioned by the city of Manchester to design a memorial to Queen Victoria, and is showing the result in the Academy. It is on a colossal scale, in marble and bronze; but, bewildered, his one device to give majesty and might to the figure of the seated Queen is to overpower it by the voluminous flow of the royal robes that fall in billows and billows of bronze on either side, the base of the monument curving violently out to receive them. Exhausted, apparently, by this effort, he had no courage left for the upper part of the throne, which is small and insignificant, out of all proportion. A small, unpretending bust by Mr. Brock is more satisfactory, probably for the simple reason that there was less chance to go astray. But it does not inspire one to hope great things for the Victoria Memorial it is proposed to erect in London. Mr. Brock has already received the commission as sculptor, while five architects are to compete for the honor of working with him. The noise of the public dissatisfaction with this arrangement and the public demand for an open competition has probably reached America. But at one time the public protest was no less loud against Sir William Richmond's decoration of St. Paul's, and nothing has come of it; Sir William Richmond goes placidly on covering Wren's walls with his mosaics. It will probably be the same with the Victoria Memorial. The outcry has been made, no attention has been paid to it, and the competitors will remain the five appointed. To "sit tight" is the policy of the wise in England.

There is nothing else of importance in the sculpture-room, except Mr. Sargent's fine crucifix, the model for which was shown last year. The landscapes are not of very striking merit; the more ambitious they are, the less successful. Here and there you come upon a charming little study of light by Mr. Stott and Mr. Clausen, and more violent experiments by Mr. La Thangue. Mr. Thaulow, in his renderings of snow and ice and the luminous winter sky, impresses one nowhere else as so wonderful a technician; a fact easy to understand. Pleasant pastorals by Mr. Lemon also await the patient visitor who searches for them, and these are really all. It is not an encouraging year's harvest if you consider the number of Government and County Council schools, and the increasing army of artists who eke out their incomes by opening their studios to students. As for the water-colors and the black-and-white, they invite silence. N. N.

Correspondence.

THE FLOYD OBELISK.

To the Editor of The Nation:

Sir: Memorial Day in Sioux City was celebrated by a dedication. There was a procession, military and civic, with banners, songs, speeches, and prayers, on an uninhabited bluff three miles south of the city. This ceremony was before an obelisk a hundred feet high, in proportions as well as altitude reproducing the ideal hecatompedon of Karnak, which pilgrims on the Nile are content to go up so far to see. The highest word writ large on the obelisk was Floyd. Beneath was the following legend, displayed in fifteen lines:

"This shaft marks the burial place of Sergeant Charles Floyd, a member of the Lewis and Clark expedition. He died in his country's service, and was buried near this spot August 20, 1804. Graves of such men are pilgrim shrines—shrines to no class or creed confined. Erected A. D. 1900 by the Floyd Memorial Association, assisted by the United States and by the State of Iowa."

The words on the east face of this shaft declare it a memorial of the first step in providential expansion westward, and from its base, which stands one hundred and twenty-five feet above the Missouri water-level, there is a wide outlook over both Nebraska and South Dakota.

Floyd's name stands highest and on the forefront of this pillar for several reasons. He was the first soldier that died in our country's service in the trans-Missouri purchase, and was laid in the earth beneath the first cedar post marking peaceful advance by comrades who first burst through the continent to the mouth of the Columbia. He was thus a prototype and representative of millions who were to follow. The grave was revisited two years afterwards by his fellow-adventurers when homeward bound. In 1832 Catlin, the first canoe artist who sketched the great river downward from the Yellowstone, lingered nowhere so long and lovingly. At the end of seven years more, Nicollet, in charge of a Government steamer, set upright the fallen cedar post which had been placed at the new-made grave. It was fifty years after Floyd's death before any American settled near, yet in 1857, when a river flood tore away much of the burial hill, pioneers rescued the perishing skeleton and reinterred it out of harm's way backward on the same bluff. The bluff continued to be called Sergeant's, and the river entering the Missouri at its foot Floyd's—both so named by his companions; but no stone or post showed the place of the second interment.

In the ninetieth year, however, after Floyd's death, Mr. Thwaites, Secretary of the Wisconsin Historical Society, in exploring the chaos of writings garnered in Madison by his predecessor, came across a manuscript which neither he nor any one else had imagined to have ever existed at all—a journal by Floyd; an itinerary creeping in petty pace from day to day from the start up the Missouri for ninety-seven days, even to the day before his death. No sooner was this find noised abroad than Prof. J. D. Butler was invited to speak about it in Boston, before the American Antiquarian Society, at their next meeting, and the document, with his remarks, was printed in the very words of its author by the Society, both in their Proceedings (vol ix., p. 224-252), and in separates.

A rumor of this publication and then a stray copy of it reached Sioux City. If not the creator of local zeal, it was at least the match which kindled it into a blaze. It was at once followed there by study of Coues's monumental edition of Lewis & Clark, and by shame that Floyd lay without even a memorial post—indeed, that no mortal knew where he lay. It was only after much baffled but renewed endeavor that his bones were detected by coöperative search. As this find in 1895 occurred on Memorial Day, the association then formed chose that day for dedicating whatever monument they might be able to build. Meantime they enclosed the relics in a funeral-urn, on which Professor Butler laid the journal which he had come five hundred miles to bring. The urn was placed in the same grave, beneath a massive slab suitably inscribed, which proved the corner-stone of the obelisk. The journal was an acorn which, within six years, grew into a hecatompedon grander than any oak ever planted. It gave birth to a memorial standing in a park of over twenty acres, and itself surpassed by a tomb of honor over no single man less than a national President.

The function on the bluff, over before noon, was followed after dinner in the city by a speech from John A. Kasson, the Iowa diplomat, concerning the Louisiana purchase, and consequent expansion through the world of the West. In the evening, the Romance of Floyd's book was told by Professor Butler, the first charter member of the Floyd Association. He pointed out a mention, now recognized as of Floyd's MS., in the only letter dispatched to Jefferson by Lewis while on his westward way. He traced its transmission to St. Louis, to Floyd's father in Kentucky, and thence to Madison, and accounted for its remaining so long in hiding there. The year before its discovery he had argued in the *Nation* (Nos. 1478-79) that such a find was not only possible, but probable, and had urged search. He declared the autograph which he held up as a secular ostensorium to be an obelisk which Floyd, building wiser than he knew, had made for himself, and which, thanks to alphabetic letters and the art preservative, would go out into all the earth, while the stones piled in his honor must stand stationary, and would endure when they had

crumbled into the sands from which they had been conglomerated. *Forma mentis æterna.* Yet he rejoiced in the obelisk, praying that it might rival the longevity of its Egyptian model, whose years are already seven times five hundred, and might pass on as long as the testimony of the Roman obelisk which witnessed the martyr faith of Christians burned around it by Nero, and which bears the words, "Christus vivit, Christus regnat, Christus vincit, Christus vindicat suum populum ab omni malo."

The cost of this memorial was $20,000, half of it paid by the State and nation. In the judgment of its author and finisher, Capt. H. M. Chittenden, U. S. Engineers, it must have cost much more but for conditions unexpectedly auspicious. The weight of its base is 278 tons; of the superstructure, 566 tons. The material is Kettle River sandstone, which is reputed to be of perdurable toughness. X. Y. Z.

Sioux City, Iowa, June 1, 1901.

Notes.

The power of association has often been tested in the case of new illustrations for old classics, and now the Messrs. Harper announce that Mr. Peter Newell is to challenge comparison with Sir John Tenniel by furnishing designs for a fresh edition of 'Alice in Wonderland.' Our droll American does not lack courage.

Librarians who have received a prospectus of the 'Universal Classic Manuscripts,' should know that it is simply a reproduction of the 'Facsimiles of Royal, Historical, Literary, and Other Autographs,' issued by the British Museum in 1895-99, and sold at about half the price asked for this reproduction. The prospectus makes no mention of the source from which the work is drawn, and, in fact, by speaking of it as "perhaps the most important publication *inaugurated in the new century,*" distinctly conceals its source; yet the only difference is in a special introduction by S. M. Hamilton of the Bureau of Rolls, Washington.

A fourth edition in five years of Prof. Kuno Francke's 'Social Forces in German Literature' testifies to the solid worth and singularity of a work which we reviewed at considerable length on its first appearance. To conform with the English edition, the title has now been changed to 'A History of German Literature as Determined by Social Forces' (Henry Holt & Co.), and this is certainly more apt, as suggestive of the reference book rather than of the essay. Some enlargement has been effected by draughts from the author's 'Glimpses of Modern German Culture' and otherwise.

College teachers of English will be interested in a useful little book, entitled 'The Beginnings of English Literature,' by Prof. Charlton M. Lewis of Yale (Ginn & Co.). Obviously and avowedly the volume is not intended to serve as a manual of its field; its purpose is to aid in the orientation of young students who are about to approach the first-hand study of the greater English classics. Without being unduly sketchy, the treatment has been guided by commendable principles of condensation and selection. After concise introductory chapters upon "The Making of the Race" and "The Making of the Language," there are an excellent account of the more important mediæval types and tendencies of literature, a good chapter on Chaucer, and a discussion, adequate to its end, of the English writing of the fifteenth and early sixteenth century, and of the meaning of the Renaissance. The form is attractive and the substance trustworthy throughout. Literary generalizations are wisely avoided. These qualities, coupled with its copious and well-chosen extracts, should make the book valuable in the actual instruction of underclassmen.

Dr. H. Drinkwater's lectures on 'First Aid to the Injured' (London: Dent; New York: Macmillan) are excellent for laymen in the presence of accidents. However, the time-honored direction for a woman whose clothes are on fire to lie down—amended here by the vigorous injunction to the bystander, "if she is standing when you see her, catch hold of her dress-collar or her hair from behind, and pull her down backwards without warning"—may sometimes be modified by consideration of the circumstances. The danger to be avoided is the burning of the woman, not of her clothes. The clothing, therefore, should be drawn from the person, and frequently all that is required is to take her dress between the hands and draw it outward, smothering the flame by rapid friction downward and away. In incipient fires that frequently is sufficient. The little book is profusely illustrated, generally to the advantage of the text. But a scheme intended to demonstrate the circulation (fig. 9) would surely mislead the student who had no other knowledge of the situation of the lungs and other viscera than as there displayed.

The 'Philippines Military Memorandum Book and Map' is part 10 of 'The American in the Philippines,' prepared by Capt. A. von Brandis (150 East Sixty-fifth Street, New York) and to be published under due encouragement. The English is not clear, and the abbreviations are complicated. A small collection of phrases (English-Malay) implies that the Tágal is the common Malayan tongue instead of a dialect thereof. From this brick we cannot approve the monument.

The handsome privately printed volume of 'Speeches at the Lotos Club' may be regarded as a sort of appendix to the nine volumes of 'Modern Eloquence' noticed by us in a recent number of this journal. Its embellishment in portraiture surpasses that of the larger work, and, singly or in a group, commemorates the chief after-dinner speakers and local orators of this city, together with many men of letters. But, in the thirty years of the club's existence, not a few foreigners have lifted up their voices at its festivals, from Charles Kingsley, Froude, Wilkie Collins, Lord Houghton, and Tom Hughes to Minister Wu. The collection has, therefore, an international interest within the limits of club oratory.

A praiseworthy deliberateness in doing well what has to be done, produces only now part ii. of Esther Singleton's 'The Furniture of Our Forefathers' (Doubleday, Page & Co.). The full-page plates, critically described by Mr. Russell Sturgis, are beautiful selections, mostly from Pennsylvania, Virginia, and South Carolina. The frontispiece is Washington's chamber at Mount Vernon.

The sixteenth of the sumptuous Filson Club Publications (Louisville: John P. Morton & Co.) has to tell of 'Boonesborough: Its Founding, Pioneer Struggles, Indian Experiences, Transylvanian Days, and Revolutionary Annals.' The author, Mr. George W. Ranck, a well-known student of Kentucky history, has thoroughly assimilated his materials, and his narrative has the merit of lightness and readableness in an unusual degree. His style sometimes lapses into colloquialisms, but is very evenly sustained and is capable of graphic description. In an appendix he masses the most important documents, with supplementary discussions and historical data; this fills as many pages as the text, the whole being in a bold type. Beautiful photographic illustrations record all that time and nature have spared of a settlement of great promise in the first days of Kentucky white colonization, which escaped repeated attacks from the Indians, French, and British, was at one time the leading town in the then westernmost county of Virginia, and finally dwindled beyond identification by any trace of the work of man. Two springs closely related to the site have outlasted it. Daniel Boone, of course, figures largely in these pages, and his hunting relics are photographed as now preserved in Louisville.

'A Chronological Index of the Chief Events in the Foreign Intercourse of Korea' is the title of a large and attractive pamphlet of seventy pages compiled by Dr. Horace N. Allen, our American envoy in Korea, and privately printed by him in a limited edition of 300 copies. Eight pages show in outline what happened from the beginning of the Christian era to 1876, the year of the first independent treaty, while thirty-four pages are needed to name the events in detail from that point to the twentieth century. There is a complete list of Korean treaties and agreements, with lists of the foreign consuls and diplomatic officials in Korea from their first arrival. The chiefs of the Korean Foreign Office, since the establishment of the latter in 1882 (twelve years before it became a department), are named, and their number (forty-five) shows the extremely unstable tenure of office in this branch of political activity. There is, further, a list of the Commissioners of Customs in the Korean service, and one of books on Korea, with a good index. One does not have to study these Korean names very long to see that if New York has her Tammany Hall, and China her Mantchus, Japan her rival Satsuma and Choshiu clans, little Korea—now Tai-Han, and nominally an empire, with an emperor—is ruled by the Min, Pak, and Kim clans, though the Choh, Soh, and Ye families have an hereditary grip on the Treasury and appointing power. Equal in gravity to Korea's other problems—of the foreigners who are now always to be with her, and of the semi-chronic insurrection in her southern provinces—is that of her over-supply of *yang-ban* (civil and military) office-seekers, by whom the capital is kept in a state of congestion and the rest of the country in poverty.

The April Quarterly Bulletin of the American Institute of Architects (Washington) sets forth briefly the genesis of a very important movement for the embellishment of the national capital. Last year's convention of the Institute in Washington, on the hundredth anniversary of occupancy as the capital, was improved to revive the memory of L'Enfant's imposing and far-sighted scheme for the treatment of parks "and the

harmonious, utilitarian, and artistic grouping of Government structures." A committee to confer with Congress was appointed, from which has resulted a Senate resolution empowering the Senate District Committee to employ experts and draw up a scheme; the choice by the Committee, on the recommendation of the Institute, of Mr. D. H. Burnham of Chicago (the leading spirit of the World's Fair of 1893) and Mr. F. L. Olmsted, jr., as two members of a commission of three; and their selection of Mr. Charles F. McKim as their colleague. This commission, composed not more for professional weight than for perfect co-operation, has been for some two months ardently studying its vast problem, with a time-limit for its report somewhat scant, yet sufficient for a blocking out of its conception in the main details.

If such a combination of classical learning and delightful writing as M. Gaston Boissier exhibits were more common with scholars, it would no doubt help much to preserve the prestige of the study of the classics. The question, "How Tacitus Became an Historian," which M. Boissier has chosen as title for an article in the *Revue des Deux Mondes* for May 15, involves not only the intellectual development and public career of the foremost of Roman historians, but also a lucid picture of the changeful *milieu* in which he moved during the reigns of the three Flavians and the emperors immediately preceding and following them. The perfect blending of these two elements lends to M. Boissier's essay its peculiar charm.

The deplorable condition of public education in Greece is discussed with great frankness by Dr. Zagojannis, professor of pedagogy in the University of Athens, in a treatise published in the *Deutsche Zeitschrift für ausländisches Unterrichtswesen* for April. The number of classical gymnasia, in relation to the population of the country, is much larger in Greece than in Prussia; the proportion being eight to five. This superabundance of higher schools, combined with other causes set forth by the writer, results in an overproduction of scholars and candidates for office, who form the "harmful class of a learned proletariat." The schools themselves, high and low, are badly administered, and the instruction is so wretched that all that is good and rational in modern education seems to have been deliberately excluded from the land of Socrates and Plato. The politicians in Athens meddle not only with the appointment and dismissal of teachers, but also with the promotion and graduation of students.

Of the fellowships offered by the American School for Classical Study at Athens, to be competed for by students of universities and colleges of the United States, one (out of three) is held this year by a woman, Miss Agnes Baldwin, A.B., Barnard, '97. According to the easy arithmetic by which the relative ability of the sexes is usually estimated, conversely applied, this proves that women are twice as clever as men; for there are, as we find by the reports of the Bureau of Education, four times as many men as women who are students in universities and colleges in this country, and hence the right proportion of honors to go to women should be one to four instead of one to two. It would be an interesting task, by the way, for the expert arithmetician to find out, if the ratio of women to men college students was naught to infinity in 1850, and one to five in 1900, just what it will be in 1950. There are already three times as many girls as boys who finish the high-school course every year in the United States; it will probably not be long before that same proportion or something more holds for colleges.

We commend to the custodians of all small public libraries a little pamphlet from the pen of Miss M. Anna Tarbell on 'The Homefield Library: Its Work and Its Helpers,' of which a limited number will be distributed gratis on application to Miss Alice G. Chandler, Secretary of the Committee on Libraries of the Woman's Education Association, Lancaster, Mass. The instrumentality of pictures in awakening intellectual curiosity and determining the lines of development of a village library is very forcibly shown in Miss Tarbell's contagious narrative.

The education of women in Japan, under either private or governmental auspices, has not kept pace with that of men, but for several years past Mr. Naruse, formerly principal of the Baikwa Girls' School of Osaka, has been endeavoring to establish a university for women in Tokio. He was so far successful that, having secured supporters among nearly all the prominent educators of Japan, a subscription list of 150,000 yen, and a gift from the Mitsui family of over four acres of land, he began building. On the 20th of April the university was opened with 175 boarding and 325 day students. Most of these are in the preparatory department, but more than 200 have matriculated. At the opening there were present Prince Konoye, members of the Imperial Cabinet, and many eminent dignitaries. Count Okuma, Chairman of the Board of Trustees, made a noble speech which reveals clearly the secret of his great influence upon the political and social life of new Japan. Besides the commodious buildings there are two large dormitories, all the living-rooms facing the south. The students are divided into families of twenty-five each, having a separate matron, kitchen, etc. The faculty consists of forty-three teachers of all grades. Many well-known educators and specialists have promised to give lectures and instructions.

London is just now providing an illustration of the irony of events which ought to give infinite pleasure to the disciples of sardonic philosophy. Fifty years ago there was held in Hyde Park a great exhibition, which was interpreted by the statesmen, preachers, poets, and journalists of the day as the inauguration of a new era of international peace and goodwill. It was to be the first step in a process of acquaintanceship and mutual understanding between countries that had hitherto been at enmity, but that in future would know no other rivalry than in the arts of peace. This year it has been thought fitting to celebrate the jubilee of that event. Accordingly, another exhibition has just been opened in the same building, which, after the show of 1851, was removed to Sydenham, and has since been known as the Crystal Palace. With that unconscious humor which is so striking a characteristic of its present temper, the British public is now thronging the Palace to keep high commemorative festival by gazing in patriotic admiration upon—a Naval and Military Exhibition!

—The June number of *Harper's* contains an abundant supply of fiction, both of the long and short varieties. Of continued novels there are two (Gilbert Parker's "The Right of Way" and Mary E. Wilkins's "The Portion of Labor"); of stories there are half-a-dozen. The vogue which the "short story" had not long ago has declined a little, though the production seems as yet unaffected, possibly because the magazines are still drawing on supplies accumulated while the fashion was at its height. The fact is, that in the long run the novel is pretty sure to hold its own against short fiction. Only masters can write readable short stories, while the number of those who can produce novels interesting enough to pass muster is very great. When we think of short masterpieces, we think of Poe, or Hawthorne, or Stevenson. Their imitators overlook the fact that what they did in this line they did because they were masters; it does not follow that people who wish to learn how to write should publish their short-story writing—indeed, the exact opposite follows: they should avoid it. W. W. Jacobs contributes a study in this *genre* called, "In the Library." The idea is a good one—that of a murder which the murderer endeavors to shift upon the shoulders of an innocent man, while in the process he reveals his own guilt; but to our minds, clever as it is, the story is not convincing. What we feel here is not that the thing really happened (the illusion of successful fiction), but that it was imagined and worked up as a theme. Of course, we shall be told in reply that that is "art"; but it is not. Mr. Brander Matthews has a good article on "The English Language: Its Debt to King Alfred," in which he dwells on the fact that conscious nationality has usually been connected with the development of a national speech (as distinguished from dialects). It is not necessarily so, however, as we see in our own case. With all our conscious nationality—and we have it in abundance—we still speak the language of the country whose yoke we have thrown off, and boast of it.

—Mr. Goldwin Smith has, in the *Atlantic*, an article on the Duke of Wellington, apropos of Sir Herbert Maxwell's new Life. As time goes on, little additional light is shed on Wellington's career and character, principally because it was always well understood. He was not, like Napoleon, a hero to many people and a fiend incarnate to others; he was and probably always will be a typical Tory hero, and as such a national hero. He is unimaginable as an American, and the type he so thoroughly represented has passed away, even in England. Beside the Iron Duke, Balfour and Salisbury seem wishy-washy Tories. Chamberlain he would hardly have recognized in the street, unless as a matter of official duty. He went to the grave beloved by the whole English nation, though it is doubtful if he ever had much sentiment or affection for any individual English man or woman. His soldiers were not fond of him, and he had little or no interest in them. With all, however, he was the soul of honor, and courage, and truth, and loyalty, and for this he has his reward. For some reason the Reconstruction period is again attracting the attention of the magazines. Samuel W. McCall (the Massachusetts member of Congress) discusses it under the title of "Washington during Reconstruction," and leaves the matter very much where he found it, though

his paper is one of considerable ability. The fact seems to be that we knew then, and know now, that we drifted through the Reconstruction period, negro suffrage having been introduced by a legislature which did not believe in it, to "secure the results of the war" in communities firmly resolved to prevent any such security, if they could help it. The whole struggle between Johnson and Congress seems now to have been one of those things which might have been avoided; yet, at the time, the death of Lincoln brought it on with the inevitableness of fate.

—*Scribner's* contains an illustrated article on "The Scottish University," by John Grier Hibben. Scotch universities are as different from American as are the English or German institutions which go by the same name. Most of them are Catholic in origin, the University of Edinburgh alone dating from the period of the Reformation. There is a General Council, a Court, and a Senatus, a Chancellor, Vice-Chancellor, Rector, and Principal. The Council embraces not merely the university officers and professors, but the entire body of graduates. The four universities elect two members of Parliament. The Court, which is the governing body, represents not only the Senate, but the Church, the State, and the municipality. The Senate corresponds to our faculty; the Rector, elected by the undergraduates, is Chairman of the Court. The office of Principal corresponds with that of our President, though we doubt if any Principal has the powers of a university president at the present day in America. "Regarding the university as thus constituted, one is impressed with the representative character of its officers, both as individuals and in their collective capacity as governing boards." The Hon. George F. Hoar, who contributes a paper on "Oratory," declares that he is not sure that oratory is not "the single gift most to be coveted by man." It is at any rate, when found in perfection, "the highest faculty given to man." This gives to Oratory the rank which all other authorities have assigned to Reason. The article, however, contains a good deal of valuable advice to speakers. Mr. Hoar calls attention to the one great difference between ancient and modern oratory—that the classical speaker spoke once for all, and either persuaded or failed, while the great modern speech is read in cold blood in next day's newspaper by a vastly larger audience than the one to which it is immediately addressed. Therefore the great orator should, to equal in effectiveness his classical predecessor, produce a speech persuasive not only when heard, but when read. Yet a mastery of the two arts is rarely found in the same person, though Mr. Hoar gives some examples of speeches which have turned out to be both literature and oratory.

—The *Century* opens with a paper on "Working One's Way through College," by Alice K. Fallows, which contains some remarkable statistics tending to show a very great democratization of university life. The proportion of students who work their way through college, not merely by teaching, as formerly, but by all sorts of gainful occupations, from retailing potatoes to waiting on table, seems to be on the increase. At Yale, during the last ten years, the number of those receiving degrees who worked for a living while at the University is stated to have been 519; of 327 graduates last June, 15 are said to have paid their way through college unassisted, while 69 earned a large part of their expenses. This goes on, of course, side by side with a great development of luxury and expense among rich men's sons. Young men drawn from a stratum of life in which some of the occupations mentioned here have no social stigma attached to them, may find their college degree afterwards valuable in helping them to transfer themselves to a different social level. Mr. Cleveland publishes his first paper on "The Venezuelan Boundary Controversy," but does not bring the dispute down to the date of his own intervention. The article will not help on the *entente* at all. Mr. Cleveland likens some of Lord Salisbury's suggestions *in re* the boundary dispute to "the methods of the shrewd, sharp trader who demands exorbitant terms, and, with professions of amicable consideration, invites negotiations, looking for a result abundantly profitable in the large range for dicker which he has created." Whatever we may say, we do dearly love to have a crack at the aristocrats over there. An illustrated article on "The Young Men's Christian Association in Europe," and the relation of America to the work done by it in the Old World, gives a good deal of curious information. Like everything else, the Association has "expanded." From New York to Nagpur it has girdled the earth. It has a membership of 521,000, and property worth $26,000,000, three-quarters of which, however, is in the United States.

—Borrow's 'Wild Wales' has been recently reprinted in a convenient edition (Putnams), with clear type and numerous illustrations. It will be remembered that this was the last important work of a man whose writings form chapters of one long autobiography. Birrell, who is a true Borrovian, calls 'Wild Wales' an arrant piece of book-making, and it undeniably lacks the freshness of 'Lavengro' or the 'Bible in Spain.' Yet it has fine passages, and for those who take delight in Borrow's singular personality it has the merit of being characteristic. Love of ale, fondness for the Church of England, the weakness of a self-educated man for showing off his erudition, a hobby for the study of Celtic languages—these do not seem to be the most promising elements out of which to construct an entertaining volume. When one adds the further ingredient of a crabbedness which had sprung in part from disappointed ambition (though also well rooted in nature), the list appears even less promising. Yet Borrow had an essentially sound heart, which animated him even in days when his prospects and his hopes were clouded. 'Wild Wales' can hardly be called, in Landor's phrase, "last fruit from an old tree." It is too vigorous for that. The season may be past summer, but it has not reached the time of autumn frosts. The book is marked by Borrow's telling style, and, though it contains dull passages, much of it has an excellent quality. Seldom has so clever a motto been chosen as the lines which stand on the title-page:

> "Their Lord they shall praise,
> Their language they shall keep,
> Their land they shall lose,
> Except wild Wales."

—Every scholar who, for his entertainment, reads Lucian of Samosata will form his own peculiar conception of that brilliant sophist, the barbarian who wrote better Greek than any of his contemporaries; the Asiatic who mocked at Oriental superstitions, and sought eagerly, though always superficially and in vain, for truth. The extracts from Lucian's works translated in the volume entitled 'A Second-Century Satirist: Dialogues and Stories from Lucian of Samosata,' by W. D. Sheldon (Philadelphia: Drexel Biddle), occupies itself with the lighter side of Lucian, the 'Dialogues of the Gods,' 'Dialogues of the Dead,' and Satires on the Philosophers. The title is to some extent misleading. Lucian was certainly a satirist, but he was, above all, a sophist; he belonged by taste and training to that brilliant, showy school of later Greek sophists who dominated Greek life and education in the Greco-Roman period; and, without a parallel study of the works of his brother sophists, much of the significance of his life and writings is lost. That is usually the weak point in a popular treatment of Lucian, that his biographers isolate him. Mr. Sheldon is no exception to this rule, but his one-sided version is excusable because his book consists merely of selections from Lucian's lighter vein. Lucian is almost as hard as Dickens to translate. Mr. Sheldon's colloquial, slangy English, with its abundant sprinkling of pure Americanisms, is well enough adapted to bring home to the English reader that he is missing much in putting up with a second-hand version; and that is one of the aims of a translation. The numerous notes are of a purely elementary character, and supply the place of a classical dictionary. The book itself suffers from the poor quality of print and paper. It contains about 450 pages of translations from Lucian, and can be heartily recommended to the general reader.

A CRITIC OF THE CRITICS.

Ephemera Critica: Plain Truths about Current Literature. By John Churton Collins. E. P. Dutton & Co.

The degradation of literature is one of the facts of the present day impossible to ignore. It was not reserved for the author of the volume before us to discover the triumph of the "average man" in a field where a high order of intelligence and training, fearless honesty, and a perfectly impersonal point of view, ought to be considered indispensable. Aristotle said that it was the audience that had demoralized the poets of his day, and probably the decadence of criticism is due in great part to that popular scapegoat "the rush of modern life," to the vast hurrying public that has time only for what will entertain, distract, please the æsthetic sense for the moment, that prefers literature which can be tossed aside and forgotten as soon as read. The average reader likes his criticism flavored with personal gossip and a reproduction of the handwriting, portrait, and dwelling of the talented author; he is above all a tolerant reader, so that, log-rolling and mutual admiration apart, the fear of being thought "unkind" restrains many a critic from speaking the plain truth.

No such shrinking is to be observed in the demeanor of Mr. Churton Collins. In these essays, mainly reprints of reviews that appeared in the *Saturday Review* and the *Pall Mall Gazette*, we welcome the fearless speech

and unerring scholarship that have raised Mr. Collins above the mediocrity of the modern English-speaking critic. When this rare combination of literary honesty, good taste, and sound learning is effected, a classic in the literature of criticism may be hoped for, and, as in the case of Matthew Arnold's 'On the Art of Translating Homer,' a touchstone found to which the man of letters can safely appeal. How great a service is thereby rendered to literature can best be appreciated if one reckons up the few volumes dealing with the principles of criticism that might be placed on the same shelf with Aristotle's 'Poetics' and the 'Treatise on the Sublime.' The budding minor poet who can securely count on reading in the next issue of some "critical" journal that he has more passion than Tennyson and a perfection of form that rivals Keats, will tell you that the literature of criticism is not "creative" work. How many works of "creative" literature, in prose and in verse, that have received the intemperate praise of the current reviews of the last few years, would we not cheerfully exchange for such another volume of criticism as this of Mr. Churton Collins. It should sound like a trumpet-call in the ears of the slothful and cowardly reviewer whose trade is to write puffs that contain no word of criticism, in language that would be hyperbole if applied to Shakspere or Shelley. But it would be of little use to invite such "critics" to read this book; criticism is a trade, one has one's editor to please and the public, which prefers enthusiastic eulogy to the plain truth. It was not of the twentieth-century bookseller or reader that Horace thought when he said that gods, men, and booksellers abhor a minor poet. He could not foresee that judicious advertisements of "Opinions of the Press," "partly dithyramb and partly rhetoric," would to-day carry into a second edition books that, twenty-five years ago, no publisher would have risked producing, unless at the writer's expense.

The essays in which Mr. Collins exposes the prevailing type of reviewer are "The Present Functions of Criticism," reprinted from the *Quarterly*, and the "New Criticism." The latter is an entertaining discussion of Mr. Le Gallienne's claims to pose as "critic" of such books as Pater's 'Plato and Platonism' or Dr. Wharton's 'Sappho.' "To any acquaintance with the principles of criticism," says Mr. Collins (p. 152), "to any conception of criticism in relation to principles, to any learning, to any scholarship, to any knowledge of the history of literature, and of the masterpieces of literature, either in our own language or in other languages, he has not the smallest pretension." "Criticism is the art of praise," said Mr. Le Gallienne in his innocent desire to please; "a man is born cultured." "What matters it that one does not remember or even has never read great writers?" It only matters if, with this negative equipment, one should venture to estimate the work of scholars, and one's "sickly and nauseous compound of preciosity and sentimentalism" (p. 155) should fall into the hands of Mr. Churton Collins.

It must not be supposed that all these essays are wholly polemical. The appreciation of Mr. Sidney Lee's 'Life of Shakespeare' or of Professor Butcher's 'Some Aspects of the Greek Genius' is in a very different vein. But, the aim of the book being to collect some plain truths of criticism and to perform a duty that the incompetent or too tolerant reviewer usually shirks, the atmosphere is necessarily none too gracious. In fact, these admirable essays would have been far more effective had not Mr. Collins too often betrayed an irritation, an "exasperation," to use his own word, that ought to be absent from the judgments of the ideal critic. Sydney Smith said that all Greek scholars were apt to be rude and violent, unless, indeed, they happened to be Bishops; it is this exasperated consciousness of other men's defects that leads to the fierce manner of Mr. Collins. A sense of humor, such as Mr. Andrew Lang possesses, would have tempered his violence, but then it might have kept him, as it keeps Mr. Lang, out of the field. At any rate, after a few pages of steady vituperation, however well deserved, one's sympathies inevitably shift to the victim. In the case of Mr. Saintsbury, for instance, Mr. Collins proves every point by citation, but when he goes on to accuse a painstaking student of literature of "indifference to all that should be dear to the scholar," of "mingled coarseness, triviality, and dogmatism," finally of "offensive vulgarity," we feel that criticism is degenerating into personal attack, and the luxury of telling the truth has become license. Mr. Collins will probably antagonize Stevenson's many admirers by his over-harsh verdict, here reprinted, on the 'Letters,' and we cannot share his regret that they were given to the world, even though they undoubtedly "present Stevenson for the most part in dishabille" and even, sometimes, "very greatly to his disadvantage."

Mr. Collins's three papers on "English Literature at the Universities" reveal the complete failure of the School of English Language and Literature at Oxford to satisfy the demands of the representatives of either literature or language. They may be read with profit by those who have been encouraged by the advertisement of this new "School" to pursue their studies in English at Oxford. In such reviews as the "Catullus and Lesbia," the "Women in Greek Poetry," and "Landscape in Poetry," Mr. Collins is at his best, a scholar without pedantry, who wears his weight of learning lightly, unless it proves necessary to crush with it some ignorant aspirant to belles-lettres—a domain for which Mr. Collins is justified in claiming the same solidarity that exists for the activities of science.

"Science stands where it does, not simply by virtue of the genius, the industry, the example of its most distinguished representatives, but because by those representatives the whole sphere of its activity is being directed and controlled. The care of the universities, the care of learned societies, the care of devoted enthusiasts, its interests and honor are watchfully and jealously guarded. . . . It is far otherwise with literature. Those who represent it, in a sense analogous to that in which the men who have been referred to represent science, have neither voice nor influence in its organization. . . . As examples, few follow them; as counsellors, no one heeds them."

A partial remedy for this state of things Mr. Collins would provide by placing the study of literature at the universities on a proper footing. He gives specimens of "the kind of works which the occupants of distinguished chairs of literature can, with perfect impunity, address to students," and the display is certainly lamentable.

In all, the book contains twenty-eight essays of varying length, all interesting, many most valuable to the student of comparative literature. Mr. Collins admirably illustrates the truth, well known, but not enough emphasized, that it is impossible to attain an adequate knowledge of English literature without a sound basis of classical scholarship. His victims have laid themselves open to attack in most cases by their ignorance of the sources of the works they presume to criticise and estimate. Mr. Collins himself says (p. 61):

"It is not merely in tracing the development and explaining the peculiarities generally of our prose and of our poetry that competent classical scholarship is indispensable. Is it not notorious that, in each generation, from Spenser to Tennyson, from More to Froude, our leading poets and prose writers have been, with very few exceptions, men nourished on classical literature and saturated with its influence? Many entire masterpieces . . . are simply unintelligible . . . except to classical scholars. Take, for example, the 'Faerie Queen' and the 'Hymns' of Spenser; Milton's 'Paradise Lost,' 'Comus,' 'Lycidas,' and 'Samson Agonistes'; Pope's satires; the two great odes of Gray; Collins's Odes to Fear and the Passions; Wordsworth's great 'Ode,' and his 'Laodamia'; Shelley's 'Adonais,' and his 'Prometheus Unbound'; Landor's 'Hellenics,' much of the poetry of Tennyson, Browning, and Matthew Arnold. Indeed, it would be as preposterous to attempt any critical study of our literature without reference to the ancients as it would be for a man to set up as an interpreter in Roman literature without reference to the Greek."

Mr. Collins had a duty to perform that did not demand any special grace of language. His style is terse, vigorous, and direct, as befits one who is more intent on matter than on form. Here and there we have noted a slip. Regrettable lapses in a work that lays such stress on accurate scholarship are the wrong breathings in the Greek motto on the title-page, the wrong accent on p. 311, and, what we found very confusing, an inaccurate table of contents from Essay VIII. to the end, the reference numbers for the remaining twenty Essays all being incorrect.

THORPE'S CONSTITUTIONAL HISTORY OF THE UNITED STATES.

The Constitutional History of the United States. By Francis Newton Thorpe. 3 vols. Chicago: Callaghan & Co. 1901. Pp. 595, 685, 718.

The present work is at once a supplement to and a continuation of the author's 'Constitutional History of the American People,' reviewed at length in these columns on its publication in 1898. The earlier work, while tracing rapidly the origin and development of the more important political principles characteristic of the American form of government, laid chief stress on the application of those principles by the States; and a number of States which the author regarded as typical were selected for especially detailed treatment. The volumes now before us treat the same general subject from the standpoint of the nation, though still with much regard for State attitudes on important questions. The former work began with 1776 and stopped with 1850; the present one begins with 1765 and comes down nominally to 1895. Mr. Thorpe's volumes are thus the only attempt to cover, in a thorough way, the whole course of our Constitutional history

from the beginning of the movement for independence to the present time.

The distribution of space in these three substantial volumes is instructive. The first eight chapters of the first volume deal with the period from 1765 to the meeting of the Federal Convention in 1787, while the nine chapters following are devoted to the formation of the Constitution. Seven chapters of the second volume are given to the ratification of the Constitution and the framing and adoption of the first twelve amendments; the remaining seven chapters sufficing for the exposition of the rest of our Constitutional history between 1789 and 1861. Of the twelve chapters of volume three, two are devoted to the discussion of emancipation in the States, three to the history of the thirteenth amendment, the same number to the fourteenth amendment, and two to the fifteenth amendment; a chapter on the sources of the Constitution and another on recent Constitutional decisions bringing the work to a close.

Only a cursory reading of Mr. Thorpe's book is necessary to show that its method is essentially the same as that of the earlier work. Here, as there, Constitutional history is to Mr. Thorpe primarily the history of a document, the evolution of a form of words. The painstaking labor whose evidences are everywhere abundant, has produced a piece of textual criticism more elaborate than any previous writer has attempted, and of undoubted value for scholars; but it is Constitutional history of the narrowest sort only. Mr. Thorpe fairly races over the parts of his subject that do not bear immediately on his task of documentary exposition, as witness chapters i. and ii. of book iv., volume ii, in which 118 pages suffice to carry him from 1789 to 1850. Beyond all question, the events crowded into those first sixty years were of the utmost importance for the history of our Constitutional development, to say nothing of their influence in arousing and shaping public opinion; but we have searched Mr. Thorpe's learned pages in vain for any new light on the general significance of those events, or any indication that the incidents of times in which there did not happen to be a Constitutional amendment under discussion are, for the Constitutional historian, worthy of particular study. To have written of the history of the United States between 1861 and 1865, also, with only here and there a reference to the war, and of reconstruction with but a single incidental allusion to President Johnson's impeachment, is certainly a feat of historical composition; but this is what Mr. Thorpe has nevertheless done.

This is the limitation, not only of Mr. Thorpe's book, but of his method as an historian as well; and we can but regard the limitation as a serious one. Experienced members of Congress have often remarked that Washington is about the worst place in the United States from which to learn what people are thinking about. The enveloping presence of governmental machinery and the incessant bustle and stir of official life create something of a world apart, and give little opportunity to note the effects of Congressional action on public opinion, and little facility for weighing accurately the social and political forces of the time. Some such confinement of view, we think, must inevitably come to characterize the historian who undertakes to write his story from the official records of legislative and executive proceedings. One sees, indeed, step by step, the process of framing a statute, and hears this member and that argue and discourse. One can con the votes and draw instructive conclusions from the geographical distribution of their elements. But the tone and temper of outside opinion, and the influence of a watchful and not too kindly public, while often profoundly modifying the course of legislation, do not always appear distinctly labelled in Senate and House; and the yielding of members to the feeling of their constituents cannot always be detected in debate. Into this pitfall of narrowness we can but think that Mr. Thorpe has fallen. His history of reconstruction—typical of the whole—is very much the sort of history that might have been written by one who had been shut up during the whole period in the Capitol building at Washington, who had heard or read all of the debates, and who had occupied his leisure with a diligent study of the reports of State conventions and the documents printed by order of the two houses. Undoubtedly, the knowledge of such a person would be singularly intimate and, if well presented, extremely important, but his outlook upon the period would unquestionably appear narrow and confined.

So far as the period which ends with 1860-'61 is concerned, it cannot be said that Mr. Thorpe spreads before us much that is new. There is an unusual wealth of detail, in both text and footnotes, regarding the topics treated, and abundant proof of painstaking work among the primary sources, but neither in positive information nor in points of view is the result notable. The chapter on the sources of the Constitution, introduced at the end of the work apparently as a sort of summary, is the most elaborate setting forth of the historical origin of the words and phrases of that instrument yet attempted, and ought, we should suppose, to be final. For the period since 1861, Mr. Thorpe's work fills a unique place, and possesses great value. No writer has set forth so fully the results of an exhaustive study of the debates in Congress during the civil war and reconstruction and of the process of reconstruction in the States; and while the pages upon pages of abstracts of debates are tedious reading, we fancy that students and writers will be grateful to Mr. Thorpe for the patience with which he has labored in a difficult and unfamiliar field. To be sure, the author most commonly takes the material as he finds it, and goes straight ahead with the condensation of it, rarely stopping to summarize events or show the relations of things. As a consequence, the volumes are hard, dry reading, and fail often to leave a clear impression, at the end of a long section, of what the controversy was all about; but Mr. Thorpe's consistent rejection of whatever does not bear on the history of the Constitution as a document may, perhaps, account for this, while even in its present form the work is undeniably a great achievement, and distinctly useful. If only the narrative could have been given some of the illumination which reveals the historian who has mastered and absorbed his material rather than merely systematically accumulated it, Mr. Thorpe's place in the first rank of American historians might very possibly have been assured.

The footnotes everywhere bear out the author's claim to main reliance on primary sources. The citation of titles seems needlessly precise, few of the authorities used being so unfamiliar as to warrant the quoting of an entire title-page when introducing them. As would be expected after what has been said of the nature of the work, the authorities cited are, with scarcely an exception, journals, debates, statutes, and reports of Constitutional conventions. The style, nowhere particularly interesting, is not seldom careless, and is not rendered more attractive by the persistently erratic punctuation. There is an elaborate index.

Russian Life in Town and Country. By Francis H. E. Palmer. G. P. Putnam's Sons.

Mr. Palmer's contribution to the series, "Our European Neighbors," is a thoroughly delightful addition to the long list of books on Russia by foreigners. It fills in many a nook and cranny, illumines many an obscure point, in other people's writings, because the author is competent to discuss real Russian life—the life of the remote estates—from personal observation. Thus, for example, when he enumerates the duties which fall so heavily upon the shoulders of the lady of the manor and her daughters, and explains how various national viands, the winter store of provisions, are prepared, and the peasants superintended, we involuntarily recall Gogol's 'Old-Fashioned Farmers.' Not because Mr. Palmer undertakes to tell an affecting tale, or because the Homeric feasting of Gogol's elderly hero and heroine are duplicated; on the contrary, every-day practicalness, and labor so energetic that no time is left to enjoy the good things of life for months together in summer, are what he presents to our view. But he makes the reader understand the truth of Gogol's story, its essentially national character, by showing that the great author's old woman, with her remarkable housewifely accomplishments, is matched by the fashionable society women; while the corresponding set of men are equally good managers of their estates (in many instances). Moreover, he makes one realize the existence of the capable, hard-working nobles of the less wealthy class, who are forced by circumstances to live the year round on their estates—a thing which the late Alexander III. wisely advised his nobles all to do, recognizing the value to the country of such influence on the rustic masses. Turgeneff's and Tolstoy's pictures of country life also acquire fresh vividness when read in the light of the intimate details furnished by Mr. Palmer.

He has some chapters, on the relations of Jews to Russians, and on the vexed Jewish question, which will certainly prove revelations to many readers, enforced as they are by illustrative anecdotes of occurrences that have come under the personal observation of the author and his friends, or have been known to the general public, like the one narrated on page 153. Indeed, an especially valuable feature of the book lies in such anecdotes, and the sober, unbiassed character of all statements made by the author, whether they concern Russians or foreigners. Particularly interesting are the chapters on the "Urban Working-Classes" and "Industrial Coöperative Associations," for those who wish to study the condition of the peasants more fully than the more common

details as to their life in the country districts (which, also, is not neglected in this volume) permit.

Perhaps it is natural that some errors, on points not usually much studied by foreigners, should have crept in. For example (p. 69), the assertion is made that, if a priest's wife should die, he is obliged, by the laws of the Church, to retire to a monastery for the rest of his existence. This used to be the rule, three hundred years ago. At the present day, a widower-priest may remain with his parish if his conduct be good; if it is not, he is sent to a monastery to reflect, for a while, and is then given a fresh trial. Final, compulsory retirement to a monastery occurs only when this second trial has proved that the parish is better without him. On page 120, the explanation of the ancient merchant class, *Ghosti*, or *Guests*, is not quite accurate. These *Guests* were not so much foreigners as Russians who paid the highest trade-tax, and so were permitted to traffic in foreign lands. The famous Epic Song, of the Novgorod Cycle, "Sadkó, the Rich Guest [Merchant] of Novgorod," may be cited in support of this—the usual explanation of the experts in antique lore. Incidentally, on page 121, we may point out, the origin of the passport system—a perfectly natural and sensible one—is clearly stated; just as the natural and rational origin of serfdom has been pointed out elsewhere—though, it must be noted, without the historical clause which should accompany it, concerning the enactments of Boris Godunoff, and his successors on the throne, with the imperative national reasons therefor. Then, again, in his remarks, historical in character, about the Russian Church, the author unintentionally contradicts himself by making the title of the highest ecclesiastical authority, whose office was abolished by Peter the Great, the "Metropolitan" (instead of "Patriarch"); and afterwards making mention of the Metropolitans who exist at the present day. On page 224, and, in general, throughout the chapter on "The Russian Dissenters," Mr. Palmer does not make his meaning entirely clear. The *raskolniki* did not spring into existence during the reign of Peter the Great, in consequence of that monarch's high-handed decree that beards must be shaved off, and the like; but they originated under Tzar Alexei Mikhailovitch, half a century previously, because of the corrections in the service-books of the Church. Something of this is mentioned, but in a way which is not clear to the student fresh to the subject.

In the chapter entitled "Town Society," the foreigner who cherishes the idea that freedom of speech is unknown in Russia, will find food for thought; and in that on "Education and the Army" sincere inquirers will find proof that even compulsory military service may be turned to good account for the arts of peace. In the chapter on "Religious Thought and Ritual" a typographical error makes the Water-Sprite's Russian name read *Vodiamy* instead of *Vodianoy*, a number of times. Otherwise the presswork is up to the level of the Knickerbocker Press. There are a number of interesting illustrations, several made by the author; and a good glossary of the Russian words used in the text is thoughtfully supplied. There is so much that is eminently quotable, so much that is not only interesting but valuable in this little volume, that we will refrain from further specific details, and commend it most cordially to the general public as well as to students of Russian life.

Under Tops'ls and Tents. By Cyrus Townsend Brady. Charles Scribner's Sons.

A Sack of Shakings. By Frank T. Bullen, F.R.S. McClure, Phillips & Co.

Marryat in fiction has made us familiar with the English midshipman, that joyous, buoyant, rollicking youngster, for ever in scrapes, and equally daring in love and war. Mr. Brady, in 'Under Tops'ls,' freed from the fictitious envelope and from padding, has done as much, and as well, for the American "middy." He shows us that the type has not become modified through changed conditions; that the atmosphere in which he is trained and lives develops spontaneously the qualities which Marryat ascribes to natural inheritance. The author, in his delineation of the midshipman at Annapolis and on the practice-ships, reveals an exceptionally acute sense of humor. To this he gives expression on almost every page of the book. Moreover, his style lends itself most felicitously to the treatment of a subject which calls for lightness of touch and vivacious flow of narrative.

In the first part of the volume, entitled "Where Admirals Are Made," under the heading of "Ashore" we have an account of the training in the academic department of the Naval Academy. This is interesting and full of humorous touches. It is in this section that Mr. Brady recalls one of the bravest and most heroic characters ever graduated from the school, Philo Norton McGiffin of Pennsylvania, a classmate of the author. In these times when the newspapers produce a new "hero" every day, McGiffin is forgotten; but if he had accomplished the same feats on an American battle-ship that he performed as commander of the Chinese battle-ship *Chen Yuen* at the naval battle of the Yalu, the hysterical resources of our people—which are large—would have been strained to the limit of emotional collapse. As it was, he died practically neglected—so far as public interest in him was concerned—at a hospital, from the effect of his wounds. Mr. Brady has done full justice to the bravery and merits of McGiffin. For this he deserves the thanks of every admirer of modest and genuine heroism.

It is in the chapters devoted to life afloat, on the practice-ships, that the author gives us the best pictures of the middy's happy nature and resourceful qualities. This portion of the volume is fertile in illustrative incidents. One in particular depicts, in reality, the imperturbable coolness which popular imagination ascribes to all naval officers. It will be the more appreciated by those who know a ship and have acquaintance with the cast-iron rigidity of naval etiquette. On the practice-ship *Constellation* the bridge, on which is stationed the officer of the deck, is well aft, just forward of the mizzen-mast. It is usually covered with an awning. A middy on the cro'-jack-yard, thirty feet more or less aloft, lost his handhold and foothold and tumbled off. Fortunately, he landed in a sitting position on top of the awning, thence bounded to the deck, where he brought up squarely on both feet. "The officer in charge looked over the rail and gazed gravely down at the dazed middy, who instinctively saluted, and reported: 'I have come on deck, sir!' "—the academic formula appropriate to the occasion.

" 'So I see,' replied the officer with rising choler; 'but I would have you know, sir, that the quarterdeck is not to be invaded in this unceremonious manner. Did you fall or did you jump?'

" 'I—I fell, sir!' gasped the middy weakly.

" 'It is a good thing for you that you did, sir! Go forward!' "

Another amusing episode relates to the negro steward of the *Constellation*, Pinckney by name. Born to the navy, he knew no other life. Experience had accustomed him to every device for tormenting humanity that a middy's ingenuity could devise; but on this particular cruise of the ship he was confronted with a situation so new, unexpected, and to him audacious, that his usual craft almost failed him. It was the custom of Pinckney to lay in at every port a stock of pies, which he sold to the middies at extravagant prices. As the youngsters are allowed only $1 a month for spending money, this does not go very far in the purchase of luxuries. On one occasion, when they were bankrupt, it became a serious question how to levy on Pinckney's pies. His terms were strictly cash, or its equivalent in easily convertible assets. In this emergency, it was discovered that one of the middies was the owner of a $20 gold piece; how he got it, and, more particularly, how he managed to keep it, was a mystery which puzzled the acutest intellects of the berth-deck. There it was, however, tangible and in possession, and a plan was quickly devised to "do" Pinckney. The owner of the double-eagle was instructed to tender it to the darky in payment for a twenty-five-cent pie. He, of course, could not change it, and, accordingly, "marked it down." The rest was easy, the gold piece went from hand to hand every time a middy wanted a pie, and Pinckney, still unable to change the coin, was obliged to continue to "mark it down." Some immense bills were accumulated and a carnival of pie "on tick" reigned on the berth-deck. Finally, in utter despair, Pinckney went to the Paymaster and borrowed some change.

"Like Bre'r Rabbit he laid low about it. The middy against whom he had the largest bill came up smilingly and tendered the double-eagle as usual; but, to his horror, the darkey, chuckling with glee, changed the coin."

This catastrophe caused a veritable panic on the berth-deck. The next thing was how to "get square" with Pinckney. The opportunity was not long delayed; but see the book.

Mr. Brady, upon resigning from the naval service, tried several vocations; but ultimately he became an Episcopal clergyman (a profession from which he has just withdrawn to devote himself to literature). In this capacity he served as chaplain of a Pennsylvania regiment of volunteers, for three months, during the Spanish-American war. In "Out with the United States Volunteers"—forming the second part of the volume—he gives his experiences in the army. They are marked by the same sense of the ludicrous as are his reminiscences of the Naval Academy, tempered by the responsibilities of his position and the shock caused him by the ravages of disease, in the camp at Chickamagua, of which he was eye-witness. "Stories of Army and Navy Life"—the third

part of the book—do not call for any special comment.

"Shakings" are odds and ends of rope and canvas accumulated on board ship during a voyage. The title which Mr. Bullen has given to his book is an appropriate one, as it is made up of slight, brief marine sketches, each of which, in turn, has done service in some periodical. Assemblage under a single cover does not detract from their interest. Mr. Bullen leans rather towards the grim and sombre in his tales of the sea; he treats of the ocean in its more melancholy moods. As to ships and their ways and the idiosyncrasies of the sailorman he is thoroughly well informed. There are two articles in the volume which deserve more extended treatment—"A Battleship of To-day" and "The Polity of a Battleship." The exceptional opportunity afforded Mr. Bullen to write more exhaustively of these topics he has failed to avail himself of. What he tells us conveys only an impression, whereas had he written at greater length and with more fulness of detail, he would have satisfied a desire which his brevity quenches only too quickly.

Italy To-Day. By Bolton King and Thomas Okey. London: James Nisbet & Co. 1901.

The principal Latin nations are getting their full share of studious attention from serious critics. Mr. Bodley quite recently informed France as to the conclusions which her life and political activity suggest to a not unsympathetic neighbor; and now Mr. Bolton King performs the same friendly office for Italy by supplementing his excellent history of Italian unity with a very careful exposition of the economical, political, and social consequences which the new order of things has brought about. A formidable array of prominent Italian names, whose owners were either consulted or interviewed, and a bibliography, testify to the accuracy and thoroughness with which the inquiry was conducted.

The first four chapters are devoted to setting forth the nature and relations of the various political parties in Italy, with the resulting confusion in purpose and action. Throughout this part of the work the criticism is unsparing and at times even harsh. It is true that the leader who involved his country in the disaster of Adowa deserved to pay for it with his person, in the form of lasting discredit; but the strictures (p. 3, etc.) lavished upon him here suggest hitting a man already quite down. Speaking of the Italian Chamber of Deputies, the authors insist that its relatively ineffective character depends on the political laxity of individual members, but distribute even-handed justice in the declaration (p. 25) that the Chamber "has fewer Parliamentary guinea-pigs than the House of Commons. . . . There is far less manipulation of tariffs for private ends than in the United States, no more bribery of localities than in Canada." At this rate, few withers are left unwrung. It is to the Socialist party (p. 67) and its programme of reform, which is being actively pushed, that Italy must look not merely for consistent honesty of endeavor, but for the defence of Constitutional rights; the more practical members of that now definitely organized party have shaken off all suspicion of alliance with Anarchism, and express no disturbing views regarding private ownership of property. We need hardly add that Mr. King does not expect any solution of questions from the Vatican party, in spite of recent coquetting with socialistic generalities.

The heart of the subject is reached with chapter vi., which begins a most minutely verified investigation into the one fundamental problem of Italian life, namely, economic conditions. Tables are given of the ratio between income and expenses in various classes of society, chiefly artisans and laborers; here it is that economic pressure is, in Italy, most severely felt. In the matter of food, we are disposed to think that even Mr. King's estimates relative to quantity and kind are often over, rather than under, the average; "the terrible permanent lack of food" (p. 131) can hardly be exaggerated. Every observant traveller can verify the utter disproportion of work and wage. For example, two girls in southern Italy work at carrying baskets of earth on their heads from the loam-deposits near the shore to the terraced gardens one hundred yards up the hillside—ten loads in the morning, ten in the afternoon; wages, one sou a load, and a plate of maccaroni at midday. As to the general use of wine, we are under the impression that the poorer peasants, who help to make it, drink habitually but little of it, except during harvest-time, or when unusual physical exertion calls for stimulants; on festal occasions there is naturally a little extravagance. The one exception is, to our knowledge, Sardinia, where every one appears to use wine freely at all times, but without excess.

Manufactures and trade in Italy might with good reason call for ampler treatment than a single chapter of thirteen pages; but the interest of the collaborators to this volume is obviously with the agricultural activities of the country. In this connection Italian landlords are here presented as caring in general but little for the well-being of those whom they employ, and thus as in great measure responsible for the widespread distress of the peasantry, for whom the principal direction of hope seems to be the route to South America. The chapter entitled "Greater Italy" thus becomes much the most suggestive and interesting in the whole of this valuable work. Not only is it shown that the returned emigrant (66,000 in 1898) tends to leaven the ideas and improve the condition of his native village, but the thrift and industry which accompany him across the ocean have already given to the permanent element of his race in the Argentine Republic a measure of wealth and influence which it behooves the administrator at home to bear constantly in mind (pp. 314-321).

To the severe arraignment of the Italian system of education and its alleged failure, some exception may be taken. While admitting the vast amount of illiteracy among the poor, and the too common tendency to mere credential-hunting on the part of the middle classes, a tolerably large acquaintance with the varied personnel of those who live by teaching in Italy may lead one to very different conclusions. In the village schools, often taught by young women, the programme, however elementary, is for the most part very faithfully and accurately carried out; while the average quality of teaching in the *liceo* and *ginnasio* is surprisingly high. To verify this implies the exceptional favor of attendance in person at lesson or lecture. As regards the universities, the weak point is admittedly the total absence of discipline under the system of absolutely free "electives." It should, however, be added that the lectures of distinguished professors are invariably listened to by crowds of students, and with unfailing respect.

Although the authors of this volume resolutely avoid discussion of "the inner life and thought of another country," it may yet be held that the extremely sketchy final chapter, which treats of contemporary Italian fiction and poetry, does in some sense strive to get at these undeniably elusive facts. Now, it happens that, of prominent European nations, Italy reveals less of her actual condition through contemporary imaginative literature than any other; her great men (and women) of letters have either inherited a national and largely classical tradition, or have adopted the conceptions and procedure of their Gallic neighbors. Not even in Fogazzaro and De Amicis (and certainly not in D'Annunzio) can the outsider obtain more than a glimpse of the earnestness, patience, and lovableness which endear the Italian to those who know him well. Moreover, avoidance here of discussion of national characteristics seems to have involved suppression of some of their manifestations in the saddening records of criminal statistics, for an outline of which we would willingly sacrifice the above chapter. And the inquiry into political and economic conditions would lose nothing through an attempt to explain why the thrifty Italian, so careful of his own (*il suo particolare*, the Neapolitans call it), too often establishes his political record as a promoter of reckless, useless prodigality.

The solution at which the authors arrive will not recommend itself to the more ambitious element in Italy, seeing that there is involved a reduction of military expenditure and a virtual withdrawal from the decisive deliberations of the world's great councils. It is hard, after thirty years' striving of *Risorgimento*, to be told (by a foreigner) that the future of one's country is in the immigrants abroad and in modest self-suppression at home. But the publication of this volume shows, at all events, that Italy no longer "siede in terra negletta e sconsolata."

The Care of the Consumptive. By C. F. Gardiner, M.D. Putnams.

Tuberculosis: Its Nature, Prevention, and Treatment. By Alfred Hillier, M.D. Cassell & Co.

Tuberculosis, and How to Combat It. By S. A. Knopf, M.D. New York: M. F. Firestack.

Among books whose efficient motive is difficult to determine are those discussing particular diseases in popular language. Some are addressed to the physician, but depend for circulation upon the patient. Others, nominally for the patient, are written over his head. Together, they make an epicene variety that is neither flesh, fowl, nor good red herring. A notable exception is Dr. Gardiner's 'Care of the Consumptive.' Beginning with the beginning, it explains, without going into pathological details, how the consumptive is ill, and lays down general and special directions that enable him to follow and to appreciate the doctor's orders. It deals with universal truths, but it concentrates them into a special plea for the beatific climate of Colorado as a sanita-

rium. There is little reason, therefore, for the incorporation, without explanation, of five or six pages from an English treatise referring to English conditions (p. 112 *et seq.*). Perhaps it is English predilection which fixed 68 degrees as the maximum temperature a Colorado room should attain (p. 118). Colorado has an enormous sanitary area, from Fort Collins and Greeley on the north to Trinidad on the south of its eastern slope, with the less-known Grand Junction and Durango on the western and southwestern borders. But the climatic centre about which the volume revolves is Colorado Springs (whose springs are at Manitou, six miles away). It is chiefly concerned with the town under the great mountain rampart whose type and best-known feature is the always visible Pike's Peak. As the plains stretch away to the east and south, the redeeming flood of sunshine, as at Denver (still more blessed with light), pours over it from the earliest morning. The dust-storms, its one drawback, usually ignored by short-sighted advocates, are frankly acknowledged here; but their influence is minimized by a statement of the five colder months, which shows graphically the exact condition of every day.

The author has done more than to explain the sanitary advantages of Colorado Springs. He has gone into the economics of the question, and gives in detail the cost of travel and of living there, and has done it accurately. But there is a curious omission. Colorado College, an excellent institution, under management of the highest character, affords admirable educational advantages, but Dr. Gardiner is absolutely silent in regard to it. Is it possible that he does not approve of Colorado College at The Springs, or of the University of Denver, or of the State University at Boulder? These, particularly the first and last, the Agricultural College at Fort Collins, and the School of Mines at Golden, are high-grade institutions within the best climatic conditions. They, as well as the numerous churches, are important factors in making it possible, as Dr. Gardiner urges, for damaged families to establish themselves in the Centennial State. A well-founded fear of the concentration of so many consumptives has been that new cases may arise. That happens. In the last twenty years there have been in all, from locally contracted consumption, ten deaths at Colorado Springs, and the yearly proportion at Denver is from one-third to one-half of one in each thousand inhabitants. Had no consumption been brought to Colorado, it is probable that these fatalities would never have occurred. But statistics show that, whether predisposed or not, the chance of dying there from the non-imported disease is only one in ten to that run by citizens of the East who remain at home. Still, it is probable that the risk will increase as the sources of infection multiply.

Dr. Gardiner's book is the latest and best on its subject, and is entirely commended to those whose "lungs are a little weak," whose "bronchial tubes are affected," who "have a tendency to cough in the morning," or labor under similar indications of commencing tuberculosis euphemistically expressed. There is no undue encouragement for the dying, whose characteristic optimism leads them to accept any straw as a life-preserver; but there is plenty of legitimate hope for fairly incipient cases; and, apart from its distance from older centres, Colorado is a physical paradise, when one becomes accustomed to it. A proof-reader's oversight retains Practice for Practical six times on two pages (55-6), and Yager for Jaeger twice (p. 62).

Dr. Alfred Hillier's 'Tuberculosis' is primarily intended for the medical profession. The author hopes that legislators and agriculturists also may be concerned, and accordingly he has produced a composite volume, not very attractive in appearance or in style, nor of particular interest to Americans. Its special value is the truthful, but not novel, estimate it places upon an unlimited supply of pure air as the essential element of successful treatment, and in the illustrations for its application.

The most generally valuable recent essay upon this subject is Dr. Knopf's 'Tuberculosis, and How to Combat It,' for which was awarded, as against eighty competing papers, the prize of 4,000 marks offered by an international congress sitting in Berlin in 1899 for a popular composition upon 'Die Tuberkulose als Volkskrankheit und deren Bekämpfung.' Tuberculosis in some form, the most common being consumption, causes one death in every six or seven among the white races; it is clearly infectious; and it is distinctly curable in most cases during the early stages, and as certainly fatal when neglected—the exceptions to both extremes practically balancing each other. Every patient is a prolific seminary for its cultivation and distribution, so that the public welfare requires preventive measures to go hand in hand with those for cure. In general terms, it is not the disease but the tendency to it which is inherited. The efficient cause is the tubercle bacillus, and the remote causes are those which reduce the natural resistance of the body. Were every such bacillus annihilated, there would be no more consumption. Were every human being consumption-proof, the bacillus would be negligible. The aim of society should be to destroy the one and to maintain the other. Both objects are entirely feasible, and Dr. Knopf is perfectly justified in saying that all that is required to combat tuberculosis successfully is the combined action of a wise Government, well-trained physicians, and an intelligent people. Those factors would surely yield that result. Under existing conditions, the combination may seem utopian, but if the goal is never reached, it may at least be striven for and approximated. The practical suppression over wide limits of many serious diseases, as has actually been effected, encourages the attempt to attack tuberculosis systematically. One good working agency would be the dissemination of such a pamphlet as this, prepared as it is for popular instruction and not for personal aggrandizement.

Essays in Illustration of the Action of Astral Gravitation in Natural Phenomena. By William Leighton Jordan, F.R.G.S., etc. Longmans, Green & Co. 1900. 8vo, pp. 192, with two folding tables and a plate.

Mr. Jordan's book is charmingly printed on excellent paper, and is written in good taste. He admits that, "from a theoretical point of view, the argument is unassailable" that a body will not alter its velocity unless acted upon by an extraneous force; but he declares that the opinion which prevailed before Galileo is "equally reasonable as pure theory," and is in better accord with physical phenomena. He is mistaken, however, as to what the old opinion was. It really was that a body left to itself would instantly come to rest, so that what made a slung stone move on, after it left the hand, was the motion of the air; and what kept the air in motion was the motion of the stone. Now, as a matter of "pure theory," this was not all that could be desired. Mr. Jordan, on the other hand, thinks that a body left to itself would gradually lose velocity till it came to rest. Furthermore, "it is, I say, matter of fact, and not abstract argument, that must be appealed to for a decision." Being in that state of opinion, one might expect that he would make experiments to ascertain according to what law the velocity is diminished, and, that law having been made out, to determine how long it takes a body to come to a state of absolute rest. Since the solar system seems to be moving through space many times faster than the fastest locomotive, a body at absolute rest would fly off at a relatively tremendous rate; so that, if there be such a tendency "from a practical point of view," one would think there ought to be some way of utilizing it. But Mr. Jordan in one place confesses that he has not mathematics enough to solve a certain problem which, in fact, merely involves a simple application of the calculus; and he seems not to have a sufficiently mathematical mind to perceive that his theory calls for the formulation of a law and for the measurement of a constant. This does not, however, in the least prevent his discussing problems in dynamics of considerable difficulty.

If a common physicist is asked why he accepts the first law of motion, he will reply that the pendulum of an ordinary astronomical clock, detached from the escapement, will, in air, swing for several hours; that, under such a partial vacuum as an ordinary air-pump will furnish without much labor, it will swing many times longer; and that observation shows that the departure from the usual theory is too small to be detected in that way. No experiments have ever been made in high vacua; but the earth continues to rotate without any retardation or acceleration that any clocks hitherto made can discover, and thus the retardation or acceleration, if there be any, of the motion of an isolated body, must be so small that it is best assumed to be zero, until we meet with some facts which point to a different value. If, now, we turn to Mr. Jordan, and demand his explanation of the earth's rotation, he inquires of us whether we do not accept the proposition that every particle of matter exerts a gravitation upon every other inversely proportional to the square of the distance; and on our granting this, he adds, "Very well; it is the gravitation of the fixed stars—astral gravitation—which keeps the earth rotating." Were we rashly to produce a dynamical demonstration, which would be easy enough, that astral gravitation cannot produce any such effect, he would not pretend to understand it, but would inquire of us whether it did not assume the truth of the first law of motion, in which case it would beg the question; and we should be obliged to admit the entire justice of this. Mr. Jordan has us at an advantage by making no preten-

sion to being a mathematician; for it is plain that if the first law of motion were to be modified, that would involve the complete demolition of natural philosophy down to the ground, so that it would have to be rebuilt in some radically new way. Now if Mr. Jordan were a mathematician, we could ask him how he proposed to do that rebuilding. But, as it is, he would simply tell us that it was our business, not his, to find that out. Poincaré, the Lorraine mathematician, says that since the unknown exceeds the known, there are more unknown quantities in physics than equations to be satisfied; so that we can assign to any one of the former—as, for instance, the rate of variation of the velocity of a body that is left to itself—any value we choose. If this were intended to show that we must in natural philosophy use some different method of reasoning from mathematical deduction, it would do very well.

If Mr. Jordan had known what eminent thinkers are virtually with him in ascribing the earth's continued rotation to the influence of the fixed stars, he probably would have been better pleased than they would be by the alliance. The facts deserve to be set forth. Although the first law of motion was discovered by Galileo, yet the accurate conception of it seems to have been reserved for Newton. The law is, that if the motion of a body is quite independent of other bodies, the velocity remains unchanged in amount and direction. But this is mere verbiage unless the motion of a body can, or at least could, without violation of any general principle of nature, really be independent of other bodies. The law assumes, then, that motion belongs to a body though no other exists, and continues to have the same definite amount and direction; a notion that drove Newton to assert that Space is a real entity. But German metaphysicians refuse to admit that Space is a real entity, no matter what the facts of observation may be. Some of them maintain that there is a certain body, called the Alpha, wherever it may be, and that the motion of a body left to itself simply continues to be the same relatively to that Alpha. They forget that no abstract definition of a straight path is possible; so that, in order to define how the ordinary body moves, it would be necessary to make the Alpha pervade all space, when the difference between it and Newton's entitative space would be reduced to its name being "Alpha," instead of "Real Space." But Ernest Mach, who is distinguished among Germans as an extra clear head, substitutes for the Alpha the aggregate of all the masses in the universe; and since the mass of bodies near us is perfectly insignificant in comparison with the fixed stars, his view amounts substantially to saying that the first law of motion is, that a body left to itself continues to move in the same way relatively to the fixed stars.

Now, it is an easy corollary from the first law of motion, that if a swinging pendulum is free to change its plane of rotation, it will, nevertheless, continue to swing in the same plane; and if its point of support is displaced (with infinite gentleness), it will continue to swing in a parallel plane. Hence, when Foucault hung up a pendulum, and found that, left to swing freely, its plane of rotation turned relatively to terrestrial objects at a certain rate (which would at the pole give one return every twelve hours, or a complete revolution in twenty-four hours), the Newtonians exclaimed that this proved the absolute motion of rotation of the earth. But no, says Mach, absolute rotation is simple nonsense (that is to say, his metaphysical system has no room for it), and what you call absolute motion, in your first law of motion, is really motion relatively to the fixed stars, so that the Foucault phenomenon is due to the relation of the earth to the fixed stars. Now that, we maintain, is the same thing as to say, with Mr. Jordan, that it is the fixed stars that keep the earth in rotation. If it be true that the relation of a body to the most distant objects is so much more important than its relations to near ones, one might be inclined to question whether, on the whole, spatial relations were as significant as we have been accustomed to think them. It ought, at any rate, to encourage the telepathists.

We will not recommend anybody to purchase this book; but if any young student of dynamics has a copy, he can find an excuse for giving it house-room in the pretty problems, all well known but conveniently collected in the fifth essay, where the author professes to explain them by astral gravitation.

JUST PUBLISHED.

Mitchell's School and College Speaker.

By Prof. WILMOT B. MITCHELL of Bowdoin College. ci+358 pp. 12mo. $1.00 *net.*

This book seeks to give instruction in the essentials of elocution, and to furnish declamations which exercise the various elements of expression and at the same time appeal to students—those which present a vivid picture, tell an interesting tale, deal with a concrete situation, or advocate principles and policies fervently and eloquently. Many of these selections are new; they deal with live subjects. Nearly all of them have been tested in prize-speaking contests and classroom work.

THE

MAY-FLOWER

AND

Her Log

July 15, 1620—May 6, 1621

Chiefly from Original Sources.

—BY—

AZEL AMES, M.D.,

Member of the Pilgrim Society

With Maps and Charts, showing the course of the Pilgrims, a Portrait of Governor Edward Winslow, and other Illustrations.

Dr. Ames gives in this book a history of the *Speedwell*, and describes the model and rig of the *May-Flower*, her charter, officers, crew, passenger lists, quarters, provisions, lading, etc. From all accessible data he has constructed a Log of the *May-Flower's* Pilgrim voyage, and in an Appendix he reprints important Pilgrim documents.

Besides being of unique interest for all descendants of the Pilgrims, the volume appeals especially to book-lovers, being printed in seventeenth century style from old-face type, with ornamental initials, chapter headings, tail-pieces, and marginal rules, giving it unusual distinction.

8vo, $6.00 *net*.

For sale everywhere. Send for circular to

HOUGHTON, MIFFLIN & Co.

Boston and New York

"How to Know the Seashore."

THE SEA BEACH AT EBB TIDE

By Augusta Foote Arnold.

With 600 Illustrations.

BEFORE going to the beach this summer, buy a copy of this book,—it opens a new world of intelligent observation. It contains descriptions of sea-weeds of the Atlantic and Pacific beaches, and of the curious animal forms which inhabit the rocks, sands and shallow waters. Careful directions are given for collecting—how to make a herbarium, etc. *Send for circular.*

Price $2.40, net (add 20 cents for postage if ordered by mail).

The Century Co., Union Square, New York.

Houghton Mifflin & Company's New Books

Substitutes for the Saloon

The third book on the Liquor Problem. By RAYMOND CALKINS. 12mo, $1.30, *net;* postpaid, $1.45.

The previous books treated the Legislative and Economic Aspects of the liquor problem. This points out the causes of the hold of saloons on the community, and considers their number and attractions. It also discusses the progress made by substitutes,—lunch-rooms, coffee houses, clubs, settlements, gymnasiums, etc. It is thoroughly interesting and valuable, being based on facts gathered by special investigators in fifteen large American cities.

Content in a Garden

By CANDACE WHEELER. With decorated borders by DORA WHEELER KEITH. 12mo, $1.25, *net;* postpaid, $1.37.

A tasteful summer book, which mingles gardening and literature in a delightful fashion. Mrs. Keith has drawn some charming designs for borders which are printed in color.

The Second Book of Birds: Bird Families

By OLIVE THORNE MILLER. With 24 full-page illustrations, 8 of which are in Colors, drawn by LOUIS AGASSIZ FUERTES. Sq. 12mo, $1.00, *net;* postpaid, $1.12.

Mrs. Miller brings before her readers numerous families of birds,—thrushes, kinglets, warblers, vireos, swallows, finches, grosbeaks, orioles, and many others. She describes their appearance, habits and songs. The illustrations are remarkably good, almost giving the impression of live birds. The eleven printings of the colored plates have delayed the book, which will be published

Appletons' New Nature Books and Novels.

GOOD SUMMER FICTION.

A ROMANCE OF EARLY EXPANSION.

The Wilderness Road.

A Romance of St. Clair's Defeat and Wayne's Victory. By J. A. ALTSHELER, author of "In Circling Camps," "A Herald of the West," etc. 12mo. Cloth, $1.50.

"He takes his situations, always lively, dramatic and full of possibilities, and handles them with an ease and adroitness the skill of which is more and more apparent as, in their turnings and twistings, they constantly flash upon the fascinated reader some new phase, yet ever leave him in the dark as to the next move or the final outcome."
—*Chicago Tribune.*

MR. BENSON'S NEW SUCCESS.

The Luck of the Vails.

A Romance. By E. F. BENSON, author of "Dodo," "The Rubicon," "Mammon & Co." 12mo. Cloth, $1.50.

"The tale is very well told."
—*New York Tribune.*

"Attention is held firmly from the first spell of interest to the final climax."
—*Newark Advertiser.*

"Really an interesting story, and whoever begins it will want to read it through."
—*Waterbury American.*

A ROMANCE OF THE REGENCY.

The Curious Courtship of Kate Poins.

By LOUIS EVAN SHIPMAN. 12mo. Illustrated. Cloth, $1.50.

"One of the best written novels of the year. It will be widely read and generally admired. The romance has vigor, tone and cumulative interest that increases as the story ascends to its climax."—*Philadelphia Item.*

"The rakish days of Beau Brummel afforded delightful material for a brilliant and diverting romance, and the author of 'D'Arcy of the Guards' has made fullest use of it. The story lacks little in either boldness or brilliancy."—*Cleveland World.*

NATURE BOOKS IN COLORS.

D. Appleton and Company invite special attention to the following series of Nature Books which present (1) authoritative text; (2) carefully executed illustrations in colors, and others in black and white; (3) convenient size; and (4) a moderate price.

Bird Life.

A Study of Our Common Birds. By FRANK M. CHAPMAN, Assistant Curator of Mammalogy and Ornithology in the American Museum of Natural History. Illustrated by ERNEST SETON-THOMPSON. (With 75 full-page lithographic plates of birds in natural colors, reproducing Ernest Seton-Thompson's drawings.) New edition. 12mo. Cloth, $2.00 net. Postage 18 cents additional.

"A careful perusal of the work should make every bird in the Middle Atlantic States familiar to the reader."
—New York Press.

"The book is easily first among all works upon birds."
—San Francisco Bulletin.

Insect Life.

By JOHN HENRY COMSTOCK, Professor of Entomology in Cornell University. New edition. With 12 full-page plates reproducing butterflies and various insects in their natural colors, and with many wood engravings by Anna Botsford Comstock, Member of the Society of American Wood Engravers. 12mo. Cloth, $1.75 net. Postage 20 cents additional.

"Full of suggestive ideas which will keep the interest of the reader up to concert pitch."
—*Brooklyn Eagle.*

"'Insect Life' is as truly charming and valuable a book as has ever been published on the subject of nature study."
—*Albany Times Union.*

Familiar Trees and Their Leaves.

By F. SCHUYLER MATHEWS. New edition. With twelve pictures of representative trees in colors, and over 200 drawings by the author. With the botanical name and habitat of each tree. 12mo. Cloth, $1.75 net. Postage 18 cents additional.

Familiar Flowers of Field and Garden

By F. SCHUYLER MATHEWS. New Edition. With 12 orthochromatic photographs of characteristic flowers by W. L. Brownell, and over two hundred drawings by the author. 12mo. Cloth, $1.40 net. Postage 18 cents additional.

The United States Navy, 1775-1901.—Three Volumes.

A History of the United States Navy

By EDGAR S. MACLAY, A.M. New edition, in three volumes, the new volume containing an Account of the Navy since the Civil War, with an authoritative history of the Spanish-American War, based upon official sources of information. Illustrated. 8vo. Cloth, $3.00 per volume. Postage 26 cents per volume additional.

"It is now more valuable than ever and quite essential to the library of every reader and student interested in our fighting forces afloat. It has the fascinating story of the development of the American Navy since the close of the Civil War."—*New York World.*

"Maclay's 'History of the Navy,' which is the history adopted at Annapolis, and the standard work everywhere, here appears in a more comprehensive and satisfactory form than ever before."—*Washington Post.*

NORWICH ART SCHOOL.—A School of Arts and Crafts, offering the best opportunity to study Drawing and Painting, with advanced courses in Design, Wood-carving, Draughting, Printing, Binding, etc. Locality remarkable for its beauty. General education may be carried forward in classes of Free Academy. Two scholarships defraying tuition awarded on competition. Graduate scholarships in Art Students' League, New York, and School of Boston Museum.
For full particulars, address
OZIAS DODGE, Director.

DELAWARE, Wilmington, Franklin Street.

THE MISSES HEBB'S
Boarding and Day School for Girls. Students are prepared for college.

MARYLAND, Baltimore, 122 and 124 W. Franklin St.

EDGEWORTH BOARDING and DAY School for Girls—39th year will begin September 26, 1901. Mrs. H. P. LEFEBVRE, Miss E. D. HUNTLEY, } Principals.

MASSACHUSETTS, Boston.

BOSTON UNIVERSITY Law School.
Address the Dean,
SAMUEL C. BENNETT.

MICHIGAN, Detroit, 73 Stimson Place.

DETROIT HOME and DAY SCHOOL, 24th year. Prepares for all colleges open to women. 20 received in the school family.
The Misses LIGGETT, Principals.

PENNSYLVANIA, Philadelphia, Chestnut Hill.

MRS. LUCIA POLK CHAPMAN and MISS JONES, SUCCESSORS TO MRS. COMEGYS AND MISS BELL. BOARDING AND DAY SCHOOL FOR GIRLS. For circulars address Miss C. S. JONES.

PENNSYLVANIA, Philadelphia. Germantown, 59 High St.

IVY HOUSE,
Preparatory to Bryn Mawr and other colleges.
Address Miss MARY E. STEVENS.

MISS ANABLE'S Boarding and Day School for Girls. Established in 1848. Circular on application. Opened Sept. 27. 1350 Pine St., Phila., Pa.

MISS REYNOLDS' School, 66 W. 45th St., New York.—Special students admitted to regular classes. A few young girls received into the family.

MARTHA'S VINEYARD SUMMER INSTITUTE, Cottage City, Mass.
500 Students. 40 Instructors.
64-page Circular sent free on application to WM. A. MOWRY, Hyde Park, Mass.

The Gilman School

For Girls

Also called *The* Cambridge School

Pleasant home life, trained teachers, small classes, varied courses, complete laboratories, healthful surroundings, ample playgrounds, highest ideals. The Manual describes the school. Introduction required.
Arthur Gilman, A. M., Director, Cambridge, Mass.

MASSACHUSETTS, Concord.

MIDDLESEX SCHOOL.

A new boarding school for boys. Opens October 3d, 1901. Seven classes. Boys received into the four lower classes only.

TRUSTEES:
Charles J. Paine, President,
Henry L. Higginson, Robert Winsor,
LeBaron R. Briggs, W. Cameron Forbes.
Address
FREDERICK WINSOR, Head Master, CONCORD, MASS.

Miss Baldwin's School for Girls
Preparatory to Bryn Mawr College

MISS FLORENCE BALDWIN, Principal. Within ten years more than one hundred and twenty pupils have entered Bryn Mawr College from this school. Diplomas given in both General and College Preparatory Courses. Fine fire-proof stone building. 25 acres beautiful grounds. For circular, address the Secretary, Bryn Mawr.

New York University
SUMMER COURSES.
SEVENTH YEAR, JULY 8-AUGUST 16.
Forty Courses in Fourteen Departments.

University Heights combines the advantages of city and country. For "Announcement" address MARSHALL S. BROWN, University Heights, New York City

The Jones Summer School
Of Mathematics and the Languages,
SEVENTEENTH SESSION, JULY 5—SEPT. 20.

Rapid reviews for candidates for admission to CORNELL UNIVERSITY and for conditioned students.
Address GEO. W. JONES, Ithaca, N. Y.

THE WABAN SCHOOL | Waban, Mass.
WABAN HALL for Boys. WINDSOR HALL for Girls.
J. H. PILLSBURY and ANNA M. GOODNOW, Principals.

A Comparison of TWO GREAT NOVELS of the Civil War

THE CRISIS and THE GRAPES OF WRATH

By WINSTON CHURCHILL

It is curious that two novels on the same general theme, by different authors, without collaboration, and appearing simultaneously, should complement each other as do these books. By reading both a more complete knowledge of the war can be obtained than from many volumes of military history.

"The Grapes of Wrath" differs in almost every respect from the conventional Civil War novel. Miss Norris plunges her readers at once into the midst of the war. Her story opens in a New Jersey village in 1864, and the reader follows the fortunes and adventures which give a more diversified picture of life in the Eastern States, North and South, than any other story of the great conflict.

By contrast, historically, with "The Crisis," we find in "The Grapes of Wrath" full and vivid descriptions of the last year of the war in Virginia, from the opening of the Battle of the Wilderness to the Surrender, instead of scenes early in the war. In Mr. Churchill's book occur many extended scenes in which Lincoln or Grant are central figures; in "The Grapes of Wrath" is a fine scene, graphically described, in which the heroine is present at a council of war of General Lee and his staff. In another dramatic scene General Lee tries to show President Davis the absolute necessity of evacuating Richmond before it becomes too late.

By MARY HARRIOTT NORRIS

"The Grapes of Wrath" has an air of reality that convinces the reader that most of it is taken from actual occurrences. Mr. Churchill describes fully the life of St. Louis just before the war and during its first years. Miss Norris describes with equal vividness those pathetic thrilling days in Richmond before the surrender, the night of pillage at the hands of the mob, the entry of the Union forces, and the last desperate battles of the dying Confederacy. There is a superb description, unforgettable in the impression it leaves, of the Wilderness through which our armies fought, inch by inch, against the intrenched South.

Perhaps the most remarkable portion of "The Grapes of Wrath" is the long account of the Union Captain Haldane's captivity in the abandoned mine in the Wilderness, where a quantity of negroes who had run away from their masters had gathered, and lived collecting plunder and wealth of all sorts in preparation for freedom. We see the faithful negro, but we also encounter the predatory negro, sacking houses, robbing the dead, plundering everywhere, and holding wild orgies. Obviously the author did not write it to please anybody, but to give a truthful picture of both sides in all their phases during the most important year of the Civil War.

The GRAPES OF WRATH is published by SMALL, MAYNARD & COMPANY, BOSTON

The Macmillan Company's NEW BOOKS

THE NOVELS ARE

The Crisis

By Winston Churchill,
Author of Richard Carvel.
3rd Edition, 160th Thousand
The best of the summer novels, the most popular. The great American novel of our times.

The Heritage of Unrest

By Gwendolyn Overton
A novel of Indian warfare, free winds of the plains, problems of Western Empire.

Henry Bourland

By Albert Elmer Hancock
A novel of interpretation. A story of a Cavalier: A tale of Southern reconstruction.

Arrows of the Almighty

By Owen Johnson
A most interesting story of the Civil War, and what one strong man in the right place accomplished.

Robert Annys: Poor Priest

By Annie Nathan Meyer
A story of the great uprising in England, and a picture of social conditions in the fourteenth century.

Richard Yea and Nay

By Maurice Hewlett
Many critics believe this to be the greatest of modern novels. The one book of perfect style issued in the last few years.

The Making of Christopher Ferringham

By Marie Beulah Dix
A vigorous and stirring narrative of adventure by land and sea.

Each of the above, 12mo, cloth, $1.50.

OTHER WORKS ARE

Teachers' Professional Library

EDITED BY NICHOLAS MURRAY BUTLER.

The New Basis of Geography

A manual for the preparation of the teacher.
By Jacques Redway
12mo, cloth, net, $1.00.

School Hygiene

By Edward R. Shaw
12mo, cloth, net, $1.00

The Teaching of English

By Percival Chubb
12mo, cloth, net, $1.00

Chemical Lecture Experiments

By Francis Gano Benedict, Ph.D.
Instructor in Chemistry in Wesleyan University.
12mo, cloth, net, $2.00

The Limits of Evolution

AND OTHER ESSAYS
Illustrating the Metaphysical Theory of Personal Idealism.
By G. H. Howison, LL.D.
Mills Professor of Philosophy in the University of California.
12mo, cloth, net, $1.60.

Flowers and Ferns in Their Haunts

By Mabel Osgood Wright
Author of "Bird-Craft," "Citizen Bird," "The Friendship of Nature," etc., etc.
With illustrations from Photographs by the Author and J. Horace McFarland.
12mo, cloth, net, $2.50.

THE MACMILLAN COMPANY

66 Fifth Avenue, New York

The Nation.

NEW YORK, THURSDAY, JUNE 20, 1901.

The Week.

Having received news that the Cuban Convention had adopted the Platt amendment without alteration or comment of any kind, Secretary Root said: "It means the independence of Cuba; and all that is best and freest in Cuba will be backed by all that is best in the United States." The independence of Cuba was the thing upon which we relied for our justification when we went to war with Spain. We made solemn proclamation that, having secured that independence, we would depart and leave Cuba free to frame a government for herself in her own way. It remains to be seen whether we are still to keep our word. Mr. Root says that we are. We hope that he speaks truly. We hope that he may remain in office long enough to call the American soldiers home. We do not fail to note, however, that there is a syndicate of capitalists at work in Cuba whose interests are opposed to any relaxation of our hold upon the island. We note also that the Platt amendment calls for "a permanent treaty" between the United States and Cuba, to embody the provisions of said amendment. The negotiation of a treaty may take considerable time, but we have learned to rely upon the good judgment, as well as the good faith, of Secretary Hay, and we think that what is left of Cuban independence and American honor may be considered safe in his hands.

Reports from Washington are conflicting as to our next step in reference to Cuba. The most trustworthy dispatches portend long delays before our troops can be withdrawn, and the *Tribune* editorially furnishes a long schedule of preliminaries yet to be gone through. What is a treaty, in contemplation of the Platt amendment? Is it an instrument negotiated and signed on our part by the Executive, or must it be ratified by the Senate of the United States before it becomes effective? If the former interpretation is correct, it is only necessary for Secretary Hay and the Cuban official charged with such duties to paste a copy of the Platt amendment on a piece of paper and write a declaration that it constitutes a perpetual agreement between the two countries. But if the Senate of the United States must ratify it by a two-thirds vote before it becomes a treaty binding on Cuba, then nobody can predict when it will become effective. There is no knowing whether a two-thirds vote of the Senate can be obtained at all. If there is any party advantage to be gained on either side, experience teaches that neither the naked merits of the treaty nor the claims of justice in general will be the chief consideration. On the other hand, the withdrawal of troops is an executive act. It is to be decided by the President and his Cabinet how much or how little force is required to preserve order in Cuba now or at any time. Therefore, the ratification of the treaty is not a *sine-qua-non* of evacuation. It is a question of good faith and good conscience on the part of the Executive.

Less than a month ago, at the formal opening of the Pan-American Exposition, Senator Lodge smote Germany and the rest of the world with the terrible sword of his mouth. He and Roosevelt declared that Pan-Americanism meant pan-belligerency. The peaceful occasion was fitting, to their fine sense of propriety, for indulging themselves once more in that ecstatic glorification of war, that lyric exaltation of the exercise of force, which are the mark of a certain stage of culture. What a low and barbaric stage it is, Secretary Hay showed in his speech at Buffalo on Thursday night. The idea, he said, of an immense military power to "overawe the older civilizations" was an obsolete conception, belonging to "an order of things that has gone, I hope, for ever." "God forbid!" he exclaimed, as if with his eye right on Lodge, "that the slightest hint of menace" should be associated with that great assemblage of the products and triumphs of peace. Whether by direct intent or not, the speech of Mr. Hay contains the severest rebuke and repudiation of Lodge's reckless utterances. The latter have, in fact, been received with marked coldness or open ridicule by the press of the country. The Senator mistook the time of day. He and Roosevelt imagine, because they themselves think, breathe, and sleep still preoccupied with the Spanish war, sup on the Monroe Doctrine, and breakfast on America for the Americans, that the rest of mankind are as mad as they. But their war-whoops met with no response from the people, and it only needed the appearance of a civilized man like Mr. Hay to show how out of place the brandishing of tomahawks is at an exhibition of the arts and industries of modern man.

Some interesting and significant changes in the diplomatic service are announced. The Minister to Venezuela has been transferred to Portugal; the Minister to Persia, to Venezuela; the First Secretary of the Legation at Constantinople has been made Minister to Persia; the Second Secretary at Paris, First Secretary at Constantinople; and the Third Secretary at Paris, Second Secretary. Apparently, Secretary Hay is working out a more definite system of transfers and promotions than has hitherto existed in our diplomatic service. Such a reform has been urged for years. The obvious defect of our plan, based on the spoils system, has been a failure to train our diplomats, and to offer a prospect of advance to men who have served well in minor positions. If the admirable policy which Secretary Hay is now following is steadily adhered to by the present and by succeeding Administrations, our consular and diplomatic service will soon be vastly improved.

That Mr. Platt should decide to retire from the United States Senate at the end of his present term is not to be wondered at. He will be then within a few weeks of his seventy-first year, and his health lacks that robustness which makes more than one older man among his colleagues seem for all practical purposes to be hardly past middle life. Moreover, the position is not especially congenial, and it has always been well known that one reason why Mr. Platt sought the office was as a "vindication," which he had desired ever since he resigned, with Conkling, in 1881, and failed of the reëlection which he expected. Beyond looking after the patronage, he has cut no figure at Washington the past four years. Under such circumstances there could be no particular satisfaction in a second term, and while Mr. Platt might like to command a reëlection from a Republican Legislature, he doubtless appreciates the fact that he could not expect to serve another six years in a way which even he himself would feel creditable. Among the names promptly suggested for the succession, that of Gov. Odell naturally leads the list. It would be surprising, however, if that official should lend any favor to the idea. He has made so successful a beginning of his two years as Governor during the first six months, that his party cannot think of anything except nominating him for a second term in the fall of 1902 if he keeps on as he has started, and his reëlection would follow unless there should come within the next sixteen months a serious political reaction, of which there are as yet no signs. Mr. Odell's tastes are plainly for executive rather than legislative work, and he withdrew from the lower branch of Congress because he did not find the duties of a Representative at Washington congenial. Certainly the people of the State would not relish the idea of losing from the State capital a man who has shown such remarkable capacity for the work of Governor. Happily there are plenty of good men who are eligible by reason of

being Republicans "in good and regular standing."

The signing by Mayor Ashbridge of Philadelphia, late on Thursday night, of more than a dozen ordinances which had been rushed through the Councils, granting street-railway rights in that city for nothing, fixes national attention upon the most audacious and shameless seizure of public rights for the benefit of corporations which has ever been seen in this country. The story of this transaction seems almost incredible. Three weeks ago, bills were introduced in the Pennsylvania Legislature which proposed to change the existing law about the granting of franchises for street railways, and they were rushed through the body with indecent speed. As soon as they had passed, Senator Quay appeared at Harrisburg, and his Governor signed them at midnight. The next morning, parties to the plot secured charters from the Secretary of State before his office was open to the general public, and before outsiders had any chance to put in applications. "We knew through our friends," explains Congressman Foerderer, one of the gang, "that the thing was to be done. It opened the way for those who were ready to take advantage of it, and we were among those ready to do so." Senator Quay's son is interested in Pittsburgh corporations. Senator Penrose represents the interests which wanted to seize valuable rights in Philadelphia. The City Councils were as easily controlled as the State Legislature had been. Fourteen bills granting franchises, some of great value, were passed without being printed. While the bills were in the Mayor's hands, Mr. John Wanamaker sent him a letter offering to pay $2,500,000 for the rights granted by the fourteen ordinances. A copy of this letter was handed the Mayor at the conclusion of the ceremonies at the new mint on Thursday afternoon, but as soon as he recognized the handwriting on the envelope, he threw it away, without breaking the seal, and affixed his signature to the bills that night without giving any opportunity for a public hearing.

The Connecticut Legislature has thrown a tub to the whale of Constitutional reform, the Senate having concurred with the House in the proposition to submit a call for a Constitutional Convention. In the tub, however, the advocates of a popular system of legislative representation find much to comfort them. The submission to the voters of the question of calling a Constitutional Convention is an unexpected concession by the representatives of the little towns, who only the week before had rejected a most conservative measure of reform, and who have obstinately maintained for years that there was no need of any change. The importance of this reversal of position is not lessened by the fact that it was avowedly taken to head off a broader and juster measure of reform. The all-important point is, that the people, after a generation of protest and appeal, are to be permitted to say whether they think reform is desirable. It is hardly to be supposed that they will reject the opportunity. It must be admitted that they cannot expect much from a convention constituted, as this one will be, of one delegate from each town, thus stamping with approval the inequitable system of legislative representation which the reformers desire to correct. But any step forward in the cause of a contested reform makes easier the next. The first step, always the most difficult, has at last been taken in Connecticut, and Constitutional reform of some sort now seems assured in that State. Like most reforms, it may come in homœopathic doses. For the first dose most credit is due to Gov. McLean. When the mild amendment was rejected a fortnight ago by an overwhelming vote in the lower branch of the Legislature, hope of any favorable action at this session was abandoned. Then came the short, sharp message from the Governor, and the situation was reversed in a day.

The manifesto of the Metal Trades Association, explaining its attitude toward the striking machinists, is a document of unusual interest. The Association, less than a year ago, made a formal contract with the Machinists' Union, by the terms of which strikes were not to be ordered until arbitration had been tried and failed. A few weeks ago, certain demands were made by the representatives of the Union, accompanied with an order to strike unless these demands were conceded by a certain date. The Metal Trades Association appealed to the contract, and urged the Union official who ordered the strike to submit the dispute to arbitration. No attention was paid to these remonstrances, and the strike has taken place. The Metal Trades Association appears to be entirely justified in declaring that the Machinists' Union has broken faith, and has proved itself a body with which it is useless to make agreements. The employers recognize the right of workmen to combine, to decline to work, and to sell their labor for the best price they can get. But they emphatically assert, what is indeed implied in this right, that they will employ men who do not belong to trade-unions, and that they will discharge unsatisfactory employees. They condemn both strikes and lockouts as unbusinesslike and unnecessary, and assert their belief that all disagreements can be settled by other means. And they point out that the rational way to shorten working-hours and raise wages is to advance rather than obstruct production by improved methods.

One of the most interesting of all recent developments in the industrial-combination movement is the Pennsylvania Railroad's purchase of the Pennsylvania Steel Company, as a protection against possible monopoly on the part of the steel-rail manufacturers. This is, we believe, the first important instance of a consumer throwing down the glove to combined producers. It is all the more striking an occurrence from the fact that the policy of the United States Steel combination, so far as yet unfolded, has not indicated artificial prices. The steel-manufacturing interests are to-day combined with a closeness to which last year's situation gave little parallel, but prices have not been raised. A few products, such as nails, wire, and iron plates, sell for somewhat more to-day than they did a year ago; but pig-iron is lower than it was either last month or last year, and steel rails themselves are quoted at $28 per ton, against $35 last June. Nevertheless, the Pennsylvania Railroad, which buys, on occasion, something like 100,000 tons per year, is plainly not willing to trust its fortunes to the good will or forbearance of the combination. It has therefore bought its own rail-manufacturing plant, and will presently be in a position to dictate terms.

There must be some screw loose in the wool and woollen industry. The present tariff on wool was adopted at the instance, or rather at the furious demand, of the wool-growers. There was a sudden rise in the prices of wool in consequence, and then a reaction and a decline, and the decline has been persistent and continuous, although prices of commodities in general have had an upward tendency during the past year. According to the annual review of the wool trade, published by the New York Chamber of Commerce, "prices have declined almost to those ruling in 1898." The Chamber of Commerce report says that "extravagant duties on foreign wool do not seem in the long run to benefit our wool-growers. If they were modified or abolished, fluctuations of prices would be less frequent and speculation less rampant. Consumption of the staple would increase, as the use of adulterants would be discouraged." The use of adulterants, shoddy and cotton, in the production of woollen goods is believed to exceed the entire wool clip of the United States. Mr. Dexter North tells the wool-growers that they have only themselves to blame. They were told when the Dingley bill was under consideration, that too high a duty would restrict the consumption of wool and would thus be injurious to the grower. "It has operated in precisely that way," adds Mr. North. Although Mr. Harding does not know a manufacturer anywhere who wants free wool, he probably knows a great many who would like to have the present duties cut in half.

All the army news of the day has a very disagreeable way of running to the discovery of fresh frauds somewhere or other. On Thursday, word came from San Francisco of the Government having been robbed of hundreds of thousands of dollars, "through the treachery and dishonesty," a detective alleges, "of some of Uncle Sam's army officers." This is disheartening enough, coming as it does on top of the daily dispatches from Manila telling of new officers accused or convicted. There is, of course, nothing novel about peculation in connection with army supplies. Stanton spent a good deal of his time during the civil war in thwarting or exposing army thieves. We think it cannot be denied, however, that, in proportion to the number of men now in the army, the scandals have been more numerous in the past two years. What is the explanation? Is it that a war in which the commercial note was sounded so loudly had a more than usually demoralizing effect upon the men engaged in it? Seeing their countrymen confessedly "on the make" in the war, was the temptation peculiarly strong for them to get something out of it for themselves? We do not know, but the men who have advocated war as a means of toning up our moral fibre must know, and they ought to tell us. But they never were very voluble about army frauds.

The resolutions adopted at the recent Coöperative Congress in England show how far the movement has strayed from its original lines. When the Congress was asked to declare that there was an urgent necessity that Parliament should provide an old-age pension for every citizen, male and female, hardly a voice was raised in opposition. One member pointed out that, in view of the fact that the coöperators, with their wives and families, numbered between nine and ten millions, it was not necessary to despair concerning their own ability to provide for the aged. He remarked, also, that the money for pensions could not be drawn from some mysterious "bottomless pit," but would be taken from the pockets of those who were present. Mr. Holyoake, almost the last survivor of the pioneers of coöperation, appealed to the Congress not to violate its traditions. Never before, he said, had they applied to the state to help them in any public measure or in any action of their own. Their proud boast had been that they kept the state, and not that the state should keep them. The objects of their societies were to put into the hands of the working classes the power of taking care of themselves, and not to go as suppliants to the state. This appeal was received with very slight applause, and in reply it was stated that the Government was likely to pension the idle, the selfish, and the debauched, and that the thrifty coöperators must insist on similar favors. This argument was apparently accepted as conclusive, for the resolution was adopted without a dissenting vote.

The true reason for the adoption of such a resolution was presently shown to be the socialistic spirit of the Congress, for it promptly proceeded to demand immediate legislation to destroy the "undue and unearned advantage of land-owners," and "to bring the land under the control of the nation for use in the best interests of the people." This resolution was agreed to without opposition, and another followed which declared that the business of transportation ought to be carried on by a Government department, and not left to individual enterprise; and that the Government should own or control the railway systems of the country. The venerable Mr. Holyoake attempted another protest, but this time he was suppressed, and the resolution was then carried unanimously. One more resolution demanding that the Government should lend the deposits in the savings banks to workmen to enable them to build houses, was also adopted without opposition. Whatever we may think of the wisdom of these resolutions, there can be no question that they would have been listened to with amazement and disgust by the men who inaugurated the coöperative movement in England, a half-century ago.

The tax of ten per cent. on the profits of the gold mines of the Transvaal, proposed by Sir David Barbour, the expert employed by the British Government to investigate the sources of revenue now available in that impoverished country, is in many respects the most equitable tax that could be devised. These gold mines were the real cause of the war, for those who owned them could have prevented the Jameson raid if they had chosen to do so. Sir David Barbour suggests that after paying this tax they will be better off than before, because, while the tax may amount to £450,000 a year, the saving from the abolition of the dynamite monopoly will be £600,000. If this estimate is correct, the tax on the profits of the mines should be more than ten per cent., if a larger revenue is needed. On economic grounds, the profits derived from mines, at least where they are exceptionally rich, are properly taxable at high rates, because the value of the mines is out of proportion to the labor and capital employed in their development. In the Transvaal such a tax as is proposed would fall where it could easily be borne, and give the ruined farmers a chance to retrieve their fortunes.

The German Chancellor made the unveiling of Bismarck's statue in Berlin on Sunday the occasion, not merely of a eulogy of the great statesman, but also of a sort of apologia for Germany's course since Prince Bismarck was dismissed by the Emperor. Here the crucial point of difference is the modern expansion of Germany over sea. It is, of course, possible to quote Bismarck on both sides of the question of a colonial policy. The beginnings of German colonization in South Africa were, in fact, his own. Yet it was he also who secretly egged the French on in Tunis and Cochin China, for the express purpose, as he said to his intimates with a chuckle, of inducing them to dissipate their wealth and military strength. Bismarck's saying about Oriental possessions not being worth the bones of one good Pomeranian musketeer has been brought to many minds by the German venture in China. Indeed, one of the last recorded *mots* of the ex-Chancellor, shortly before his death, was his remark, on being shown the map of the Kiao-Chau region, seized by Germany, "Big enough to make many blunders in."

Count von Bülow seemed to be aware of the implied conflict between Bismarck's policy and that of the German Empire to-day. He said that it would be folly to suppose that Prince Bismarck never made a mistake, or that the maxims he laid down must be applied in all circumstances. Undoubtedly; but this does not cover the real differences between the great work of unifying and consolidating national territory and national sentiment, which Bismarck wrought, and the latter-day use of the force thus acquired for the violent extension of German influence and German trade all over the world. This may be the true policy, though time has yet to pass upon it. But what it is already producing is, as Mr. John Morley has sarcastically said, a crop of "imitation Bismarcks." He meant statesmen who rush into commercial expeditions which they call war, and into which they go without due preparation or real foresight. Such a policy is not the heroic one of "blood and iron," but simply of blood without the iron. Whatever else may be said of it, there can be no doubt that it tends to cheapen and degrade war by commercializing it. There should be no interference on behalf of the Armenians, because it would be bad for trade. But to see, or to flatter ourselves that we see, "millions in it" in South Africa or the Philippines, and to waste life and sully the nation's good name in needless wars for profit (though the profit is all loss thus far)—that is the policy, not of an iron Chancellor, but of an imitation Bismarck. Von Bülow's speech was commendably frank and independent; it has won the applause of the German press generally, and apparently offended the Emperor.

DEMOCRATIC PROSPECTS.

President McKinley's statement that he is not a candidate for a third term, and would not accept a renomination if it were tendered him, has turned attention afresh to the possible candidates for the succession. There is no lack of such on the Republican side. In making a catalogue we might safely take, as a beginning, a list of Senators of the United States belonging to that party, including their presiding officer. Fifty-three of these will be disappointed, and it would be a safe wager that the fifty-fourth will not get the prize. Governors of States have had better luck than Senators during the present generation. There are some such now who are well within the range of choice, but, as it is not our custom to make nominations so long beforehand, we shall not do violence to their modesty by mentioning them. There are no Generals or Admirals who stand out with sufficient distinctness to make one of them a probable choice three years hence. As for Judges, the unwritten law which runs against the union of things political and judicial is still in force, and ought to continue so.

The wealth of the Republican party in Presidential timber is not more remarkable than the poverty of the Democrats. All of their Senators and their Governors of States except three (Colorado, Montana, and Washington) are Southern men. All of these who have sufficient force of character to be considered for the Presidential office were either in the Confederate army or in the Confederate service in some other capacity. This ought not now to be a disqualification, but it is still considered such by a large body of voters in the North, so that it would be unsafe to put one of them in nomination, even though he has since fought, like Gen. Wheeler, under the Stars and Stripes. Moreover, the veterans on either side in the civil war are now well advanced in years.

Besides Senators and Governors, there are some men of position and reputation in the Democratic party, but they are mostly outside the range of choice by reason of their failure to support Mr. Bryan in one or both of the campaigns when he was the party's regular nominee. Among these may be mentioned John G. Carlisle, Charles S. Fairchild, William C. Whitney, J. Sterling Morton, William F. Vilas, and ex-Senators Caffery and Lindsay. There remain, of those who seem to be still in the public eye, Richard F. Olney, David B. Hill, Arthur P. Gorman, and Mr. Bryan himself. Mr. Olney will be in his seventieth year before the election of 1904 takes place, and that fact alone will probably take him out of range of choice. Of Hill and Gorman it is sufficient to say that, however attractive they may be to old-fashioned Democrats, they can get no Independent support, without which success at the polls will be almost impossible.

Thus, although we do not believe that Mr. Bryan will be nominated again, the poverty of the Democratic party in available candidates is such that we are forced to consider him as a possible candidate. Will his chances before the people be any better in a third race than in the first and second? We think not. On the contrary, they will be worse, for the reason that the issue on which he made his first campaign, and which he insisted on dragging into his second one, has ceased to be attractive to his own followers. However much they may be attached to him personally, they no longer associate him with a principle of government. The silver question is dead, to all intents and purposes. The South will never again allow a silver plank to be put in the national platform. Yet Mr. Bryan is tarred with that stick as badly as ever. He told his friends privately in the campaign of last year that, if he should be elected President, he would find some way to make Government payments in silver under the present law. As late as February 4 of the present year he wrote a letter to the Chairman of the House Committee on Coinage protesting against the pending measure to make silver dollars redeemable in gold, because, as he said, that would be "equivalent to the retirement of silver as standard money." Silver was actually retired as standard money in 1873. A standard is something by which measurements are made. To suppose that silver is standard money requires us to believe that 371¼ grains of the fine metal are worth a dollar, whereas anybody can buy that quantity for less than fifty cents. We mention this latest output of economic doctrine from Mr. Bryan merely to show that, whatever his party or the public generally may think of the silver question now, his views remain unchanged and apparently unchangeable. Therefore, the party cannot nominate him a third time without running against the same stone wall that destroyed its chances last year.

To get rid of the silver issue completely, it is necessary, accordingly, to nominate some other candidate than Mr. Bryan, and, as we have seen, first-rate candidates are scarce. Still, the Democratic party in ante-bellum times achieved considerable success with second-rate candidates. Polk, Pierce, and Buchanan could not be classed higher, nor could Van Buren at the time when he was nominated. Moreover, new and strong leaders often develop very quickly. Much will depend upon events to happen in the next three years and upon the issues that develop themselves meantime. The Republican party may fall asunder by reason of the tariff question, the Trust question, and the reciprocity treaties, all locked together as they are. New issues may be forced to the front by the still undetermined questions in the Supreme Court respecting the status of the Philippines. Our relations with Cuba may become critical. Thus the chapter of accidents may do something for the Democrats.

GREAT MIGRATION MOVEMENTS.

More than forty thousand "home-seekers," mostly native Americans from the States of the Middle West, are thought to have settled in the State of Washington during the past spring, as a result of twelve weekly "home-seekers' excursions" organized by the two northern transcontinental railways. There has probably been no other organized movement of population equal to this in the history of the country. It is a striking illustration of the mobility and enterprise of the Anglo-Saxon, which have made him the leading pioneer and colonizer, and of his sensitiveness to the attraction of cheap land, which has exerted so profound an influence in the building of new States.

In the history of interstate migration two sorts of tendencies appear—the unorganized movements of individual families, either alone or in small groups, and movements in bulk. The former is persistent and continuous, and the destinations are scattered, though the general trend has been westward, with now and then counter-currents, like those which stayed the growth of Kansas and Nebraska, six or seven years ago, or like those which stripped the over-boomed cities of the West of their surplus population at about the same time. The movement in bulk is occasional, and is always to some district more or less distinctly defined. This has been notably illustrated in the migration to the old Northwest Territory in 1788, to California in '49, to Kansas after the civil war, to the Dakotas in the early '80's, to the Klondike four years ago, and in the movements to Washington and to the Texas oil fields this year. The rushes of population to newly discovered gold or oil fields require no particular explanation. They are simply manias that afflict the more unstable and less thrifty elements of society. But the other movements involve the conservative and the thrifty, and are the result of more or less deliberation.

These movements are not adequately explained on the theory of the pressure of population. If this were sufficient cause, New England would be a fertile field for the railroad emigration agent, but it is not. Organizers of these latter-day migrations have given up New England in despair, and confine their attention almost entirely to the Central West, where the land is far from exhaustion and where the social features of farm life are as pleasant as in New England. A partial explanation probably lies in the fact that Washington

farm lands are cheaper relatively to the fertile lands of the Central West than they are relatively to the lands of New England. The farmer of the Central West who sells out and goes to Washington has a greater margin as capital, acre for acre, than the New Englander. Nor can the New Englander so easily find a purchaser. Furthermore, with the New England farmer the hope of bettering his fortune by migrating to new districts is less vivid than it is with the farmer of the Central West, whose father or whose grandfather had probably himself migrated. Finally, the enterprising New Englander has been drifting to the cities, and it is easier to transplant a farmer on a new soil than it is to persuade the city dweller to return to the soil.

Something more, however, than the knowledge that it is profitable to exchange high-priced but comparatively old soils for the cheap and fertile soils of the West is needed to dislodge the average farmer of any section from his home. There is an inertia that can be overcome only by force. In the movement to the Ohio country, a century ago, and that into Kansas, war gave the dislodging shock. In both cases large numbers of men, with their home ties weakened and their restlessness aroused by long campaigning, returned to find few opportunities for employment. But since the civil war it has been the railroads which have applied the dislodging force, in their efforts to build up the tributary population upon which depend traffic and the possibility of economical operation.

These large transfers of population from State to State must have a profound effect on the political and social life of the commonwealths that receive the newcomers, beyond the influence already traced by students of our institutional history. It is also obvious that when, as in the movement to Washington, the immigrants are thrifty and intelligent, the effects are bound to be for good. But if we may judge by the distinct difference in political ideas and in the efficiency of administration between the States that were largely settled before the civil war, and those that have been largely settled since, the immigrants have not always brought wisdom and rectitude with their household goods. That California, Nevada, Montana, and other mining States should have had a more or less undesirable experience is sufficiently explained by the character of the population usually attracted by mineral wealth. But why Michigan and Wisconsin, Iowa and Minnesota, and other States in the old Northwest should show so much greater political steadiness than Kansas, Nebraska, and the Dakotas, is not clear. Crop failures are perhaps sufficient to explain the periodical prevalence of unsound financial theories in the second group of States.

Whatever the explanation of this difference, the railroad emigration agent of to-day is an unconscious promoter of stability. It is to the interest of the railroad to sift from the "excursions" which it organizes all undesirable elements. It seeks thrifty and experienced farmers and mechanics, since it desires a permanent and industrious population, capable of developing a large traffic, and so well satisfied that every member will become a spontaneous advertiser of the new country. Thrift and skill are not usually found in conjunction with dangerous political theories, and the chances are that, when the population transplanted by the railroads has taken root, it will exert a steadying influence on the political opinion of the State where it settles.

BEAUTIFYING THE NATIONAL CAPITAL.

Every intelligent visitor admires the possibilities of Washington. Frederic Harrison, for example, has just expressed the opinion that "the youngest capital city of the world bids fair to become, before the twentieth century is ended, the most beautiful and certainly the most commodious." Mr. Harrison points out that Washington is the only capital which has been laid out from the first entirely on modern lines, with organic unity of plan, unencumbered by any antique limitations and confusions.

Nothing, indeed, could be better than L'Enfant's original plan for the city, yet a century has borne fruit in only fragmentary attempts at its development, and, as this English observer well says, Washington "still has the air of an artificial experiment in city architecture." Millions of dollars, for instance, have been expended upon public buildings, but these have been designed independently of each other, and set down, as a rule, wherever there happened to be a vacant space or somebody with "influence" had land for sale. Senator McMillan of Michigan, however, last March induced the Senate to vote enough money from its contingent fund for the necessary expenses of a commission of experts, selected through the agency of the American Institute of Architects, to work out a comprehensive scheme for the beautification of Washington. The choice fell upon Daniel H. Burnham of Columbian Exposition fame, Frederick Law Olmsted, jr., the eminent landscape architect, and Charles F. McKim of New York. The Commission prevailed upon Augustus St. Gaudens to act with them in an advisory capacity.

Had the country been searched from end to end, another such group could not have been brought together. The spirit in which these four men, recognized leaders in their respective professions, have made the Government a free gift of their time and talents, is as fine an example of patriotism as can be found in the history of the arts of peace. For more than two months they have spared no exertion, and it is expected that they will have their report finished by September. In its fulness it will not be disclosed till then, but a few of its special features are already known. One of them is the connection of the more important parks and pleasure-grounds by a generous driveway, so as to make them all essentially parts of one system. This has been ingeniously planned so as to include in the panorama woods, mountain streams, the Potomac River, with the hills beyond, the city's dock and shipping, several monumental structures, and possibly a section of the historic Chesapeake and Ohio Canal and a noble boulevard on the border of the District.

The Commission have given much thought also to the metamorphosis of that part of Rock Creek which winds through the western quarter of the city. In its passage through the National Park north of Washington, and thence through the Zoölogical Park—the latter already a charming specimen of Olmsted handiwork—it is picturesque and beautiful; but as soon as it crosses the city's boundary, its unkempt banks become an eyesore and its sluggish current a menace to health. The Commission are preparing to redeem it and bring it into the landscape as an ornamental feature.

A third object which they have considered carefully is the Mall. This was one of the finest things in L'Enfant's plan; a peaceful forest in the heart of a busy city, stretching from the Capitol to the river bank, nearly two miles away. But the fact that streets have been cut across it at intervals has furnished a pretext for treating each of the parcels separately. Thus the Washington National Monument grounds are laid out on one plan, and the Agricultural Department grounds on another; the Smithsonian Institution has a park of its own, the next three quadrangles have no treatment at all, and the Botanical Grounds are used simply as a place for planting a green-house. All this is patchy and undignified. What the Commission will aim to do is to restore the relations between all the parts as originally designed by L'Enfant, and to treat the entire Mall as a unit. This will admit of long vistas from the Capitol to the Monument, and from the Monument, pursuing the same direction for almost the same distance, to the river, thus affording an opportunity for an imposing water-gate as the western terminus of the system.

A bit of landscape which will receive special attention is the slope from the White House to the Potomac. A park treatment for this land, with the river brought into the background, and such a disposal of the Monument grounds as will permit of grouping there artistic memorials of a few of the nation's great

heroes, statesmen, and benefactors, are included in the project. There will be great satisfaction over the statement that no countenance will be lent to any proposal for radical changes in the White House itself.

All this preparation, made under auspices so admirable, encourages a hope that at last a serious movement for perfecting the capital city is under way. It has gone so far that the Commission now know what points will need further illumination before they give final shape to their report; and to this end they have just gone abroad, not to make any extended tour, but to visit certain places where other experts have solved problems similar to some of those which are still confronting them. Nevertheless, the cleverest reconnoissance is not an accomplished campaign, and, after the Commission have made a report satisfactory to the Senate, the House of Representatives must still be reckoned with. In view of this, it is fortunate that in all the work they have sketched they have kept economy in mind, never sacrificing an important demand to a close-strung purse, yet, where variant methods of equal excellence are possible, always choosing the least expensive.

Another fact which can hardly be ignored by Congress is the confidence which the Commission have commanded from the very outset among officers of the Government generally. The Supervising Architect of the Treasury, who is to design the new Department of Agriculture, has volunteered his coöperation, so as to make the position and character of that edifice harmonize with their plan. The Secretary of War has called them into consultation, in like manner, with regard to both the Grant Memorial and the additional building at the Soldiers' Home, for which Congress has made him responsible. Secretary Gage and Professor Stratton, who are to build headquarters for the new Standardizing Bureau in the neighborhood of the National Park, have sought their assistance. The same flattering welcome proceeds from all sides. It is a spontaneous tribute to the wisdom of inviting artists to pass judgment on art questions, and of treating the American taxpayer now and then to the novelty of a work of national importance conducted for the public benefit alone, and with nothing "in it" for any of the professional politicians.

THE LAW'S DELAY.

The disagreement of the jury in the Kennedy murder trial is on many accounts unfortunate. It amounts to very much the same as the Scotch verdict, "Not proven." The tendency of such occurrences is, of course, to impair public confidence in our system of administering justice. After three attempts, entailing great expense on the community, not only in money, but also in the time of the court, the matter stands just where it did three years ago. The expense to the prisoner, who has had to withstand the whole force of organized society, must have been ruinous, and he still remains liable to be put in jeopardy of his life. We cannot deny that the evidence was very conflicting, or that the impression prevails that perjury was committed by some of the witnesses for each side. Hence it is hardly proper to maintain that in this case there was a peculiarly aggravated failure of justice; but there has certainly been such delay as to cause grave dissatisfaction.

The Molineux case is another example of the same evil, and several other cases are notorious. The United States Supreme Court has lately granted a further lease of life to Nordstrom, the crime for which he was sentenced having been committed in the State of Washington eight or nine years ago. The case of Mrs. Botkin, convicted more than two years ago of murder by means of poisoned candy sent through the mail, has been postponed indefinitely, and she will probably escape. However criminologists and jurists may differ on other points, they agree with the mass of mankind that certainty and swiftness are essential if punishment is to be effective. Experience proves that after a certain amount of time has passed, it is almost impossible to hang the most depraved murderer. The stars in their courses fight for him. Public interest in his crime has languished, and prosecuting officers miss its stimulus. Witnesses have died or forgotten or become indifferent; and at last the criminal escapes simply because the world has lapsed into a hazy indifference concerning his guilt, and would even regard his execution with disapproval—sympathy with the living murderer displacing the original sympathy with his victim.

Those having to do with criminals tell us, what we should expect to be the case, that the existence of these possibilities of delay enters into their calculations. Penal statistics thus lose much of their deterrent effect. What is worse, the community is apt to calculate in the same way. The prevalence of lynching in several of our States is confessedly due to the maladministration of justice. The mob, in any community, would kill a murderer caught red-handed, were it not restrained by the sober element; but when the sober element believes that the murderer will escape justice if he is legally tried, it will not interpose in his behalf. Conservative men have been heard to reason that a criminal trial, as now commonly conducted, will involve the county in an expense which the taxpayers can ill bear, and that in the end the criminal will very likely escape. It is better, they think, to let the mob inflict the natural penalty of murder while it will be effective, rather than to pay a high price for legal proceedings which are futile and demoralizing. The argument may be fallacious, but it is plausible.

The people of New York are justified in complaining of the administration of justice here, because there are communities where such delays do not prevail. The recent Bosschieter case in New Jersey was conducted in such a way as to make every citizen feel respect for the law and admiration for its prompt and effective application. A competent jury was empanelled with business-like expedition, and the whole trial was over within less time than a New York court would have spent in filling the jury-box. In Massachusetts it would be thought strange, if not scandalous, were it to take a day to obtain a jury, even in the most important cases. In England there are no such delays as we are familiar with here. It seems a proper inference that methods which succeed in communities essentially like our own would succeed if we adopted them. In a sense the public is responsible, in that it chooses legislators incompetent to deal with any matters not affecting their personal or party advantage; but a peculiar responsibility belongs to the legal profession. Society depends on its members as on its physicians; and duty to society requires them to make a combined effort to improve the condition of its criminal law.

In addition to a reform in our methods of obtaining juries, the time seems opportune for regulating the subject of expert evidence. Perhaps it would be extravagant to say that if it were excluded altogether, justice would not the more frequently miscarry; but it obviously requires stringent limitation. We do not hesitate to say that when the similarity of writings is an issue, the judgment of the ordinary juryman is often clearer without the testimony of experts than with it. He cannot accept the opinion of one expert as authoritative, for there is another to contradict him; he cannot qualify himself as an expert by listening to them; and in the end he has to fall back on his own judgment, or else give up the problems in disgust. If juries do not find evidence sufficient to hang a man without relying on the testimony of experts concerning his handwriting, they are not nowadays likely to hang him at all.

The large question of appeals in criminal cases, and especially of appeals on minor technicalities, we cannot now consider. Probably few men acquainted with the subject would maintain that the rights of innocent men are endangered by the English practice, where no appeals from the judgment of the trial court are allowed. With the legal advantages enjoyed by the prisoner, as an inheritance from past struggles with arbitrary power, he would be still amply

protected were his fate settled once for all. Some human being must finally settle it, and that human being might as well sit in one court as another. If appeals cannot be abolished, they can certainly be limited and expedited. A court of criminal appeals, if established, would relieve the Court of Appeals of a large number of cases which now interfere with its disposal of its proper business. At all events, the present condition of affairs should arouse members of the bar to concerted action for reform.

THIS YEAR'S SALONS.

PARIS, May, 1901.

The two Salons have never had such fine quarters before. That was my first impression of this year's exhibitions in Paris. They are now both established, side by side, in the Grand Palais, separated only by a couple of turnstiles—one up stairs, one in the sculpture court—and by an extra franc to pay. The old Salon occupies the larger wing, where the Decennial collections hung last summer, and, consequently, has the benefit of the imposing main entrance facing the Avenue Nicholas II.; the new Salon must be content with the smaller wing, devoted to the Centennial collections, and, therefore, must be entered through the old Salon or by the less conspicuous door facing the Avenue d'Antin. Even the unequal division of the buffet, which they share between them, explains that, popularly, the old Salon still holds its own.

That artists are passing through an interval of fatigue was my second impression. It would have been almost worth while, I thought, had they agreed to rest a year and recover from the exhausting demands of last summer. There was talk during the winter of the revolt of French artists against the foreigner and his growing ascendancy. The old Salon, it was said, would hereafter find less space for him on the walls; the new Salon questioned the wisdom of continuing to grant him equal voting rights. There have been rumors, too, of a split with a certain little set of Americans in Paris. But it would be useless here to enter into questions, really, of diplomacy. Whatever the cause, it is a fact that Americans make far less of a showing at the new Salon than usual. Mr. Whistler, who, however, stands apart, not to be identified with any special set or group, and who has never been a regular contributor, sends nothing. And, in gallery after gallery, I looked in vain for Mr. Sargent, Mr. Alexander, Mr. Alexander Harrison, Mr. Dannat, Mr. Melchers. In the sculpture court, to my disappointment, Mr. St. Gaudens also was to be counted among the absent.

But it is not only the Americans who have stayed away. M. Boldini makes no contribution; neither does M. Roll, nor M. Helleu, nor M. Lepère as painter; M. Dagnan-Bouveret has but one (not very remarkable or important) portrait. The number of paintings has decreased literally by hundreds, though this is not entirely a drawback, and the impossible light in many of the rooms is said to be the reason. Altogether, I have seen the new Salon at once gayer and more interesting, more daring, and more accomplished. Compared to the old Salon, however, it still makes up in distinction what it loses in popularity; it still attracts the most distinguished artists of the day, and, moreover, it still hangs their work with the due amount of respect. The painter's pictures are grouped together, a margin of space allowed to each, and not fitted anyhow into a mad mosaic of frames. It is high time all artists realized how much they profit by the intelligent hanging that puts the critic and the visitor into good humor at the start.

It is right that the chief centre in the picture-galleries up stairs should be reserved for Cazin, who will never again hold any place in any gallery of contemporary work. His loss is serious to modern landscape painting. He had grown mannered, it is true, but, for that matter, even Corot, a far greater man, might be accused of mannerism. It is impossible for an artist to have his own way of seeing and feeling the things he sees, without developing a way of his own in expressing himself, and Cazin's was one full of refinement and charm. This last group is characteristic—a little, quiet canal, a broken-down mill, a wagon coming slowly along a monotonous stretch of road, simple unpretending houses by the wayside, each the motive for the scheme of tender grays in which the world always presented itself to him, and each a proof of the truth he seemed for ever trying to prove, that, to the artist, there is poetry, there is romance in the barest or most suburban landscape, if only he has the genius to know it. In the midst of these pictures is his large "Souvenir de Fête à Paris" of 1881, a decorative allegory, it might be called; the figures of Science, Labor, and Art, on a high scaffolding in the foreground, that overlook the domes and towers, beautiful in the blue night, of the city they have adorned. Compared to the *machines* of the old Salon and a few that have crept into the new, it is useful as a reminder that an effect can be obtained in a large composition of the kind, even if the figures keep their place well within the picture, and the color-scheme is subdued and harmonious.

After Cazin, there is the usual variety of landscapes, from the violent sunlight of M. Claus to the sombre brown fantasies of M. Griveau, from the scientific arrangements of dots by M. Eliot to the learned realism of M. Lhermitte. Many are really very charming; men like M. Morrice, M. Ménard, M. Lagarde, and a dozen more, have a pleasant sense of color that seldom fails them. But they are more than mannered; they have reduced Nature to a formula, to which she must, always and everywhere, conform; they seem to shut themselves up in their studies and evolve landscape from their palettes, until, I must confess, I turn with relief to the solid, straightforward realism of M. Lhermitte, who has the courage to go to Nature herself for inspiration, and the ability to give a pictorial value to the record of his observations.

M. Carrière, M. Besnard, M. Aman-Jean, are all three fairly well represented. Life grows more and more tragic to M. Carrière as the mist through which he sees it thickens. In the Petit Palais, but a couple of minutes' walk away, there is this summer an exhibition called "L'Enfant à travers les Âges," where I found, among the pictures, a portrait of a little boy with a dog, by M. Carrière, painted in the eighties, showing that he had not then begun to suggest the mist that now envelops his figures, or as much as hint at the gloom that has settled upon him until the simple "Baiser du Soir" of mother and children, as in this year's picture, seems to him a tragedy of infinite sadness; color has all but disappeared, form threatens to follow, and it is the greater pity because M. Carrière, whatever he does, reveals himself always the artist, never the mere vulgar sensation-monger.

It is the same with M. Aman-Jean; his portraits, almost always an excuse for a decorative arrangement, are fading into shadows, anæmic and illusive, but, at least, they are shadows created by an artist of refinement. M. Besnard is decidedly more robust; with every canvas, he attacks a new problem and brings to it fresh vigor. This time it is the study of the nude in the early dawn or the paling firelight, to which he gives the title "Féerie Intime," and you see that the woman, who crouches low down in a large chair, leaning back against gorgeous draperies, while, beyond, the detail of a luxurious room is dimly suggested by the flickering flame of two candles, interested him far more because of the difficulty of the curious foreshortening than any question of beauty. The pose is positively clumsy (the greater prominence of the legs throwing the head back in unpleasant shadow), but the treatment is masterly. You are sure to find artists gathered before it, just as you come upon the crowd in front of M. Béraud's latest scene from the New Testament—"The Scourging of Christ"—interpreted according to his essentially modern method. M. Besnard is the exception. The greater number of artists who exhibit have, like M. Béraud, the tendency to repeat, each time with renewed emphasis, the effect or subject which made their reputation or chief success. M. Raffaëlli's streets, accomplished as they are, become but variations of the same scheme in gray; his one large portrait of a woman, an exercise in white. M. Cottet, who continues to paint the Breton peasant; M. Simon, who loves the baser popular types only less than the bourgeois, both strive so strenuously for vigor that at any moment they may overstep the mark and tumble into the slough of brutality. M. Gandara, in his full-length portraits of fashionable women, is still engrossed with millinery, and no wonder, perhaps, so well does he render the richness and gloss and sheen of his silks and satins. The work of all these men has many admirable qualities. It is only that, describing in one short article, the chief features of the exhibition, I must point out as the most notable a general tendency to insist upon the characteristics thought to accentuate the artist's individuality.

I am conscious of this even in M. Rodin, though I hesitate to say so. When so great an artist is concerned, one questions whether one's own judgment is not at fault. But still, I cannot help thinking that, in his pursuit of the ideal, in his recent endeavors to express in marble or bronze emotions and thoughts for which neither is the appropriate nor the sympathetic medium, he has become too disdainful of the beauty and purity of form which is the very basis of great sculpture. He shows this year his Victor Hugo—not the entire monument, with the two muses or spirits or whatever they may be, but simply the figure of the poet. The cast was in

his exhibition of last summer, and, if I am not mistaken, has also been seen in a previous Salon. It will be remembered that Victor Hugo is represented, "naked as a god, strong as a giant," lying among the rocks by the seashore; and I must confess that every time I see it I feel this nudity to be a serious error. Not from any false idea of propriety, I hasten to add; but because it seems to me as inappropriate to the great poet of Romanticism as a Worth gown would be to the Greek Aphrodite or a Lincoln and Bennett hat to Hermes. The modern coat and trousers are a terrible problem to the sculptor, I admit, but, in my opinion, he is wiser to face it bravely as Mr. St. Gaudens has done in memorable monuments, than to hope to escape it, as M. Rodin does when he wraps his Balzac in a melodramatic cloak and leaves his Hugo in heroic nudity. Again, the outlines of the design as a whole are awkward, without harmony of balance, while the colossal outstretched hand and arm distract attention from the really noble and beautiful head. No, I cannot, much as I should like to, find unqualified pleasure in this, perhaps the most ambitious of all M. Rodin's larger works.

But there is very little else in the Sculpture Courts. M. Saint-Marceaux's statue of Alphonse Daudet seems commonplace itself after the Hugo. The exceptions are a beautiful little group of nude figures of women in high relief, "Le Secret," by M. Bartholomé, somewhat in the manner of his "Tomb," and one of M. Meunier's characteristic versions of the miner at work. But, for the perfectly successful piece of sculpture this year, you must go to the Royal Academy and to Mr. Sargent. His "Crucifix" for the Boston Public Library is, as the model, shown a year ago, promised, no less noble in its solemn beauty and dignity than any ever designed in days when artists were vowed to the service of religion. He has adhered to the old Giottesque form, but, below the outstretched arms of the Saviour, Man and Woman, bound to the cross by the long end of the folded cloth, bend low to receive the blood of the Redemption. The serpent, symbol of the fall, is intertwined with the two figures in beautifully decorative curves; below is the pelican, feeding her young. It is curious that Mr. Sargent in this work is as reverential and emotional as, in his portraits, he is apt to show himself guileless of respect for his sitters and with no depth of feeling of his own.

Had I space, I should like to write of M. Carolus-Duran's fine little "Enseigne du Maître d'armes," dating back to 1873; of the portraits of M. Desboutin, deliberately old-masterly; and M. Blanche, as entirely modern; M. Zorn, to whose flamboyancy a curb is needed, and M. Edelfelt; and the large "Promenade après la Course de Taureaux," by M. Zuloago, a Spaniard who evidently understands that the earlier painters of his country who adopted a convention for the rendering of its brilliant light, were wiser than the followers of Fortuny, who struggle to outshine the sun on their canvas. But, as I have referred to the Americans who do not show in the new Salon, I should at least mention the few who do. Mr. Abbey has a long panel, "Galahad the Liberator," doubtless one of the Boston Library series. But it is too badly hung to be criticised one way or the other. There is an excellent little series of interiors by Mr. Gay; and Mr. Humphreys-Johnston, Mr. Mark Fisher, Mrs. MacMonnies, Mr. Fromuth, are all represented; but, on the whole, the American group has made a more distinguished appearance in previous shows.

As usual, much of the most vigorous work is to be found among the drawings and prints; but, unfortunately, it is this section, arranged in the down-stairs rooms, that suffers most from the bad lighting. Pastels by many men of many methods, from M. Aman-Jean to M. Milcenpeau; the experiments in color-prints of which I have often had so much to say, by M. Lepère, M. Jeanniot, M. Raffaëlli, and many others; lithographs by M. Carrière; etchings by M. Rodin and M. Bracquemond; drawings by M. Legrand and M. Vierge—these are some of the most important exhibits. Two distinct shows are also included—one, of M. Tissot's drawings, to illustrate the Old Testament; the other, of M. Renouard's, to illustrate last year's exhibition. And more remarkable is the series of cartoons by M. Besnard for the decoration of the hospital Cazin-Perrochaud at a rapidly growing seashore place near Étaples. If the number of pictures is decreasing in the new Salon, it is a pleasure to find that the space allotted to the decorative arts is increasing. This section has never been seen to such advantage.

I have said nothing about the old Salon, because so little is to be said. Many good things may be hidden away on the crowded walls, others may be killed for the moment by the bad hanging. The men who have the right to the line and chief centres are neither better nor worse than in the past; M. Pointelin and M. Harpignies again, as so often before, are the most conspicuous exceptions. Among the American painters who exhibit are Mr. MacEwen, Mr. Hitchcock, Mr. Bridgman, Mr. Bicknell, and Mr. Bisbing. Some of the best examples in sculpture and black-and-white, though it is in these sections the old Salon always reveals most accomplishment, are by Americans—Mr. MacMonnies's statue of General Woodward, Mr. Pennell's etchings, Mr. Wolf's wood-engravings. N. N.

Notes.

Henry Holt & Co. have in press a new 'French and English Dictionary,' by Messrs. Edgren and Burnett, with especial attention to pronunciation and its indication by a novel system, as well as with indications of etymology and the date of earliest appearance of any given word. The vocabulary will be exceptionally large.

'Tolstoy and his Problems,' essays by Almer Maude, who enjoys the great Russian's acquaintance, is announced by A. Wessels Co.

James Pott & Co. are about to publish 'The Practical Life-work of Henry Drummond,' by Cuthbert Lennox, a former associate of Professor Drummond. Mr. Mabie furnishes an introduction to the work, which contains two fine portraits and a drawing.

Now to appear through E. P. Dutton & Co. are 'How Sailors Fight,' by John Blake, a work showing the organization of the British fleet in peace and in war, with numerous tactical and other illustrations, and 'The British Thoroughbred Horse,' by William Allison, M.A., with lists of winners at the Oaks, Derby, and St. Leger.

The clever artist, L. Leslie Brooke, is to illustrate a second collection of rhymes and songs from Lear's Nonsense Books, to be styled 'The Jumblies.'

The 'Anting-Anting Stories' of Sargent Kayme, which will bear the imprint of Small, Maynard & Co., pertain to the Philippines.

The 'Notes on English Etymology,' soon to be issued by the Oxford University Press, from the pen of Professor Skeat, will contain an autobiographical introduction and a portrait.

Mr. Charles Welsh, whose address is in care of D. C. Heath & Co., Boston, would like information as to the American publishers who first reprinted Oliver Goldsmith's Works as they appeared in England; and who first published a collective edition of them.

Preston & Rounds Co., Providence, R. I., have in press for subscribers 'The Dorr War; or the Constitutional Struggle in Rhode Island,' by Arthur May Mowry, with an introduction by Prof. Albert Bushnell Hart, as well as maps, plans, and illustrations. It will be printed from type.

A new Life of Nathan Hale, the Revolutionary patriot, is to be written by Prof. H. P. Johnston, and published as a privately printed work in a limited edition from the De Vinne Press. The illustrations will be notable, including nineteen artotypes of relics, letters, documents, statues, etc.

Early next month D. Appleton & Co. will bring out Adams's 'Commercial Geography,' with numerous fresh maps and diagrams.

A new publishing source is the recently formed Society for the Protection of Native Plants, whose leaflets will aim to reach thoughtful people in general, and teachers, scholars, flower missions, and village-improvement societies. Further information may be had from Miss Maria E. Carter, Curator of Herbarium, Society of Natural History, Boston, Mass.

Mr. E. S. Shuckburgh has prepared for the Cambridge Series for Schools and Training Colleges a 'History of the Greeks,' published at the Cambridge University Press (New York: Macmillan). His aim ("so to state the old story—modified by recent studies and discoveries—as to suit the needs or tastes of certain classes of students") is not so definite as to give one an opportunity to demonstrate that it has not been attained, and still he has not written a book which one can well call a pronounced success. He has compressed into 370 pages a vast amount of information, but he has failed, as he has failed in other of his works, to put his thought in attractive form. The difference in this respect between his work and that of Dr. Botsford of Harvard, whose 'History of Rome' was recently reviewed in these columns, is very great. Perhaps the latter has the advantage in something more important even than a ready command of good English—a coherent grasp of his period as an organic whole. In the earlier chapters especially, Mr. Shuckburgh's facts certainly give too much the impression of being told each for its own sake; one cannot feel that he is moving constantly toward a definite goal. No teacher needs to be reminded that this means both increased labor and less satisfactory results to the average student. Dr. Botsford's constant cross-references and definite citation of original authorities are features which Mr. Shuckburgh might well have adopted. It is true enough that many students make no use of such helps, but, af-

ter all, a work of scholarship should bear in mind always the few who do. While the question has nothing to do with the 'History of Greece,' Mr. Shuckburgh's practice leads us to ask why it is that so many writers of English find it impossible to keep the word "only" from trickling off their pens anywhere from one to a dozen words in advance of its logical position.

The long period of waiting for the index volume to Tyrrell and Purser's 'Correspondence of Cicero' has doubtless led many to suppose that it would be an exhaustive piece of work when finished. The result does not justify the expectation. We get "mainly an index to the introductions and the notes," with no pretence to completeness in the matter of personal names, since "every advanced scholar possesses an Onomasticon of Cicero's works." Room might have been found for a great deal of omitted material by dropping some hundreds of useless definitions from the index. The "advanced scholar," with the works which are usually found on the same shelves with his Onomasticon, does not need to be told in an index entry that *contendere ad summa* means 'to aim high'; *contionem habere*, to 'deliver a speech'; *jure consultus*, 'learned in the law,' etc. When will writers learn that any work of scholarship worth producing at all is worth a complete and accurate index?

The translation of Lazarus's 'Ethik des Judenthums,' by Henrietta Szold ('The Ethics of Judaism,' Jewish Publication Society), has reached a second volume, containing chapters iv. to vii., with an appendix. The same simply objective and expository attitude is maintained, and, outwardly, at least, there is no touch of the apologetics or polemics deprecated by Professor Lazarus in his preface. But, in spite of all this, the reader cannot help feeling that the spirit is really apologetic; that the best side of things, morally and intellectually, is being turned outwards. Nor is any other spirit on the part of a Jewish writer describing Jewish thought conceivable with the European situation as it is. However much a placid objectivity may be sought, the mind of neither writer nor reader can be shut to the anti-Semitic rage. The one must feel on his defence, the other be curious as to what form the defence will take. For one concrete example, no one could possibly read the sections dealing with the Talmudic view of *dolus* in the technical sense, without making application one way or another. And so, most unfortunately, Professor Lazarus's method cannot but give the impression of an avoiding of issues and a slipping over of contentious matters; unfortunately, because the method is sound and good, even if it is applied in somewhat abstract and vague terms. Those who are prepared to follow Professor Lazarus throughout will, no doubt, find his book very "edifying"—that is probably the right word. Those who are not, will find it stimulating and suggestive of questions as to other (and unmentioned) Talmudic attitudes, ethical and logical.

These will be found in abundance in such a book as Dr. Rodkinson's translation of the Babylonian Talmud, of which a new volume, containing the second half, chapters v. to x., of *Baba Metsi'a*, has just appeared. It deals with the law of hires and contracts as applied to laborers, cattle, etc., the sale and leasing of horses and real estate, partnership, etc. The ideas there upon borrowing, for example, have a striking resemblance to those of Mr. Harold Skimpole in 'Bleak House.' He borrowed two arm-chairs, and, when he returned them, much the worse for wear, marvelled at the owner's remonstrances. "Did he think that arm-chairs were made to be put on a shelf and looked at?" The Talmudic law (p. 255) seems to hold with Mr. Skimpole. A man borrowed a cow; it became lean, even died; but did he borrow it "to put it under a canopy?" "If you bring witnesses," ruled Rabh to a man who had borrowed an axe and broken it, "that you used the axe legitimately, I will acquit you." But the matter assumed further subtleties. A man borrowed a cat to war against mice. The cat was a greedy cat, and over-ate itself on mouse, and died. Did the cat die in the course of its legitimate labors? The court seems to have declined to rule, and to have cut off the case with a proverb. Are these adjudged causes from the seaboard territory of Bohemia, or are they real efforts to work out a system of casuistry? But it must not be thought that all of the book is of such airy texture. The student of the history of law who neglects the Talmudic system misses much instruction as well as much amusement. We are glad to see that a second edition of the tractate, *Rosh Hashana* —the eighth of the second division—has been called for, and has appeared. Dr. Rodkinson should notice that the variant reading of Hagg. ii. 1, found in the Talmud, which puzzled both him and Rashi (note on page 5), is that of the Septuagint. The rabbis seem not to have been always bound to the Massoretic text.

In an appendix to the second edition of Dr. Friedrich Delitzsch's brief pamphlet entitled 'Babylon' (No. 1 in the *Sendschriften der Deutschen Orient-Gesellschaft*), under date of February 1 of this year, announcement is made of three important discoveries in Babylon: First, the location of the famous Marduk Temple, Esagila, described with such particularity by Herodotus, and referred to so frequently in all the Babylonian inscriptions. It is covered by the ruin mound known as Amran. This mound, on which stands a ziara, or sacred tomb, lies quite close to the modern village of Jimjimeh, and parts of it, owing to the burrowings of the antiquity ferrets of that town, look like a rabbit-warren. The Temple lies buried under such a mass of rubbish that no one had ever penetrated into it. The second discovery is that of the great procession street rebuilt by Nebuchadrezzar and named Aibur-shabu. Slabs of the limestone with which the street was paved have been found, bearing the inscription, "Nebuchadrezzar, King of Babylon, son of Nabopolassar, am I. The street of Babylon I have paved gloriously for the procession of the God Marduk, the great god, with tablets of limestone. Oh! Lord Marduk, grant everlasting life!" The determination of the position of this street has led also to the determination of the position of the wall, Imgur-Bel, the great inner wall of Babylon. The third discovery of importance was that of the Temple E-mach, the sanctuary of the goddess Nin-mach, the giver of fertility, in the ruin mound of Kasr, about the centre of the Babylonian complex of ruin mounds.

We have on one or two occasions called attention to the work of a group of scholars at Brussels who have made excellent contributions to the study of English literature and philology. This group includes Dr. Paul Hamelius, whose 'Kritik in der Englischen Literatur des 17. und 18. Jahrhunderts' was reviewed at length in these columns; M. Paul de Reul, whose essay on Ruskin and more recent study of the syntax of Caxton's 'Reynard the Fox' are deserving of wider recognition in America; M. Vermeylen, Professor Logemann, and others. Their latest contribution to their favorite study comes to us in the form of a study of 'Arthur Wing Pinero und das Englische Drama der Jetztzeit' (Brussels: "La Gutenberg"), by Dr. Hamelius. This is the first satisfactory treatment of Pinero's work in its relation to the acted drama of the later nineteenth century. Particular stress is laid on the dramaturgic skill and the power of logical development in Pinero's plays; and, while indicating the dramatist's inferiority to certain of his contemporaries in France and Germany, Dr. Hamelius has shown in what particular direction his plays may be regarded as epoch-making in the history of the later English theatre.

The June number of the *Harvard Graduates' Magazine* is remarkable for its frontispiece, a facsimile of the title-page of a book lately discovered in the library of Emmanuel College, Cambridge, England, by its librarian, Mr. E. S. Shuckburgh. The work, 'A Retection, or Discoverie of a False Detection' (London: 1603), belonged to John Harvard, as appears from his autograph signature, and, with the exception of one volume in the Harvard Library, plucked from the burning of the John Harvard bequest in 1764, is the only one known to be his and still extant. In a note to Professor Norton, here published, Mr. Shuckburgh says: "On the title-page I was charmed to see *libellus Johannis Harwardi*," whereas the facsimile shows *liber* and not *libellus*. The librarian's eye evidently drooped to the line of text immediately below the signature, where the word *Libeller* occurs. The college fence—gates and panels—is rapidly assuming complete continuity, but classes or individuals debarred from sharing in this beneficent mania are invited to help erect an Emerson Hall for the department of philosophy and Professor Münsterberg's laboratory, or to establish special funds for the Library, or another for the musical department, or another (still grander) for the Arnold Arboretum. The *Magazine* prints the new rules governing the Harvard Union.

The dikes of Holland and their part in the development of the Netherlands are lucidly described in the *National Geographic Magazine* for June, by G. H. Matthes. He notes the effect of the destruction of the forests which once covered the whole country in the alarming recession of the coast line, amounting at some points in eighteen centuries to as much as six and seven miles. A brief sketch of the efforts to defend and reclaim the land closes with a reference to the elaborate system for flooding, which forms part of the military defences of the lower provinces. Dr. Navarro concludes his account of Mexico with some figures showing its satisfactory financial condition, and statements of what is being done for the improvement of the army. In an outline history of China Mr. John Barrett repeats the old assertion that the Emperor Hwangti ordered the destruction of the libraries that he might go down to posterity as the *first* King of China.

Man's influence upon the earth is treated

by Professor Woeikof of St. Petersburg in the *Annales de Géographie* for May, in relation to the modifications wrought by cultivation and deforestation on the temperature, winds, and rainfall. He deprecates the increasing disassociation of man and the soil, not simply because of the physical and moral deterioration resulting from urban life, but from its injurious effects upon the soil itself. Taking Java as a basis for his calculations, having a territory of equal extent with North Carolina, and an agricultural population of twenty-eight millions, living mainly on the products of rice plantations which occupy less than one-sixth of the island, he estimates that the tropical belt of thirty degrees north and south of the equator could support ten thousand millions of inhabitants. The boundary dispute between the Argentine Republic and Chili has had an unexpected result in adding greatly to our knowledge of a most interesting region, as is shown in the article descriptive of the Patagonian Andes. It is condensed from the documents and accompanied by the admirable map submitted by the Argentine Government to the arbitrators, along with some striking photographs of typical scenery. Attention is also directed to the important addition to the cartography of Europe by the completion of the topographical survey of Italy, begun thirty-eight years ago.

—It is an unusual thing to have a naval officer take the part of a Constitutional student, and sketch with a bold hand the greatest defect in our representative system of government. Yet an officer well known to the public during the Spanish war as the captain of the *New York* (F. E. Chadwick) has done this in a brief pamphlet entitled 'An Unsolved Problem in Our Governmental System.' Capt. Chadwick was for some years our naval attaché in London and for some years on departmental duty in Washington. By the simple process of keeping his eyes open in each country, he fitted himself to discern the governmental evils which exist, but which need not exist, in his own; and by studious analysis he has reduced the problem, which must sooner or later be solved, to two words, "Legislative Responsibility." The essential elements of legislative responsibility, he holds, are publicity, discussion, and political responsibility; and of these in our Federal legislation at this time, he asserts, we have substantially none. The actual situation, as he depicts it, is this: "Congress, as a body, has ceased to legislate. It has turned over the work of formulation of legislation to a large number of petty legislatures within it, with rarely any publicity, with no public discussion, and subject to the malign influences which any secret or semi-secret system necessarily courts. It is a method which traverses the most fundamental principle of legislation for a free country, viz., Publicity."

—The remedy, Capt. Chadwick thinks, and one fortunately near at hand, is the "bringing into existence a body of members from the majority who shall be responsible for the character of legislation brought forward *by their party*, and upon whom and *upon the party they represent*, responsibility shall rest unavoidably." He well says that in doing this we should seek to avoid any violent departure from existing methods. The immediate method which he suggests is that all "political committees" shall be appointed *"from the majority only"*; and that the party responsibility assumed and exercised by an English Ministry shall be assumed and exercised by a committee of the House, which committee (composed entirely of members of the party in power) shall exercise the powers now exercised by the Committees on Appropriations, on Ways and Means, and on Rules. In a word, there should be a Committee of Control, which would be responsible for taxation on the one hand and expenditure on the other; for the business which is brought before Congress and for the reformatory measures which are now smothered by standing committees. Capt. Chadwick's pamphlet, which has an obvious bearing on the irresponsibility of party platforms, one of the crying evils of our degenerate state, does not bear a publisher's imprint, but, we have no doubt, any reader interested in the subject can obtain a copy by applying to him. His address is the Naval College, Newport, R. I.

—Those who share the sometimes expressed apprehension that the higher education of women is adverse to matrimony, may find comfort in the fact that the graduating class at Smith College chose "The Taming of the Shrew" for the regular "senior dramatics" last week. If this means that the students at that institution subscribe to a doctrine of liege-lord submissiveness finally arrived at by *Catharine*, one obstacle is evidently removed by public proclamation. The selection, in fact, however, was between this play and a repetition of others which, in a goodly number of years, have been more than successes of esteem, often spectacles of peculiar loveliness. Quality was thus sacrificed to novelty, for "The Taming of the Shrew" is, for interest and value in histrionic training, vastly inferior, say, to "A Midsummer Night's Dream," "The Merchant of Venice," or "The Winter's Tale." We might pass the consequent failure to create a body of local stage tradition renewed by repetition at decent intervals. On the other hand, the highest non-literary utility of cleaving to Shakspere is instruction in the art of elocution, and this reaches annually a much larger class than the participants who disperse on the morrow. The diction of "The Taming of the Shrew," it need not be said, does not approach that of the plays just mentioned, to name no others. One who witnessed the second performance, on Friday night, felt again the defective intelligence shown too often on this recurring occasion. Least open to such criticism was the impersonator of *Catharine*, who easily surpassed *Petruchio* in her reading; yet she bore her mannishness well, and played with a spirit comparable to that of the attractive Shrew. Both in appearance and in evenness of acting, the young women who sustained the four leading parts were above the average; and not a few of the male parts did not betray the sex. With so much beauty attaching to the main action, it is a pity that the comic parts were not more restrained, in by-play and otherwise; but this seems to be a standing fault of the trainer. The staging was very effective and refined.

—In the annual report of the President of the American Museum of Natural History, is given a summary of the work accomplished during the past year by the different exploring expeditions under the control of that institution. The Jesup North Pacific Expedition dispatched a party to the Amur River in Siberia, and Dr. Berthold Laufer, who was in charge, collected much information relating to the Gold, Gilyak, and Ainu tribes, and made illustrative collections. Another party, sent to the Sea of Okhotsk, includes Waldemar Jochelson, who will study the Koryak and Yukagheer; Waldemar Bogoras, who will make researches among the Chukchee; and Alexander Axelrod, who will do anthropometric work among these tribes. Dr. Franz Boas has continued his researches among the Kwakiutl Indians on Vancouver Island, Livingston Farrand his work among the Quillayute on the west coast of Washington, and James Teit his investigations among the Chilcotin Indians. A. L. Kroeber has remained in charge of the Mrs. Morris K. Jesup expedition, and has pursued his study of the symbolism of the Arapaho Indians. The task of collecting among the fast-vanishing tribes of California has been successfully carried on by Dr. Roland B. Dixon, of the Huntington Expedition. He visited the Maidu Indians, in the foothills of the Sierras east of the Sacramento, as well as other tribes, for comparative study. The conditions among the Indians of Oregon are such that the extinction of several tribes is imminent, and this induced the late Henry Villard to provide for an expedition to this region. Dr. L. Farrand has accordingly made a thorough investigation of the Alsea, now reduced to about a dozen individuals, and has secured a valuable collection of specimens illustrating the primitive life of several other tribes. During the winter of 1899-1900, Mr. Saville of the Mexican Expedition explored the ruins of Mitla and vicinity, and noted many important facts concerning the architecture of the buildings composing this noted group. Several subterranean chambers, the walls of which were in some instances elaborately ornamented with mosaic work, were found at Mitla. Dr. A. Hrdlička and W. Orchard of the Hyde Southwestern Expedition, have carried on anthropometric and other ethnological research in New Mexico, Arizona, and southern Colorado, obtaining the measurements of over nine hundred Indians, many physical examinations, eighty facial moulds, and over five hundred negatives of the people and their occupations. Mr. Bandelier's explorations of ancient tombs in the vicinity of Lake Titicaca have resulted in the acquisition for the Museum of many trephined skulls, specimens of pottery, and other objects of interest. Ernest Volk has made further studies of the glacial gravel and other deposits in the Delaware Valley, and has found specimens of the handiwork of man under conditions which prove their contemporaneity with the formation of certain of these deposits. Mr. Harrington, in the course of his explorations in New York and its vicinity, has discovered an ancient village site on Long Island from which he collected pottery, stone implements, and several skeletons.

—'A Life of Napoleon Bonaparte,' by Ida M. Tarbell (McClure, Phillips & Co.), represents the second edition of a book which was made up in 1895 out of articles taken from *McClure's Magazine*. To the text of the first edition a sketch of Josephine's life is now added, while, on the other hand, some of the original illustrations have been left out. This work seems to us marred by a good many defects which may be associated with its appearance in a popular periodical. It is not very thorough, and the author has not selected the best materials which

might be brought together to interest casual readers. As examples of an inadequate treatment, we refer to the following passages. It is stated (p. 339) that in August, 1794, when Josephine was released from her imprisonment at Les Carmes, bread was selling at "over twenty francs a pound." The explanation should have been made that this price is given in terms of assignats, and not of bullion, for to many quite a wrong impression would be conveyed. Page 348: "Finally, Bonaparte was obliged to send her, by way of Bologne and Ferrara, to Lucques, a journey that she made in safety, but in tears." Such spelling of proper names makes one doubt whether the word "ultimatim" (p. 169) is really a misprint. On page 401 the form Madame Walewski is used, and on page 412, "Mme. de Walewski." One does not meet with petty inexactness in the pages of careful scholars. Among the unsatisfactory features of the book may also be mentioned a willingness to reprint hackneyed stories which are not quite accurate. Thus (p. 169) we are told that the battle of Austerlitz killed Pitt. Quite apart from the gradual breaking down of his health, it was Mack's surrender at Ulm which gave him what has often been termed his "Austerlitz look." Worse than slight slips, however numerous, is a broad statement like this: "But Napoleon was greater as a man than as a warrior or statesman; greater in that rare and subtile quality which made men love him. Men went down on their knees and wept at sight of him, when he came home from Elba—rough men, whose hearts were untrained, and who loved naturally and spontaneously the thing which was lovable. It was only selfish, warped, abnormal natures, which had been stifled by etiquette and diplomacy and self-interest, who abandoned him. Where nature lived in a heart, Napoleon's sway was absolute." No one can dispute the fact that Napoleon awakened boundless devotion among his soldiers, and among those who saw him from a distance, but such adoration is fully accounted for by the glamour of his genius. What is still more significant is his failure to arouse true loyalty among any large number of his intimate associates—witness the countless desertions. On the whole, the account of Josephine is better than the purely Napoleonic part of the book. It is founded largely on Masson, and observes a more candid attitude towards the famous Creole than one meets with in most English biographies. The illustrations are well chosen, but poorly reproduced.

—In the academic year covered by the latest reports of the German universities, these institutions had a total of 2,266 promotions to the doctor's degree. A theological doctorate is as rare in the Fatherland as it is frequent in America, and is bestowed almost exclusively *honoris causa*. The total for this twelvemonth was only 22, of which the seventeen Protestant faculties bestowed only ten, while the six Catholic faculties gave twelve. The law faculties gave the title to 448 candidates, the Universities of Leipzig and Jena leading, followed by Heidelberg with 119, Erlangen with 115, and Greifswald with 58. It appears that the criticism of Erlangen's former leniency in this regard has been taken to heart. The medical doctorates numbered 758, led by Kiel with 100, while Berlin reported only 44. Though numbering more than two thousand students in its law department, this latter institution created only nine *doctores juris*. Indeed, it is recognized on all hands that the examinations for the doctor's degree in Berlin are more difficult than elsewhere, and it is accordingly no surprise that this university, which in point of attendance has vastly outstripped all the rest, nevertheless bestowed this honor on only 156 persons in all its departments. Leipzig evidently heads the list, although having only 206 "published" doctors. Then comes Heidelberg with a total of 235, Erlangen 225, Munich 171, etc. Of the 2,266 new doctors 141 are foreigners and 4 women. Among the foreigners Russia leads with 35, followed by the United States with 33, England with 21, Japan with 9, and Bulgaria with 8. Candidates from abroad still show a preference for Berlin (31) and Heidelberg (20). Nearly one-half of the degrees were given by the various sections of the philosophical department, and of the more than thousand promotions of this kind Leipzig alone reported 108. It is perhaps noteworthy that the foreign candidates took these degrees chiefly in the department of the "exact" sciences, the Russians showing a preference for medicine and chemistry, the Americans and Englishmen for chemistry, and the Japanese for medicine.

EUGENE SCHUYLER.

Eugene Schuyler: Selected Essays, with a Memoir by Evelyn Schuyler Schaeffer. Scribners. 1901.

Italian Influences. By Eugene Schuyler, Ph.D., LL.D., etc. Scribners. 1901.

Mrs. Schaeffer has performed her task with tact, with taste, and, consequently, with reserve. In her choice of letters and in her story she has sought to give what was representative of the various periods of her brother's life, and not to give more. She has not thought it needful to give the whole truth when the doing so might have revived ancient unpleasantness, and she has made her narrative agreeable reading. The record of a life so exuberant and so varied could scarcely be other than interesting. Mr. Schuyler was the first in America to study Russian and to give us translations from its literature; his literary production, although the occupation of the leisure hours of a busy man, was considerable in quantity and uncommonly diversified as to subject, embracing as it did, besides the translations, general literature, travel, history, and international relations; he was a valuable public servant—and that at a time when he was one of few who understood their business—and still he had left time, energy, and heart to earn the gratitude of future generations by his labors in the cause of suffering humanity. He must always be counted among the makers of an independent Bulgarian State.

Mrs. Schaeffer certainly had an admirable subject ready found for her hand. Indeed, it is so rich that one might reproach Mrs. Schaeffer with not having used it more abundantly; the materials were there, and she had only *un embarras de choix*. It is a good thing to "draw the line," at least for those who otherwise might spend too much time beyond the boundaries; but Mrs. Schaeffer is inclined to sobriety, and might safely have been stimulated to greater expansion. The Russian period, for instance, was that of her brother's diplomatic apprenticeship (where the apprenticeship often consisted in leading his master), as well as that of his first impression of a foreign world, and his letters of the time not only were entertaining, but, more than those of later days, were valuable as a revelation of the man himself. Of the literary interests of this period almost nothing is said, though we can divine something of them in the sketch of Tolstoy, which may be taken as part of the biography, while the Asiatic journey, represented by two or three extracts of letters, and by a page or two of narrative, might surely have been treated at greater length. The letters of that time give the details of seven and a half months that were among the most important of his life. It is not every one who, in default of these, is either able or willing to take the two stout volumes of 'Turkestan' as a supplement. In one sense these months were the climax of his existence. They were not only full of accomplishment, but they were terribly fatiguing—beyond the region of railways he travelled about 8,000 miles "in sledge and tarantass and on horseback"—and it is no wonder that he afterwards felt that he had never quite recovered from that exertion. The abounding vitality that in youth excited the unfailing surprise of his friends, enabling him to turn night into day without diminishing the day as a consequence, never after this journey returned in the same degree. It was the beginning of the end.

The period which has been most adequately treated is that of the Secretaryship at Constantinople. The importance of Mr. Schuyler's efforts in the cause of Bulgarian independence is clearly set forth, and an idea given of his unceasing activity, his high-pressure life, in every post he ever occupied. Even his seasons of rest were busy, *e. g.*, in the spring of 1877, he spent five weeks in Greece (the Memoir mentions only a visit to Athens), where he found time to traverse the Peloponnesus from Nauplia to Kalamata, a journey not so easy in days when there was no Cook's agency to organize the transport. Beyond Megalopolis there was no road except a track for mules and the sure-footed horses of the country. But Bulgaria had made Mr. Schuyler already known as the friend of liberty, and the rude scramble was transformed into a festal progress. Everywhere the members of the little caravan were the guests of the municipal authorities, sometimes of the people, as at Karytena, where their visit to the Acropolis was made in company with a large part of the town, where they descended the mountain escorted by children bearing sheaves of tall white iris, which grows wild on those slopes, and finally with the notables of the place joined in a dance called Pyrrhic, performed with befitting solemnity, and in full belief that it was the ancient thing.

The account of the year and three-quarters passed as Minister at Athens is chiefly devoted to the diversions of his residence there, and justly enough, as the period was one of repose; his diplomatic work went smoothly, his literary work, mainly finishing 'Peter the Great,' was satisfactory, and society was exceptionally agreeable. It need hardly be said that he threw himself into the enjoyments offered with his accustomed ardor. His house was an open one, and the little world of Athens profited abundantly by

his hospitality. No wonder that the memory of it and of the easy gayety of the entertainments of that time should still linger in Athens, and in many a corner of the world to which the participants have drifted in the vagabondage of a diplomatic life.

This happy season was cut short by an act of Congress legislating the legation in Greece out of existence: by a refinement of Congressional tactics, the law, passed July 6, took effect on the first of that month! It is characteristic of Mr. Schuyler that, at considerable inconvenience and at his own expense, he made the journey via Bucharest and Belgrade to present in person his letters of recall, and give as much of an air of decency as was possible to Congressional notions of international comity.

The next important period was that of three years spent at Alassio, the longest of the various encampments of Mr. Schuyler, with the sole exception of that in Russia of eight and a half years, and that was divided between Moscow, Revel, and St. Petersburg. This period was one of active literary production; the various essays in the two volumes before us, with one exception only, were written either at Alassio or during journeys made while living there. They may, therefore, be taken as part of the biography of that time. One of them, "The Lost Plant," was the reproduction of a dream—a dream so vivid and full that the tale was ready-made in all essentials on waking. The reminiscences of Tolstoy form the most important among these papers; they are a first-hand contribution to the biography of the novelist. The essays were nearly all published originally in the *Nation*, and might be subject to the objection frequently made in the columns of the same journal to the republication of such work, were it not that they reveal something of the extent and variety of Mr. Schuyler's culture, and are in more ways than one, as has been said, part of the biography of their period. For instance, the articles on Mme. de Genlis, on Smollett, and that entitled "A Captive Pope," might almost be taken as letters from Alassio, while the fact that Mr. Schuyler was a delegate to the eighth centenary of the Bologna University gave occasion to two papers easily recognizable; and a water-cure that had been prescribed for the same summer, with incidental wanderings, prompted "An Italian Bath," "In the Footsteps of Dante," "Shelley and Byron," "Milton's Leonora," "George Sand in Italy," and "Canova." Of the last three papers it is not necessary to believe that even Mr. Schuyler's phenomenal activity and versatility could really have dispatched the first from Mantua on the 11th of September, the second from Venice on the 12th, and the third from Bassano on the 18th; but the places were all visited and the papers were among the results of the visits.

The most interesting of the "Italian Influences" is probably "The Italy of Hawthorne." Aside from its other qualities, we have been struck in reading it with the style, how clear, direct, urbane it had become. The progress from the days when 'Fathers and Sons' was translated is immense. It is true that translation is a severe test, and writers who elsewhere move freely are here constrained and awkward; but in this paper there is a passage rendered into English from Faguet, and one finds that this has the same easy swing as has its setting. Mr. Schuyler's style was not naturally graceful, but the matter was never wanting, and the better manner came with time and exercise. In the "Reminiscences of Tolstoy" (p. 267), is the line " . . . my translation of 'The Cossacks,' which, I regret to say, was found literal, but dry and matter-of-fact." The quiet manner in which this is related, without comment, shows the intellectual honesty of Mr. Schuyler, as well as a certain strength and modest confidence in himself which are truly admirable. He no more thought of being angry at an unfavorable judgment than at an indifferent fact; the same blunt frankness that he on occasion used toward others, he was ready to accept toward himself.

This love for truth was closely connected with his love for justice, and that passionate desire to redress wrong which, in the course of the Asiatic journey, made him buy a Persian boy in order to prove the clandestine existence of the slave-trade; and in Turkey made him the champion of the Bulgarians. This championship, with the exposure of the misdeeds of Gen. Kaufmann, while Mr. Schuyler was still Secretary at St. Petersburg, have been objected to as undiplomatic. It must be remembered that in Turkey a part of the mission of the civilized Powers is the protection of the Christian subjects from barbarian misrule, and that, as to the exposure of Gen. Kaufmann, the sinner was not Mr. Schuyler, but the State Department at Washington. Indeed, it is his generous defence of suffering humanity which, even more than his diplomatic career, distinguished as that was, or his wide culture and his literary achievements, constitutes his title to be commemorated by this biography.

It is no dispraise of Mrs. Schaeffer's work to wish that her brother had put into effect a notion he more than once mentioned of writing his reminiscences of the many celebrated men and women he had known. Every friend of Mr. Schuyler is aware how rich his life was in material for a performance of that sort. No one better than Mrs. Schaeffer herself knows this, and the only regret we have as to her execution of her pious task is, that she has been so sparing, so scrupulous, so delicate in her choice of what to give. Still, with all her reserve, her brother lives again in her pages. Without any insistence on her part, one is able to recall the intelligence that was unfailingly with the best knowledge and the best thought, that was often of next year's, never of last year's opinion. One recalls the variety of his interests, embracing so large a part of what is knowable, and the alertness of disposition, as well as of intelligence, that made him adapt himself so readily to new surroundings—an invaluable gift to one whose *métier* takes him to-day to Birmingham, to-morrow to Cairo. And, best of all, those whose relations were of affection are reminded of the crystalline frankness, the brightness of spirit, the perennial youthfulness, and the solid trustworthiness which in Eugene Schuyler culminated in what has been called "a genius for friendship." Much of all this must be read between the lines of the memoir, but it is there for him who can read aright, and it marks a man who was worthy of all the honors that he won, and of all the esteem and affection that were his in no small portion.

SOME BIRD BOOKS.

Bird Portraits. By Ernest Seton-Thompson. With descriptive text by Ralph Hoffmann. Boston: Ginn & Co. 1901. 4to.

The Home-Life of Wild Birds: A New Method of Bird Study and Bird Photography. By Francis Hobart Herrick. G. P. Putnam's Sons. 1901. 4to, pp. 148. 141 original illustrations from nature by the author.

Mr. Chupes and Miss Jenny: The Life Story of Two Robins. By Effie Bignell. New York: The Baker & Taylor Co. 12mo.

There is an accuracy of detail, a naturalness of pose and setting, and a sympathy of treatment in Mr. Seton-Thompson's bird drawings that makes them pleasing alike to the critical student of nature and to the lay reader, who may be less able to appreciate their excellences. 'Bird Portraits' is a collection of twenty of this artist's best efforts, with text descriptive of the leading traits and peculiarities of the species represented, which are all common and generally well-known birds. Although the fact is not here stated, the "portraits" have all seen the light of publication before, some having appeared in a well-known juvenile magazine, and others in Stickney and Hoffmann's 'Bird World.' Yet it is a distinct advantage to have them brought together in a single volume, in an enlarged form, on better paper, as befits their worth. Doubtless opinions will vary as to the relative merits of the portraits, but among the most characteristic in pose and setting are the song-sparrow and the kingbird, while the wood thrush, the brown thrush, and the Baltimore oriole fall easily into the first rank. The accompanying text—two pages to each plate—while not ideal in either diction or inspiration, sufficiently well serves its function.

The extent to which the camera is available in recording the habits of birds during the nesting season is well shown in 'The Home-Life of Wild Birds.' The hundred and forty-one half-tone illustrations, from photographs from life, relate to a dozen or more species of our common birds, in some cases no less than a dozen to twenty pictures being given of a single family of birds, as, for instance, of the robin, cedarbird, kingbird, kingfisher, red-winged blackbird, etc., showing the manner of feeding, inspecting, and brooding the young, the sanitary care of the nest, etc. Under ordinary circumstances the task of the bird photographer is one of extreme difficulty, owing to the shyness of the birds, and the necessity of obtaining pictures at close range in order to secure clearness of detail. For this purpose telephoto lenses have been employed, often with good results obtainable in no other way. But this method has its own limitations and difficulties and is practicable only under special conditions. Professor Herrick's new method seems to smooth the way to success, not only in obtaining pictures of wild birds at close range, but in studying birds in respect to their home ways. As he says, wildness is due to fear, and what is needed is "an invisible chain to hold the animals to some given fixed and chosen spot, which may be approached in disguise." The nest with its young, he has found, may be made "the given fixed point, and parental instinct is the invisible chain." His method "consists in first bringing the birds to you and then camping beside them."

This is done by removing the nest from its original position in a tree or elsewhere, and placing it in a favorable position for observation and photography. In the case of a nest in a tree, the leafy branch supporting it is severed and brought to the ground, and then supported by stakes at an elevation of four to six feet, and an "observatory," consisting of a green tent with a small square window at the proper point, through which the nest and its owners can be photographed or studied at arm's length. "By taking such liberties with wild birds, one might suppose we should bring destruction upon their homes and all that they contain, but happily this is not the case. No harm need befall either old or young. The former nesting site is soon forgotten, and the new quickly adopted and defended with all the boldness and persistence of which the birds are capable."

The author is aware of the dangers of his method, and would have it employed only by experts for scientific investigation. To the small boy, ambitious to use his camera, it offers a wide-open door for bird destruction surpassed only by the egg-collecting mania; for, unless proper safeguards are taken, which the expert alone can exercise, the nest will be deserted and the young left to perish. That great success, however, has attended Professor Herrick's efforts his book is sufficient evidence, for never before have we had placed before us in a series of illustrations from life such a revelation of the intimate daily life of various species of birds in the nesting season as is here presented. Not only this, but the observations recorded in the text contain many new details of this life during the season when every energy is bestowed upon the welfare of the unfledged young. His book, therefore, has peculiar interest for all bird-lovers, and a special value for the many at present engaged in bird photography; he freely shares the secrets of his success with his readers, to the extent even of illustrating his apparatus and the methods of his work.

'Mr. Chupes and Miss Jenny,' despite the unsuggestiveness of the main title, is one of the most fascinating bits of popular natural-history writing we have met with in many a day. The sub-title, "The Life-Story of Two Robins," more definitely intimates the subject, but hardly prepares one for the great treat in store for a sympathetic reader. Whether this is due more to the exceptional personality of the two captive robins or to that of the writer, the reader will be left to decide, although we may venture our own opinion that it is the happy combination of bird and author. "Mr. Chupes" is perhaps the star actor of the combination, seeing that his advent on the scene as the victim of a misadventure is the foundation of the superstructure of events here recorded. Mr. Chupes makes his début as a nestling that had fallen from a high tree, thereby receiving serious injuries, which appealed to the sympathy of the author, who became his rescuer, nurse, and friend for the five years of Mr. Chupes's apparently happy life. She says:

"Now before going any further in my recital I want to confess to you that, when I picked up that squawking little bundle of feathers, with body and head nearly equal in their dimensions, legs no support whatever, and wings represented by two helpless quill-covered bones folded against its sides, I had no conception of the magnitude of the task I was imposing on myself in undertaking the rescue. I should probably have hesitated about accepting the charge, or perhaps have declined altogether, had I realized all the care, the anxiety, and the danger to my protégé involved in the responsibility. . . . The possession of pets under such circumstances as I describe means 'eternal vigilance' as far as their natural enemies are concerned, and a constant watchfulness against dangers induced by unnatural conditions."

In this connection it may be well to quote her words on the subject of keeping wild birds in captivity, which has excited, first and last, much warmth of discussion.

"There is," she remarks, "really no excuse for taking a bird from its nest, although nestlings may learn to accommodate themselves to unnatural conditions, and even to be happy with human beings under most favorable circumstances. But a bird that has once tasted the sweets of liberty—unless some accident has maimed him and made him grateful for human aid—can never know anything but heartache in captivity."

Chupes began his career in human society as a "downy, yellow-beaked, big-headed mite" of a helpless baby robin, increased steadily in strength and size as the weeks passed, became full-fledged, but was still a helpless dependent, taking his food from the hand, and not learning to feed himself till many weeks had elapsed. The degree of affection and intelligence developed by the little waif, and displayed under the most diverse conditions, almost surpasses belief, were it not told with so much circumstantiality and evident candor. Chupes was practically given his full liberty, being restrained only for his own safety, mainly from cats, dogs, and other natural enemies. He was taken to the fields and woods, and even on long journeys by train to Canada and other localities remote from his New Jersey home, as the family took its summer wanderings; he made acquaintance, in practical freedom, with members of his own kind, and with birds of other species, and with outdoor surroundings in general, but never showed the slightest disposition to evade the unnatural conditions attendant on captivity. His affection for his benefactress was unlimited, and his greatest grief was an occasional brief separation from her immediate presence.

After a time, a companion for Chupes was sought, and obtained in the personality of "Miss Jenny," a captive, full-grown, sickly, and bedraggled female robin, rescued from neglect in a baker's shop. After a time the two birds became very fond of each other; Jenny survived Chupes by a few weeks, and died apparently from grief. The account of the almost daily life of these two birds for a period of five years forms a rare chapter in the study of bird psychology, and is a distinct contribution to this phase of science. The two birds were as different in temperament and personality as two human beings could possibly be; both were playful, intelligent, and inquisitive in a high degree, affectionate toward each other, and capable of intense affection for their mistress; in many ways their attributes were surprisingly human. Not only is all this pleasingly and intelligently told by Mrs. Bignell, but there are woven in with it many episodes of the fields and woods relating to wild birds and animals, from toads to rabbits, hawks, and cats, all in a way connected with the history of her pets, but in themselves of interest. So simple and skilful is the narrative throughout that there are no dull pauses. The book is dedicated "To the Audubon Societies, in recognition of their work for Bird Protection," and the spirit of it is eminently in harmony with the dedication. It is pervaded with a wholesome, rationally philanthropic spirit, and we hope it will be widely read.

Secrets of the Sword. Translated from the Original French of Baron de Bazancourt by C. F. Clay. With illustrations by F. H. Townsend. London: George Bell & Sons; New York: Macmillan.

The Sword and the Centuries. By Alfred Hutton, F.S.A., late Capt. King's Dragoon Guards. Illustrated. London: Grant Richards; New York: Charles Scribner's Sons.

In an age when war is looked upon no longer as the natural profession of a gentleman, but as merely the last and worst resort of opposing nations, the weapon of hand-to-hand fighting is naturally regarded by the layman as a mere curiosity, fit only for the museum. This sentiment is furthered by the military habit of the American people, which, in even more pronounced fashion than that of our English cousins, has led our army away from the sword to the rifle and revolver. Indeed, there is to-day a school of cavalry in the United States whose curriculum, framed exclusively on Boer bushwhacking and Indian raids, would discard the sword altogether, in spite of records of the effective use of shock action, not only in the Franco-Prussian war and in South Africa, but even in Cuba, as practised by Maceo and his machete-men. The side-arms prescribed for the officer of the United States army offer small encouragement to swordsmanship. They are as useless as they are tasteless. The tawdry gilding, the slender, brittle blades compare but poorly with the strong, simple Toledos of our late Spanish adversaries. The sabre of the American cavalry or artillery officer, light and unfitted for the thrust as it is, might perhaps deliver an effective if not a "swashing" blow; but the sword of the infantry officer—neither estoc, rapier, broadsword, colchimarde, nor smallsword—is perhaps the most trivial impertinence that ever masqueraded under the name of the "white weapon."

Fencing has always been exotic in America as it is in England, yet there is no sport in the world that more thoroughly sets up eye, hand, wrist, arm, shoulders, waist, legs, and feet—and manners—than that art (to quote M. Paul Bourget),

"Qui joint la force habile au courage courtois."

Mr. Clay's translation of the delightful chats of Monsieur de Bazancourt is not a mere manual of fencing. It will not supplant the admirable English work by Messrs. Pollock and Grove in the Badminton Library, or the American "Grammar of Fencing," as Mr. Rondelle describes his book, 'Foil and Sabre.' The Baron apparently called his book 'The Secrets of the Sword' for the purpose of surprising his readers with the fact that the sword really has no secrets for those who seek to know and love the weapon. His treatise is a justification of the existence and persistence of swordsmanship, and of the value, mental, physical, and moral, of the art. He treats not so much of the plank in the *salle d'armes* as of the actual assault. He suggests and deprecates in turn methods of offence and defence. The purist who for years has been taught to disregard every portion of his anatomy but the spot covered

by the small red heart still sewed on "boughten" plastrons, will not be interested in what the genial Baron has to say; but the fencer who regards the assault as really a mimic duel, and seeks to learn self-defence as well as mere sword-play, will delight in sound suggestions providing a defence for every part of the body. Prevost and the rest tell us what to do. De Bazancourt tells us why to do it.

This most readable commentary on swordsmanship is fortunately issued in the same hour with the most notable book on the history of the sword that has been given us in two decades. Captain Hutton, artist and soldier, has at last published just the book for which we have all been waiting since Mr. Egerton Castle issued his delightful treatise on 'Schools and Masters of Defence,' and the young officers of the London Rifle Brigade studied and exhibited the various old-time methods of fighting, even of fighting with the ancient claymore. (The claymore, by the way, really is not the weapon to which the name is commonly applied. The Gaelic word literally means "big sword," and was originally given to the big two-handed sword of the type used by Wallace. The basket-hilted broadsword was not introduced into Scotland till centuries afterward.)

It is a curious commentary on these days when all the world seeks for peace, that modern literature—or at least modern fiction—should treat so largely of battle, murder, and sudden death. Capt. Hutton's most interesting volume is a wonderful collation of accounts of historical duels and combats with the sword and kindred weapons, from a combat with pike and estoc in the days of Philip the Good of Burgundy, to single-stick at Angelo's in the days of Victoria, also called the Good, but perhaps with better reason. The book is a perfect mine of material for those who follow in the path of Mr. Crockett, Mr. Levett-Yeats, Mr. Weyman, Dr. Doyle, and even of Dumas and dear old Sir Walter himself. Each page is a romance, but a romance of reality.

Never did two books more completely supplement each other than Mr. Castle's 'History of Fencing' and Capt Hutton's 'History of the Sword.' They are, possibly with intention, as inseparable as blade and hilt or thrust and parry. One friend provides the play, the other the actors. The theory of the first is made clear by the illustrations of the second. Mr. Castle gives us a short biography of the renowned Figg, with a sketch of the man and his weapons. Capt. Hutton reproduces the metrical account of the famous "battle" between Figg and his rival Sutton. Mr. Castle tells us the methods of the school of Marozzo, Agrippa, Grassi, Vigiani, and their successors, Fabris and Capo Ferro. Capt. Hutton supplies us with the famous rapier and dagger duel of the Mignons of Henri III. and with some of the wonderful achievements in that line of James Crichton, sometimes called the Admirable Crichton.

It is a tale of paradoxes, that of the sword. Last and best of all the weapons invented by man for hand-to-hand fighting (for the bayonet is but a modification of the spear), it achieved its highest development only after the invention of firearms, which were so largely to preclude its use. The sole weapon, except its country cousins the cudgel and quarter-staff, equally applicable to offence and defence, it has in all ages been the badge of rank. Yet, before gunpowder had deprived the knight of his plate armor and forced him to parry as well as to strike and thrust, the unarmored sword and buckler man was of necessity more skilful in sword play than his mail-clad feudal lord. The broadsword, invented for the guards of a Venetian Doge, has become the national weapon of the Scottish Highlander. The long, straight blades with the cross-hilts that followed Richard the Lion-hearted to battle against Saladin, Sultan of Egypt, are brandished aloft to-day in Egypt not by Crusaders, but by the descendants of their enemies, by the Sudanese Arabs, mad for the destruction of Christians, the emblem of whose faith these Moslem fanatics unconsciously bear with them to battle. The yataghan of the Slavic Christian became the weapon of massacre of the Bashi-Bazuk only to return in vengeance upon European rifles as the sabre bayonet. One rule, however, has been seldom broken: whether the fighters were Roman and Gaul, Frank and Moor, or Swede and Pole, the straight sword has ever prevailed over the curved, the broadsword over the sabre, the point over the edge.

The days of the duel are happily passed, the days of war, we may hope, are passing; yet, if we agree that the weapon essentially that of the man of honor and the soldier has nearly played out its part in history, we can agree also with the amiable Baron that it is folly to abandon perhaps the most perfect method of exercise ever devised. Whatever our opinions may be as to the value of the sword, we must needs be grateful to the English master of fence who has given us no mere theoretical treatise, but a most valuable history of the actual encounters of swordsmen in five centuries of fencing, when the hand did indeed keep the land and the sword was still more honored than the purse.

Burma. By Max and Bertha Ferras. E. P. Dutton & Co. Pp. 237.

Burma is the land of "ivory, apes, and peacocks," but not so much so as the countries, Siam and India, between which it stands. It is a land of roughly parallel mountains, running north and south, with the valleys of the Salaween, Paunglaung, and Irrawadi Rivers. Burma has somewhat over 211,430 square miles of area, or, more exactly, 135,315,200 acres, though the area cropped in 1893 was but 8,435,000 acres. The boundaries include the Shan States, wherein dwell a most interesting people. The word Siam is believed to be in its origin only a French spelling of Shan. Looking at the country of Burma, in the beautiful clear map in this volume, we see jade, amber, and ruby mines in the north, abundance of fertile valleys, in which almost anything can grow, and, everywhere except in the dry belt, evergreen forests teeming with varied animal life. A trunk line of railway runs nearly the whole length of the mainland north and south, or from Rangoon into the mining regions. To Burma belongs one-half of the Malay peninsula. Of the population of nearly 8,000,000, over 6,000,000 are Burmese. Then, in order of numbers, come the Karens, natives of India; Shans, Chins, Chinese, Europeans, and Eurasians. The population since 1881 has increased over twenty-two per cent.

Glancing at Burmese history, from the point at which begins the legendary story of the Burman kingdom, founded B. C. 1000 by a king of the same clan (Sakya) as the Buddha, we have, for nearly fifteen hundred years, the story of the people told in the spread of Buddhism. Then come struggles between the Burmans and their invaders, from China, Shan-land, and India. In the fifteenth century we note contact with the Europeans, numerous civil wars, and the interference of Italians and Portuguese. For two hundred years the Portuguese adventurers figure actively. Great Britain, represented at first by adventurers, invited settlers and sailors, appears early in the seventeenth century. There are also wars with China and Siam, which latter country the Burmans conquer more than once. The first wars with Great Britain begin early in this century, and after two or three campaigns Burma becomes a British province. In 1884 the native government is overthrown, the king deported, and the country incorporated in the Indian Empire.

Despite local outbursts of resistance and a general revival of brigandage, which has been gradually suppressed, the country is well governed. It is now ruled by a chief commissioner, with eight deputies over as many districts, and all under the viceroy of India. In place of the twenty thousand troops formerly required, there are now but four thousand European and ten thousand Indian soldiers. The police are officered by Indian and Burman leaders. The revenue is provided chiefly from the teak forests, a capitation tax, and a land tax on the rice lands which varies according to their fertility. The gross revenue of Burma in 1894 was sixty million rupees, of which Pegu, the most southerly province, containing Rangoon and monopolizing the foreign commerce, contributed nearly fifty millions. In the same year a million and a half tons of rice, worth in Europe about $50,000,000, and two hundred thousand tons of teak timber, worth $70,000,000, were exported. The development of foreign trade and commerce has been magnificent.

Shut up between the mountain waste and the ocean in a secluded coign of the earth, the Burmese, as pictured by our authors, show a distinct type of body, of mind, of civilization. During most of their history they have dwelt in isolation, and by what took place among themselves in war and trade they were affected but very little. Shut off from China by the mountains, while the ocean was no highway under conditions of ancient life, the Burman has developed his character in independence, and of this there is still left much of freshness and charm. The spiritual influences moulding him have come through Buddhism, whose inspiration is not racial but human. To-day the Burmans are the practical Buddhists of the world. The abounding treasures of Buddhist legend have furnished subjects which have exercised the Burman's poetic fancy. With plenty of ruins on his soil, and the exercise, among his forefathers, of the elemental passions of man in war, in statecraft, and in love, there is a rich field for dramatic treatment, which the Burman has not been slow to utilize. He is especially clever with marionettes. In the chapter on pageants and frolics, we see the Burman in his hours of recreation, both indoors and outdoors, and find him as fond of amusements as his fellow-mortals in other parts of the world. The final chapter,

treating of age and mortality, pictures the afternoon of life in a country that has ceased to be numbered among the hermit nations.

The volume before us is a sumptuous one, superbly printed, richly stamped in gold, and replete with over four hundred excellent reproductions of photographs, many of them full-page, and all showing great skill and taste. The chapters, written in a very attractive style, deal with almost every phase of Burmese life and civilization. There are copious appendices and a very good map. Besides paying much sympathetic attention to native art, literature, and the drama, the authors have furnished five pages of specimens of Burmese music, so that we have here a work both cyclopædic and readable.

Pintoricchio. By Evelyn March Phillipps. (The Great Masters in Painting and Sculpture.) London: George Bell & Sons; New York: Macmillan.

A mediocre painter and draughtsman, a maker of poor and confused compositions, a decorator who was a master of ornament and delighted in bright colors and embossed gold—such was Pintoricchio, and a book devoted to him would possess no absorbing interest were it not for the still vexed question of his relations to a real "great master," the young Raphael. Who made the drawings in the so-called Venice Sketchbook? How much had Raphael to do with the designing of the frescoes in the Siena library? These are the two questions the discussion of which in the present volume is really interesting.

Probably the balance of authority is to-day on the side of the attribution of most of the drawings in the Venice Sketchbook to Pintoricchio; yet Henry Strachey, the author of the 'Raphael' in this same series, is able to maintain the traditional ascription to Raphael, and to quote Crowe and Cavalcaselle in its support. It is admitted that the sketchbook contains studies for or of frescoes painted while Raphael was an infant; but "Crowe and Cavalcaselle justly point out that these labored and tentative drawings cannot be the original studies of an accomplished master"; and it is contended that they are copies made later from the cartoons in Perugino's shop, and are the school exercises of Raphael. One might argue that there is no proof that Pintoricchio ever was an "accomplished master" in the sense of having been able to draw better than these sketches, but at the time they were made, if he made them, he was himself an almost unknown man, an assistant of Perugino, as Raphael was later, But the crucial argument may be given in the words of the present volume. Among the drawings are two for the St. John in Perugino's "Giving of the Keys." "One of the two is ruled in squares for transferring to the wall, and this is the one adopted by Perugino." These lines for "squaring up," as the painters say, entirely dispose of the "school copy" theory, and leave only Perugino himself and Pintoricchio as possible claimants of the drawings; and as many of these are for independent works of Pintoricchio's, in which Perugino had no part, it seems proved that the younger artist is their author, and that the assistant occasionally supplied studies for his master.

When Pintoricchio had become an esteemed and independent master, did he, in his turn, accept even greater aid from the young genius who had become his assistant, and adopt whole compositions from the sketches of Raphael? Here authority seems almost all on one side. "Morelli casts scorn on the supposition; Crowe and Cavalcaselle stand aghast, and declare that, believing it, the life of Raphael would have to be rewritten. Bode says it is audacious to contend that the great master and *entrepreneur* would adopt the designs of a young, untried painter." On the other side there seems only Dr. Schmarsow to quote, but our author does not shrink from the "audacity" of declaring him to be right, even if the rewriting of the life of Raphael has to be set about at once. It is needless to follow the argument in detail, or to discuss the question of the handwriting on some of the sketches. In one instance, we have here the drawing itself reproduced over against the reproduction of the completed fresco; and in this case, at least, the drawing itself is the best argument. The fresco is the first of the series, and represents Æneas Sylvius Piccolomini on his way to the council at Basel. The drawing is stated in the text to be in Florence, but under the plate itself and in the list of illustrations it is said to be in Venice. At any rate, here the drawing is, and a comparison of the two plates shows certain things beyond doubt.

First, the two are the same composition; second, the drawing is the original, as shown by the squares for enlargement; third, there have been considerable changes in the fresco, and it is the changed parts that are particularly characteristic of Pintoricchio; fourth, the drawing is infinitely finer than the completed work, and by an artist of far greater power and knowledge than Pintoricchio ever attained to; finally, by every mark of style in the drawing of men and horses, that artist was Raphael or the devil.

That Raphael worked in Siena as Pintoricchio's assistant, we know from Vasari's statement, and that he was much influenced, for a time, by that master his "Disputa" bears witness; but the singular position, revealed to us by this drawing, of an assistant of twenty who was allowed to make the original sketches for important compositions by his renowned master of fifty, is almost incredible. Pintoricchio was bound by the terms of his contract "to draw all the designs with his own hand, both in cartoon and on the wall"; but if his employment of Raphael was hardly in strict accord with this contract, he must have felt that it was for the advantage of the work. He spoiled the composition with his alterations, but it is still much finer than anything of his own.

Cricket and Golf. By Hon. R. H. Lyttleton. London: Dent; New York: Macmillan. 1901.

The Woman's Book of Sports. By J. Parmly Paret. D. Appleton & Co. 1901.

In view of the extraordinary output of books on games in recent years, Mr. Lyttleton feels called upon to explain the *raison d'être* of his volume in the "Haddon Hall Library." He states that it is neither didactic nor reminiscent, as these sides of the subject have been fully covered already, but that he has endeavored to occupy an untechnical standpoint and to display therefrom the charms and shortcomings of both games. Of cricket, in its present stage of development, he is evidently more impressed by the shortcomings than by the charms; and this opinion is gaining ground in England in spite of insular conservatism, which is nowhere more in evidence than among the cricket-playing part of the community. In the last twenty years improvements in heavy rollers have made the cricket-grounds so true that all bowling is easy, and long scores have become wearisomely common. The result is that a majority of the important matches cannot be finished in three days, and drawn games do not please the gallery and are seriously injuring the popularity of the game. Many remedies have been suggested, and the most available, according to Mr. Lyttleton, are an increase in the size of the wickets or a decrease in the size of the bat, or both of these changes combined.

In regard to golf, Mr. Lyttleton seems to consider one of its greatest charms to be the fact that it can be played at almost any age. In order to prevent a dangerous spread of golfing enthusiasm among the inmates of Homes for the Aged, this statement should be qualified by a "rider" to the effect that no one can play *good* golf who does not begin the game in boyhood, and that poor golf is hardly worth playing. On the other hand, he considers the undue importance of "putting" one of the shortcomings of the game, and in this opinion most golfers will concur. Admitting that skill is required for successful putting, it is a pettifogging kind of skill as compared with that required for driving and approaching, and yet it counts for much more in the final result.

The remarkable development of out-of-door sports among young women in recent years is sufficient justification for Mr. Paret's attractive little volume, "illuminated by the author's own candles" in the shape of photographic reproductions, which cannot fail to assist the beginner to an accurate comprehension of the text. Mr. Paret gives sound and sensible advice in regard to golf, lawn tennis, sailing, swimming, bicycling, and basketball, and, while he has nothing strikingly new to say on these subjects, we are glad to notice that he frequently sounds a warning note against the excessive ardor with which young women are wont to engage in these and other pastimes. Particularly timely is such a note in these days of competitive sports and record-breaking feats at women's colleges; for, in spite of Greek precedent, the weight of evidence in these cases is decidedly on the side of injury rather than benefit to the ambitious competitors.

Sanity of Mind. By David F. Lincoln, M.D. G. P. Putnam's Sons.

The latest student in the field of mental aberration approaches it from a new direction. His essay is a happy exception, especially for the general reader, to the usual discussion of how the health of the mind is lost and how it may be recovered; for it pays less attention to remedying than to preventing such mischief. And, in traversing the subject, the author opposes some of the pessimistic views that have long been in the ascendant. He frankly treats mind and body as interdependent as well as coexistent, and believes that, where there are not marked anatomical changes, as in senile dementia, the pulsation in the nervous functions depends upon the fuel supplied to the engine of the mind. He suggests that, in a broad sense, "malnutrition of nerve-tissue lies at the basis of all mental dis-

order." Nevertheless, the refinement with which he follows this up, viz., that heredity is not logically a cause, but a channel, appears scholastic rather than practical. Taking his accepted premise from Clouston, that "heredity is best understood as continuity of cell life," we may certainly find the cells of the second generation so permeated with the abnormal stain that they show a color which is the sign of evil—is evil itself, so far as that victim is concerned. A race-horse wins because he has been endowed by his progenitors with certain physical qualities, or he is beaten because he has not been thus endowed, and the agency of a jockey is not the cause, but a condition, of victory or of defeat. The training of a racer is necessary, but indefinite training will not make an Atalanta from a field hand. This much is admitted in the statement that "In such a sense [as a legacy from drunken parents] inheritance is a cause of many cases of insanity."

With whatever phrases it may be surrounded, it is a matter of every-day knowledge that some idiots are such because the primordial cells were degenerated, and that some minds give way because there simply is not the strength to endure the mere exercise of normal life. "A" becomes a consumptive because of his inherited inability to withstand the first tubercle bacillus that invades his body. "B" withstands a thousand such bacilli through his constitutional vigor. The invading bacillus is quite as much an occasion as a cause. We say a spark is the cause of an explosion. It is not: it is the occasion. The cause is the gunpowder, the chemical qualities of the associated ingredients. Very few figures of speech are complete, and all this is playing with words. The truth is, that heredity is an influence of variable power, and the very fact that it may incline the scale in one direction implies that its tendency may be successfully antagonized. It is on this that Dr. Lincoln rests and builds. He does not commit the error of supposing that a craving for drink, for example, is necessarily the fruit of ancestral drinking, but recognizes a correlation of maladies as well as of natural forces. Epilepsy, chorea, hysteria, dipsomania, paralysis, and fifty other evils are interchangeable, if not in the first generation, at least in the second. He goes further, and looks upon the constitutional tendencies to tuberculosis, rheumatism, and gout as liable to be replaced by neurotic disease sooner or later. But with such an admission there is direct repudiation of the doctrine of degeneracy as a cause of crime, in the assertion that "most of our criminals are made rather than born, made by neglect and bad example." If that is true, the converse is true, that favorable environment will develop the good rather than the bad qualities, and that a beneficent education, a leading out, of the good qualities, however rudimentary, that every one may be supposed to possess, will purify the body, cultivate the morals, strengthen the mind.

Resting upon that proposition, the book is most healthful, instructive, and encouraging. As one familiar with children and schools, Dr. Lincoln's chapters upon education and self-education deserve to be reprinted as tracts for study in our normal schools and universities. There is an enthusiastic contention that sanity of mind may to a large extent be preserved and crime be greatly decreased by intelligent and persistent action through the state. We think this view too sanguine, although it is better to be too sanguine than pessimistic. For there *are* degenerates; voluntary evil will descend to the third and fourth generation; our asylums for the mind can be abandoned no sooner than those for the body; and the wicked, like the poor, we shall have with us always. But because there is an ocean is the very reason that dykes should be built, and the harder and more intelligently we work, the better prospect there will be of redemption.

The volume is small, untechnical, and clear. Dr. Lincoln does not write as one delivering an esoteric address to a guild, but as a prophet with a mission to the common people. He should be heard gladly. There is one curious lapse in the make-up of the book. On page 71 Miss Catherine Beecher is made to say "that she does not know ten women who enjoy good health," but the footnote that quotes her textually, limits these invalids to married American women born within certain years; and this is confirmed by reference to the original. The moral here seems to be that Miss Beecher's "thousands of acquaintances" talked too much about themselves.

J. M. Barrie and his Books. By J. A. Hammerton. London: Horace Marshall & Son; New York: M. F. Mansfield & Co.

The author of the articles collected in a volume bearing the above title takes precautions against censure by preparatory intimation that he has attempted neither formal biography nor comprehensive critical survey, and that he began and ended his work with no more ambitious purpose than to gratify requests made to him for "biographical and bibliographical data concerning Mr. Barrie." As a means of satisfying such importunate curiosity, the book is all that can be desired. From the description of Mr. Barrie's appearance it may be inferred that his photographs resemble him closely; and from details about his temperament and character, that he is unmistakably Scotch. What he has besides his Scotchness is the artistic temperament. Mr. Hammerton is so sure about this extra endowment that he says positively, "Thomas Sandys is first and last a study of the artistic temperament, and as such I am persuaded he is a study of Barrie's inner self." Slight incidents and details of Mr. Barrie's home life confirm the account given in his sketch of his mother, Margaret Ogilvy, a sketch whose merit is thought by Mr. Hammerton to make ample excuse for what at first sight appears questionable taste. Having considered both the man and his books, Mr. Hammerton draws one conclusion which exonerates him from any charge of adulation. He quotes a remark made about Henry Drummond, the author of 'Natural Law,' to the effect that as a man he was greater than his books, and then goes on: "But of Barrie I do not think this can be said; indeed, if it be not a paradox, Barrie the man, with all his conspicuous qualities, is rather less than his books—his greatest books, I mean."

The volume is supplied with many extracts from Mr. Barrie's works, with opinions by distinguished contemporaries, with a glossary of Scotch words and phrases, and with a bibliography of seven pages. Nothing that makes for completeness has been forgotten, and there is only one serious defect, which is, that in a world where there is so much to learn, those who read Mr. Hammerton's book may feel themselves so well informed on his subject that Mr. Barrie's own works, uncut upon the shelves, may long await "the more convenient season."

A Book of Remembrance. By Mrs. E. D. Gillespie. J. B. Lippincott Co. 1901.

A great-grandchild of Benjamin Franklin, who had William Duane and Richard Bache for grandfathers, and whose father left the Secretaryship of the Treasury rather than obey Jackson in removing the United States deposits, should have matter of recollection for public use—except that the Franklin field has been pretty well gleaned before now. Of the "ready wit" of her grandmother, Sarah Franklin Bache, Mrs. Gillespie offers two traditional specimens: "There is no rank in this country but rank mutton"; and, apropos of the consecration of the first Episcopal Bishop of Pennsylvania, and in answer to the question, "What has William White gone to England for?" "Yeast." (Should this somewhat subtle jest need explication, be it remembered that yeast causes rising.) The Quaker butterman of Mrs. Gillespie's childhood did better than this, and without frivolous intent. Asked as to his daughter's marriage, he replied, "I do not know. She came home on Fourth Day, bringing with her a man, and they have remained ever since with us. He is in a pyanno-forte factory, but I am glad to tell thee he does not make the carnal parts." Among the papers of her father, who was long the friend and adviser of Stephen Girard, Mrs. Gillespie lately found records of the coal-lands which are now an important part of the Girard estate. Those first bought, cost from three to six cents an acre. Not more profitable was Mr. Duane's sale of the site of Peoria for $600, when the town was springing up on it. Wages in Philadelphia were low in the thirties; a cook received $1.50 to $1.75 weekly, a waitress $1.25, a man-servant $12 to $15 per month. But the queerest of these recollections is that of President Harrison's hands, in 1841, as "he made a tour of the hall, so that we might all see" him, at the Inaugural Ball. "He wore a pair of white silk gloves with log cabins embroidered on the backs. The fingers of the gloves were twice the length of his own fingers, and hung limp and useless as he walked with his hands in front of him."

Perhaps the century lost flavor as it progressed, for Mrs. Gillespie's later jottings present little that is notable. Most of her 393 pages are filled with her experiences abroad in 1868-71 and 1877-81, or in the interval as President of the Women's Centennial Executive Committee. In 1868 she found Parisian shopkeepers insulting when she did not buy, and the city unattractive. In Italy Antonelli's face was "like a dried lemon," and bore signs of war between flesh and spirit. In Germany she heard of one who had "bought an island in one of the rivers of Florida, but found it so full of rattlesnakes that he has returned to Switzerland for hands and chemicals to destroy the snakes before he begins to plant." In 1874 occurred an incident which recalled

the remote past. Mrs. Gillespie was in the Capitol at Washington with her friend the granddaughter of Chief Justice Taney, who had displaced Mr. Duane as Secretary of the Treasury; when Judge Jeremiah Black told them the millennium was at hand, since the lion and the lamb had come together. At the opening of the Centennial Exhibition she, in haste and with great difficulty (the crowd being dense), ordered a carriage for the Empress of Brazil; but Mrs. Grant supposed it was for herself, and the Empress had to walk through the mud. At the dedication of the Chicago buildings in the fall of 1892, our author, who attended as representative of Pennsylvania, was hailed by a small boy with, "Say, was you here when it was discovered?" In 1891 she was one of the "National Society of Colonial Dames" that had a difference with the New York society.

Those who like promiscuous reminiscences will doubtless find their account in this collection; but the Sanitary Fair verses of 1864, with some others and much of the prose, might have been omitted without public loss. The volume is embellished with portraits of the writer in Quaker dress, 1864, in Martha Washington costume, 1873, and in every-day guise of later years; but it has neither index, table of contents, nor chapter-headings.

The Seabeach at Ebbtide: A Guide to the Study of the Seaweeds and the Lower Animal Life Found between Tidemarks. By Augusta Foote Arnold. The Century Co. 1901. Pp. viii, 490. 8vo. Ills.

The preface states:

"This volume is designed to be an aid to the amateur collector and student of the organisms, both animal and vegetable, which are found upon North American beaches. . . . The attempt has been made to designate the classes and orders with sufficient clearness to enable the collector to identify the objects commonly found on the shore, and to follow the subject further, if he so desires, in technical books. It is hoped that the book will suggest a new interest and pleasure to many, that it will encourage the pastime of collecting and classifying, and that it will serve as a practical guide to a better acquaintance with this branch of natural history, without necessitating serious study."

It is undeniable that we are much in need of small manuals which shall be guides to the seaside visitor in his wish to learn something of the life on the shores, and so add to the interest and profit to be derived from summer outings by the sea or winter visits to Florida or California. This is especially desirable for young people, who often lose precious opportunities from sheer ignorance and the absence of any suitable book or teacher. In England and France many such booklets have been prepared, often with excellent illustrations, by competent naturalists, from P. H. Gosse to writers of the new century. A beginning has been made in this country; birds, ferns, and flowering plants, mammals, and, in a less popular way, fishes, land snails, reptiles, and batrachia, have been more or less efficiently provided for, either by private enterprise or the manuals issued by the National Museum at Washington.

Such needs may be met in different ways. The most immediately useful are those manuals which take a limited group of animals belonging to a specified faunal region, and fully illustrate the differential characters of the larger groups as well as the species most commonly met with. As the student aimed at always begins with individual specimens, and works back to the characters of larger groups, it is essential that these points should be kept in view. We may also conceive of a series of manuals which should have for a guiding principle the comparison of faunal regions, either local, such as those of the sands, rocks, mudflats, intertidal, low-water, and submarine zones of a single region; or which should summarize the characteristics of beaches in, say, Florida, Southern California, and the New England coast, with a local synopsis in each case. This would open the eyes of the student to the problems of distribution and environment, and lead toward investigations of absorbing interest.

The present work does neither. To attempt to guide the student to all the beaches of the continent and the prominent characteristics of all their inhabitants, animal and vegetable, commonly met with, "without necessitating serious study," is a task from which the best qualified might shrink, which no one person is well fitted to perform, and which, if practicable at all in the present state of our knowledge, would require a volume of portentous size. Mrs. Arnold seems to have unlimited faith, a fairly good acquaintance with the technical names required, an unobjectionable literary style, and great industry. Her book contains many fine borrowed illustrations, and a number, not so good, of original "process" cuts from photographs. As a piece of compilation it is not without merit, and it will doubtless have a certain usefulness. It would be unkind to apply to it the technical criticism suitable for works of science, but we cannot refrain from pointing out that the pyriform bulb of the *Nereocystis*, or "bullhead kelp," on which the sea-otter is supposed to "make its home" (p. 35), is about seven inches (not seven feet) in diameter.

The work is attractively printed, as one would expect from the Century Company, and has a good index.

John Marshall. By James Bradley Thayer. Houghton, Mifflin & Co. 1901.

The materials available for a biography of Marshall are scanty, and Professor Thayer shows good judgment in declining to resort to padding. He presents a sketch of the man, set against the background of his time, sufficient to give us the sense of personality; but there is no attempt to fill in the gaps in the records with conjectural matter. The result is a brief, compact, impressive memoir, which can be read in an evening, and will be remembered because it does not overtask the memory. In neatness of style and in sense of proportion Professor Thayer meets the most exacting requirements; he says just what is necessary, and he says it just as it should be said.

The fact is, that Marshall's relations to the Constitution are of such transcendent importance as to make the rest insignificant. Were it not for this unique distinction, we might be interested in the record of his ordinary doings, as in those of any of the forefathers. But his name has come to connote the Supreme Court and its most important decisions, and at this distance from his corporeal activity we can hardly think of him except as an influence in Constitutional development. Nearly half of this monograph is therefore given up to a review of Marshall's most noted opinions, and their bearing on our political system. It is of peculiar interest, because Professor Thayer is no hero-worshipper, and indulges in no undiscriminating laudation. Indeed, it is quite plain that he dislikes much of Marshall's doctrine, and would probably have decided his most important cases differently had he sat in Marshall's seat.

Thus, Marshall emphatically asserted the doctrine that the Legislature is bound to legislate in accordance with the written Constitution, and that it is the duty of the courts to decide whether they do so legislate. Professor Thayer points out that in no country in Europe does this doctrine prevail, and that it was far from being generally accepted here before Marshall's decisions. He observes many inconveniences in subordinating legislatures to courts, and thinks that inferior men are chosen legislators because the people feel that the judges will correct their errors, and that legislators feel less responsibility for their action on this account. We cannot argue the matter, but it is certainly going rather far afield for an explanation, to suggest that the people choose bad men for legislators because they choose good ones for judges. Nor can we share the belief that the toleration of unconstitutional laws by the courts is wholesome because it occasions "vigorous thinking." When the people have adopted a Bill of Rights, they will no doubt think, and perhaps act, vigorously, if their rulers disregard it; but why should we have any bills of rights at all if they do not permanently remove some questions from the reach of agitators? The Dartmouth College decision, again, meets with Professor Thayer's disapprobation, for the somewhat inconsistent reason that it is not safe to allow legislatures to make contracts of enduring obligation. But, as we have observed, Professor Thayer's own convictions do not prevent him from correctly describing those of Marshall, while they make his criticisms more interesting.

Le Vocabulaire Philosophique. Par Edmond Goblot, Chargé de Cours à l'Université de Caen. Paris: Armand Colin & Cie. 1901. 12mo, pp. 489.

Many dictionaries of philosophy have appeared since that of Goclenius was published in 1613. None have been thoroughly good, and none that we have seen have been by any means worthless. The best, hitherto, has been that of Franck, in six volumes, executed upon the coöperative plan, the first publication of which began in 1844. There have, again, been some philosophical dictionaries of limited scope, which perform all that they promise quite to perfection. Such are the 'Index Aristotelicus' of Bonitz, and the index to the old Rome edition of Thomas Aquinas. For a very small book, Schmid's Kantian 'Wörterbuch' can hardly be improved. Another class of philosophical dictionaries is marked chiefly by ignorance and bad judgment, and yet, though most of the labor expended in preparing them has been misapplied, still there has been so much of it that they often prove extremely serviceable. Among dictionaries which are extremely useful, provided one is continually on his guard against their treacherous errors, may be mentioned that of Eisler, published two years ago, which has a text of half a

million words. This book, which consists almost wholly of quotations, assumes that the reader reads currently Greek, Latin, Italian, and French, as well as German, but not English.

Every student of philosophy has probably, on some occasion or other, found even so slender a work as that of Fleming convenient. The French volume before us for review is somewhat on the same scale, though not upon the same plan. Since accurate and systematic thinking constitutes pretty much the whole substance of philosophy, it follows that, to read philosophy, it is necessary to have the most precise knowledge of the meanings of its technical terms; and no matter what the student's natural aptitude may be, extensive reading is more indispensable to any degree of competence to consider any question of ultimate good, of right reasoning, or of the general character of the universe, which are the subjects of philosophy, than it is in any other branch of science —unless, perhaps, we should except history and politics. Now the terminology of French philosophy is quite peculiar. Very few French writers distinguish sharply between the essence of a philosophical term and other ideas that are closely associated with it; and those associations are often quite different from our own. For this reason, an English-speaking reader has to make a separate study of the language of French philosophers. The French have now reached that stage of philosophical development in which the ideas of Kant occupy them somewhat largely, though at the time when philosophy flourished in France under Louis Philippe, the name of Kant did not appear in French books, unless now and then for decorative purposes. This makes a new vocabulary adapted to the present state of ideas very welcome to us. It should tell us much about the present state of philosophy in France. Besides the Kantian terms, we find here terms of physiological psychology cutting a great figure. That that science is no part of philosophy is rightly insisted upon by the psychologists themselves. Indeed, at the time James's classic appeared —only a decade back, but it seems an age— the disposition among them was to cut the acquaintance of the metaphysicians altogether. It was just as well to include these terms, for philosophers like to allude to psychology; but of the present volume those words are quite the characteristic feature, and no French writer later than Maine de Biran is so often referred to here as *Pierre* Janet. Political and social philosophy is almost entirely neglected. Ethics and modern metaphysics are equally so. Renouvier is but very slightly referred to in two articles. Modern logic is hardly at all represented. But then we must remember that the volume is small, and anything like a good all-round representation of French philosophy could not be expected. Many of the statements are monstrously inaccurate, but whether or not the work is on that account less typical of the French student of philosophy of to-day, which is the point of view from which an American would value it, we are not prepared positively to say. In short, the book is one of which some use may be made, but it is hardly worthy of so eminently respectable a publishing-house as that which issues it.

Harrow. By J. Fischer Williams. Macmillan. 1901.

The reputation of the excellent series of Handbooks to the great English Public Schools is well maintained by this volume on Harrow. It is possibly in consequence of a suggestion more than once made in these columns that Mr. Williams begins by an attempt to explain what "Public School" means. This is a difficult business; and we can hardly say that Mr. Williams has been altogether successful. He gives an account which those who know something about the schools in question will recognize to be true, but which does not make their differentiating characteristics stand out with any distinctness. But he manages to make some interesting comments by the way. He observes, for instance, that in such schools "for the majority of boys the training of character rather than direct teaching is aimed at," and that "the majority of boys cannot there be taught to the full extent of their capacity for absorbing information." Would he weaken or strengthen the case for the Public Schools if he remembered that there is something in education besides "the training of character" and "the absorption of information"—at any rate as "character" is usually understood?

Harrow School ought to be particularly interesting to Americans as a Whig foundation, where the Headmaster, Sumner, in the days of George III., did not conceal his sympathy with the American colonists, and where Rufus King placed his own son. To lovers of hearty and wholesome schoolboy life, it makes a nearer appeal as the source of some of the very best of school songs. Mr. Williams does no more than justice to Mr. John Farmer, the music-master and composer, whom Jowett at last induced to leave Harrow for Balliol. "Perhaps no man ever made so much of a position of which most men would have made so little." He does not bring out, as many Harrovians would like, the services to the school and to English boyhood of the well-known housemaster and poet, the late Mr. Bowen. *Forty years on* has made thousands who are not Harrovians mourn the passing away of a unique figure from English life.

Anatomy of the Cat. By Professor Reighard and Instructor Jennings of the University of Michigan. Henry Holt & Co. Pp. 498; 173 figs.

This publication exemplifies the fact that the "harmless, necessary" animal in question is rapidly becoming indispensable in a sense not dreamed of by the poet. In contradistinction to five other works enumerated, this "aims to give a complete description of the normal anatomy of the cat, in moderate volume and without extraneous matter." The muscles occupy more than one hundred pages, but we must be permitted to doubt whether the brain is "completely" described in thirty pages of text, or adequately represented in seventeen figures, mostly on too small a scale. An "Appendix of Practical Directions for Dissection" refers helpfully to the descriptive portion of the work. The authors frankly admit that "the question of nomenclature has been one of difficulty," and devote to it nearly four pages of the preface. We apprehend that the confession of faith in the B. N. A. (the set of terms adopted at Basel in 1895 by the Anatomische Gesellschaft) may not shield our authors from the imputation of terminologic heresy in respect to the considerable number of departures therefrom. Most of these transgressions will commend themselves to progressive English-speaking anatomists. Some of them have been proposed by British or American naturalists at various times since 1802, and certain of them have been adopted by one or more scientific bodies in this country. Is the total absence of allusion to these historic facts due to ignorance of them upon the part of our authors, or to their solicitude lest acquaintance with them should affect undesirably the minds of American students? We prefer the former alternative.

The index is unusually full, printing and press-work are excellent, and misprints are rare. Under this latter head is not included the constant and inexcusable use of Monroe for Monro in a term which, as a whole, has no need of perpetuation excepting as a synonym.

BOOKS OF THE WEEK.

Abba, G. C. Von Quarto zum Volturno. Alexander Duncker. $1.35.
A Handbook of Proverbs. New Amsterdam Book Co. 75 cents.
Arber, Edward. (1) The Cowper Anthology, 1775-1800; (2) The Dunbar Anthology, 1401-1508. Henry Frowde. 2s. 6d. each.
Benedict, F. G. Chemical Lecture Experiments. Macmillan. $2.
Benson, E. F. The Luck of the Vails. D. Appleton & Co. $1.50.
Biggar, H. P. The Early Trading Companies of New France. Toronto: University of Toronto Library. $4.
Blissett, Nellie K. From the Unsounded Sea. D. Appleton & Co.
Bowker, R. R. The American Catalogue, 1895-1900. Publishers' Weekly.
Bridges, Robert. A Practical Discourse on some Principles of Hymn-Singing. London: Simpkin, Marshall, Hamilton, Kent & Co.
Brown, H. W. Latin America. Fleming H. Revell Co. $1.20.
Brown, J. H. Lamb's Biographical Dictionary of the United States. Vols I.-III. Boston: James H. Lamb Co.
Bulletin of the Salem Public Library, Vol. V. Salem (Mass.).
Burdick, L. D. Foundation Rites. Abbey Press. $1.50.
Calkins, Raymond. Substitutes for the Saloon. Houghton, Mifflin & Co. $1.30.
Cander, W. A. Christus Auctor. The Baker & Taylor Co. $1.25.
Carlile, W. W. The Evolution of Modern Money. Macmillan. $2.50.
Cawein, Madison. Weeds by the Wall. Louisville: J. P. Morton & Co. $1.25.
"C." Home Thoughts. A. S. Barnes & Co. $1.50.
Chefs-d'œuvre of the Exposition Universelle. Parts 10 and 11. Philadelphia: George Barrie & Son. $1 each.
Chevrillon, André. Etudes Anglaises. Paris: Hachette et Cie.
Churchill, Lida A. The Magic Seven. The Alliance Pub. Co. $1.
Cobern, C. M. Commentary on the Old Testament, Vol. VIII.: Ezekiel and Daniel. Eaton & Mains. $2.
Colby, F. M. The International Year Book for 1900. Dodd, Mead & Co.
Collar, W. C., and Daniell, M. G. First Year Latin. Ginn & Co. $1.10.
Comstock, J. H. Insect Life. Ed. in colors. D. Appleton & Co. $1.75.

JUST PUBLISHED.

Edgren & Burnett's French-English and English-French Dictionary.

By HJALMAR EDGREN and PERCY B. BURNETT. 1252 pp. 8vo, $2.50 *Retail.*

A thoroughly up-to-date dictionary, with some noteworthy features. Most important of all, probably, is the treatment of the subject of pronunciation. This is indicated with the greatest care, not by transliteration, but by the use in doubtful cases of subscript diacritical marks, representing actual French sounds. The system is simple and requires no knowledge of phonetics. Another new feature is the brief indication of the etymology of every French word, together with the date of its earliest occurrence. In extent the vocabulary will be considerably larger than that of any other moderate-sized French dictionary, including many rare words and a large number of recent words.

Henry Holt & Co.

378 Wabash Ave., CHICAGO. 29 W. 23d St., NEW YORK.

Telephone Lines And Their Properties.

By WILLIAM J. HOPKINS, Professor of Physics in the Drexel Institute of Arts, Science, and Industry, Philadelphia. *New Edition, Revised and Enlarged.* Crown 8vo, pp. xix.-307, $1.50.

[*Just Ready.*]

"As the changes in telephone practice within the past two years have made necessary some changes in the text, it has been thought best to make the revision as complete as possible. Several chapters have been almost entirely rewritten, many diagrams added, and the number of half-tone reproductions of photographs largely increased. An account of the latest developments in the design of long lines has been added, and a short chapter on Composite Working and Wireless Telephone."

BOOKS ON NATURE STUDY

BIRD PORTRAITS

By ERNEST SETON-THOMPSON; described by RALPH HOFFMANN. Pictures by this distinguished artist of familiar birds, printed on heavy coated paper, 8½x12 inches in size. The entertaining descriptions by Ralph Hoffmann of the Audubon Society and one of the authors of "Bird-World," make a delightful accompaniment to Mr. Seton-Thompson's pictures. Quarto. Cloth. $1.50.

FIRST STUDIES OF PLANT LIFE

By GEORGE F. ATKINSON, Professor of Botany in Cornell University 85 cents.

A fascinating and original study of the life histories of plants. The illustrations in the book, which number more than 300, have been especially collected for these stories and include many rare and beautiful photographs.

MOTHS AND BUTTERFLIES

By MARY C. DICKERSON. Large 8vo. Cloth. Profusely illustrated. $2.50.

This will undoubtedly prove the most popular book of its kind which has appeared at a reasonable price. The author's intimate knowledge of her subject, her thoroughly popular and entertaining style of writing, and her skill with the camera and pencil are some of the qualities that will commend the book to all observers of out-of-door life.

WAYS OF WOOD FOLK

By WILLIAM J. LONG. Fascinating descriptions of animals and birds as seen at play in their homes. With seven full-page illustrations by Charles Copeland and William Hamilton Gibson, and numerous smaller pictures and illustrative initials and headpieces. For introduction, 75 cents.

WILDERNESS WAYS

By WILLIAM J. LONG, author of "Ways of Wood Folk." Illustrated. For introduction, 75 cents.

Another excellent nature book that is quite up to the high standard of "The Ways of Wood Folk."

The author lets the reader into the hidden life of the wilderness, not from books or hearsay, but from years of personal contact with wild things of every description.

An Uncommonly Interesting Life.

Autobiography of a Journalist.

By William J. Stillman.

With two Portraits. Two Vols. 8vo, gilt top, $6.00.

Mr. Stillman's work is a very frank record of a remarkable career, and gives views or glimpses of a host of notable persons. The deep and widespread interest excited by it is indicated in the following comments from leading papers in all parts of the United States:

Chicago Inter Ocean.—"It is, in style, grasp, and scope, one of the most notable publications of the year. . . . The book is more than the autobiography of a journalist—it is the reminiscences of an artist and personal recollections of a man who had a wide acquaintance among men of great reputation in literature and art, in politics, diplomacy, and statecraft."

New York The Churchman.—"Everybody who has followed Mr. Stillman's diplomatic and journalistic career . . . has known that he had a story to tell, so admirably worth the telling that it would be a real loss if he were to leave any one else to gather and put together what he alone could give in its true setting and with its freshest color."

Baltimore News.—"The record of a life that has had something in it worth recording . . . a sidelight on the artistic and political history of half a century."

Philadelphia Press.—"Will be read for many and many a day with pleasure and appreciation."

New Orleans Times-Democrat.—"Has all the fascination of romance with the added attraction of reality."

Providence Journal.—"It is impossible to do justice to Mr. Stillman's book in any abstract of its contents, however full. Those who miss reading it miss an unusual opportunity for keen enjoyment. There are little touches which no review can indicate, and all manner of distinguished persons appear from time to time in its pages."

Detroit Free Press.—"Through all we read the entrancing story of the development of a noble, useful career."

New York Mail and Express.—"There is more than journalism in this autobiography. There is an earnest, manly nature; there are portraits of people whom we desire to know; there are personal struggles and experiences; there are glimpses of other lives and races than our own, for Mr. Stillman has seen his Europe, before and behind; there is an artist; there is a journalist ripened into a man of letters, and, in brief, in a large sense, there is literature. It is a book to be read thoughtfully and long remembered."

San Francisco Argonaut.—"The candid, modest personal record of a genial, yet discriminating, artist, whose opportunities for observation and judgment were much above the ordinary."

Boston Living Age.—"Covering an extended and extremely varied career and written with what, at times, seems an amazing candor, it holds the attention of the reader from the first page to the last."

St. Louis Globe-Democrat.—"Mr. Stillman tells the story of his connection with men and events of various sorts in many lands with rare literary charm. The biography is a genuine contribution to literature."

Portland (Me.) Press.—"Of all the lives of famous Americans that have been written, there has been none for many a year so absolutely unique, and fascinating, and extraordinary."

Pittsburg Commercial Gazette.—"Not the royal imagination of the most audacious romancer could conceive a *milieu* more rich and varied than that of Stillman's life-story."

STUDY AND PRACTICE OF FRENCH

by L. C. Boname, 258 S. 16th St., Philadelphia, Pa.

A carefully graded series for preparatory schools, combining thorough study of the language with practice in conversation. *Part I.* (60 cts.) and *Part II.* (90 cts.) for primary and intermediate grades, contain subject matter adapted to the minds of young pupils. *Part III.* ($1.00, irregular verbs, idioms, syntax and exercises) meets requirements for admission to college. *Part IV. Handbook of Pronunciation* (35 cts.) is a concise and comprehensive treatise for advanced grades, high schools, and colleges.

Handbook of British, Continental, and Canadian Universities.

With special mention of the COURSES OPEN TO WOMEN. SUPPLEMENT FOR 1901. Compiled for the Graduate Club of Bryn Mawr College by ISABEL MADDISON, B.Sc., Ph.D. The Supplement and Handbook will be supplied together for 90 cents (postpaid $1.00), and the Supplement will be supplied separately to subscribers to the Handbook for 25 cents (postpaid 30 cents). Orders may be addressed to Miss ISABEL MADDISON, Bryn Mawr College, Bryn Mawr, Penna.

AN EDUCATIONAL DIRECTORY

I.—THE NATION stands alone in its field. It has the largest circulation of any literary and political journal published in this country, going to all the principal libraries and reading-rooms, and into thousands of families.

II.—The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

III.—The School List in THE NATION has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

IV.—The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12 1-2 per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 206 to 210 Broadway, N. Y.

"It is all entertaining and brimful of the author's characteristic wit."—Miss Gilder in The Critic.

A Book of Remembrance

By MRS. E. D. GILLESPIE

After-dinner stories of famous people by Ben. Franklin's great-granddaughter.

Illustrated. Crown 8vo, cloth, $2.50 net.

"The book that reminds one of Anna Katherine Green in her palmiest days."—Town Topics.

That Mainwaring Affair

By A. MAYNARD BARBOUR

Six editions of this detective story mark its popularity.

Illustrated. 12mo, cloth, $1.50.

By the author of THE GADFLY

CLOTH $1.50

Jack Raymond

When Blades Are Out and Love's Afield

By CYRUS TOWNSEND BRADY

A Romance of Revolutionary days, full of tender love and gallant deeds.

"Thompson never succeeded more cleverly than in this story."—St. Louis Globe-Democrat.

Sweetheart Manette

By MAURICE THOMPSON

With all the charm of the author's other success, "ALICE OF OLD VINCENNES."

Publishers J. B. LIPPINCOTT CO. Philadelphia

The Nation.

NEW YORK, THURSDAY, JUNE 27, 1901.

The Week.

"They would have abolished history itself had it been in their power," said Mazzini of the Italian reactionaries, and Senator Foraker's speech to the Ohio Republicans on Monday shows that affronts are still offered to the historic muse. His account of the magnificent condition in which Harrison left the finances in 1893, and the reckless work of Cleveland in bringing the country to the verge of ruin, is a travesty of the facts. But it is in the more dangerous because more recent history of Porto Rican legislation that the Senator is most astray. He pictures the sages of the Republican party as, from the first, revolting in horror from the idea of free trade with Porto Rico. To have adopted free trade at once would have led to "universal chaos and universal failure." Of course, therefore, none but blind and ruin-loving Democrats favored the policy. So far the Senatorial historian; but what are the facts? Why, everybody knows that this terrible and suicidal policy of free trade with Porto Rico was described by Secretary Root as our "highest obligation," and was urged by the President as our "plain duty"; everybody knows, too, that the first draft of the bill reported by the Republican Committee on Ways and Means provided for free trade; that then the protected interests of the country took alarm, and, as they themselves boasted, "read the riot act" in the White House; that the bill was changed; that the evident bad faith of the thing roused a storm of Republican protest; and that, in order to pass the measure at all, it had to be whittled out of shape and made to give the Porto Ricans free trade at once, all but 15 per cent., and the promise of absolute free trade in the near future. And after all that, Senator Foraker had the coolness, with the thermometer at 95, to boast that "our success has been so complete" that the Porto Ricans are to have free trade next month! This is magnificent, but it is not history.

No great change, except that of attitude, is implied in the order of the Secretary of War establishing on July 4 a civil government in the Philippines. Things will obviously go on much as before, since the Military Governor is necessarily left supreme in all provinces where troops have to be continuously used to keep order. Yet the step is to be hailed as a formal recognition of improved conditions in the islands, and a reminder that our business is to put the people on their feet with a government of their own as speedily as possible. Gen. Bates has recently testified in the strongest way to the undiminished desire of the Filipinos for an independent government. As we have begun to consult their wishes in minor matters of municipal government, we shall have to come, sooner or later, to the position of consulting them in regard to the general frame of government for the archipelago.

The figures concerning the commerce of the Philippine Islands published by the War Department indicate that the time has not arrived when the United States is to grow rich out of this territory. During the first ten months of the year 1900 the Philippine imports increased to $20,143,000, as compared with $16,644,568 during the corresponding period of 1899, a gain of nearly $3,500,000, or 21 per cent. The exports increased from $12,975,000 to $19,372,000, or almost one-half, the gain being no doubt due to the release of the accumulations of hemp. The share of the United States in this commerce, however, was relatively small, and is growing smaller. Imports from the United States, it is true, increased materially, from $1,218,000 to $1,740,000, but exports to the United States fell from $3,316,000 to $2,341,000, while those to European countries rose from $4,684,000 to $10,519,000. The "balance-of-trade," or "mercantile," theory maintained by the protectionists, regards small imports from foreign countries as desirable; but it is hard to tell whether the decision of the Supreme Court makes the Philippines sufficiently foreign to justify us in complacency over our small imports from them.

Municipal elections in Cuba are supposed to be entirely turned over to the natives, yet it is stated that at least eight of the mayors elected on June 1 are to be put out of office by our military rulers. It is alleged that the elections were fraudulent. This may have been the case, though the electoral law was framed by our officers expressly to guard against fraud. Of course, the Cubans have always been used to military control, expect nothing else now, and will not seriously complain. But the incident shows how hollow is the pretence that Cuba is under anything but a régime of force. This was clearly recognized by the President of the Cuban Convention when he notified Gen. Wood that the Platt amendment had been adopted "in conformity with the order from the Military Governor of the island." This is the fulfilment of our promise never to "control" the Cubans. Yet the *Tribune* now endorses as "frozen truth" the following cynical account, in the Brooklyn *Eagle*, of the American way of keeping faith with Cuba:

> "We presume that a period of so-called independence for Cuba is necessary on account of American folly embalmed in the Teller resolutions. But that independence will necessitate an American protectorate from the start, and the protectorate should steadily work toward possession, annexation, or an equivalent thereof."

Too many Americans talk and write about the people of Cuba in the most offensive terms, and seem to desire the failure of their attempt at government. A sample of this class is Representative Hepburn of Iowa, a prominent member of the House, who was recently quoted as saying that "the Cubans are children"—he feared, "pretty bad children"; that they are "not capable of self-government," and that "in twelve months they will be at each other's throats." Other public men not less prominent have publicly characterized a majority of the delegates in the Constitutional Convention as mere adventurers and agitators. This is certainly not the way to encourage a people who are about to try an experiment in government. Moreover, as the *Independent* points out, the Cuban leaders have some knowledge of the history of our municipal, State, and national politics, and "they have come to think that we ourselves are not wholly pure and free from guile." There are among them men who read American newspapers, and who come across such statements as this in the Philadelphia *Ledger* regarding present conditions in the second State and the third city of the American Union:

> "This city and State have gained a national evil reputation for lack of public spirit, courage, and manly devotion to clean, decent government. A political organization, held together by the cohesive power of plunder, has obtained possession of the governmental machinery, and until we choose to wrest the rule from them we trust that Pennsylvanians will not prate about our mission to take the blessings of civilization and pure self-government to the Philippines and other benighted lands."

The Philadelphia ring appears to have laid the last straw on the camel's back by refusing to renominate a District Attorney who has been so bold as to prosecute some influential politicians. This action is taken by the public as meaning that the ring is determined to secure a subservient District Attorney, and that the only restraint upon corrupt government is to be removed. A town-meeting has been called for the express purpose of nominating the present District Attorney as an independent candidate, and the movement will be watched by the whole country with interest. The call denounces the attempt of the

ring to prostitute the administration of justice, and declares that "with this important office in their possession, all hope for better government might as well be abandoned, for it stands to-day as one of the few bulwarks between the law and the criminal, between order and misgovernment, between honesty and theft, and it should, at all hazards, be kept from the control of the political machine." This is sound doctrine, and it has its application elsewhere than in Philadelphia. The power of the District Attorney in any large city is enormous; great for good, and even greater for evil. No better issue could be raised by the people of Philadelphia than the one now offered, and if they cannot meet it by electing this independent candidate, it is hard to see how they can redeem themselves from political servitude.

Mr. Coler's sneers in the *Independent* at "professional reformers" are, to say the least, in bad taste. They betray an anxiety on his part to pour upon others the odium which, a year ago, Croker was pouring upon him. At that time it was he who was held up to scorn as a silly fellow, posing for reform. He then professed to welcome the slander; but now he is flinging it at others. His sketch of the alleged platform of New York city reformers is pure caricature, as none should know better than himself. To "make the city good and virtuous by force" is about as far from the expectation of the Citizens' Union as it is to make a politician, who is secretly desirous of getting back into Croker's favor, good and virtuous by force. Mr. Coler talks about the "stale platitudes" of reformers. But what could be staler or more of a platitude than his own programme, which he brings out with such a flourish of discovery—namely, "personal liberty without license"? Adam, Eve, and the serpent discussed that platitude in the Garden of Eden, and it was as meaningless then, so far as having any practical application to a particular case in hand, as it has been ever since. It all depends upon what you mean by "liberty," and what by "license," and Mr. Coler has no advantage over his despised professional reformers when it comes to definitions.

The people of New York may well contemplate the administration of "Jersey justice" with envy. The trial that has just ended with the conviction of Barker was so conducted as to increase the confidence of the community in juries, in judges, and in the law itself. The case was full of sensational elements, and it would probably have taken weeks to empanel a jury in the city of New York. We cannot undertake to say that a New York judge would not have repressed the attempts of the defence to get in irrelevant evidence, but the public would not have been surprised had the rule of law been less sternly applied than it was by Judge Blair. We should probably have seen the whole question of "emotional insanity" exploited by hosts of experts and argued at great length by counsel, with the result of perplexing the jury and bringing about their disagreement. A second and third trial might have followed, with a final abandonment of the prosecution. The expense would have been great, justice would not have been satisfied, and the law would have been discredited. On the other hand, the New Jersey trial has been speedy, inexpensive, and impressive. The jury were held to the consideration of a single matter of fact, and they performed their duty conscientiously and intelligently. As to the merits of the case, it is enough to say that Mr. Barker took the law into his own hands, and has suffered the penalty. So long as justice is administered by the courts as it is in the State of New Jersey, there is no excuse for "private justice."

It is an admirable gravity with which the Manufacturers' Club of Philadelphia resolves against any further "political agitation" about the tariff. Whether by way of the reciprocity wedge or the Babcock club for removing the duty on articles produced by tariff-protected Trusts, it would be simply fatal, say the Philadelphia manufacturers, to have the whole question laid "open" again, and a chance given for "politics" to enter in once more. The idea is that you may get your tariff by politics, by the Pennsylvania brand of politics, smelling to heaven as it does, but that to attempt to dislodge you from your eligible seat at the receipt of public customs for your own private use is nefarious and almost criminal. This is solemn though amusing nonsense. When was the tariff anywhere but in politics? It has made and broken public men and parties from the day the Pennsylvanians first raided the Treasury, and there is no reason to doubt that it will go on doing so. Keep the tariff out of politics? That would mean to keep out all questions of taxation, to tell the American people that ways of raising revenue are not a fit subject for political debate. It would also mean that we must not discuss corruption in public life, not say a word about buying seats in the Senate, be silent about the demoralization of the civil service. Americans will stop talking tariff in politics on the day when they conclude to shut up the shop and go out of the political business altogether; and not before.

No defence of the removal of William J. Gibson from his position as counsel to the Board of General Appraisers can be secured by the most diligent inquiry on the part of *Times* correspondents in Washington and Boston. Secretary Gage of the Treasury Department, being asked whether he desired to make any statement with reference to the "revocation" of the appointment, answered at once:

> "Mr. Gibson has held his place about six years, and he has done very well. I have nothing to say against him in any way, shape, or manner."

Being asked whether any suggestion had ever been made from the Board of Appraisers that Mr. Gibson ought to be removed, Mr. Gage replied that there had not been, and he made the same response to an inquiry whether it had ever been intimated that Mr. Gibson's discharge of his duties was in opposition to any policy of the Administration.

We are told that the salt of the whole earth is now about to pass under the control of a single corporation—Russia and the "savage" countries for the present escaping. The operations of the company will be carried on throughout the Western Hemisphere, and will extend not only over Europe, but also embrace Japan, China, and the continents of Asia and Africa. The Salt Union of England already monopolizes the business of supplying salt in Great Britain and her colonies, the Canadian Salt Company controls the trade in the Dominion, while the National Company takes care of this country. By combining these, it is proposed to establish the most comprehensive monopoly that the world has yet known. The salt tax imposed by various Governments has long been abolished in most civilized countries, and where it has remained it is a synonym for odious exaction. But if this great combination is successful, it would seem that a universal salt tax might be laid on the human race, whether the laws of particular nations ordained it or forbade it. Allowing for a great deal of exaggeration in the published accounts, the idea that such a combination is even thought of is decidedly disquieting.

Gov. Crane's victory in the matter of the Boston Subway Bill before the Massachusetts Legislature was sweeping. The vote in the lower branch, on passing the bill originally, had been 159 yeas and only 45 nays; after the veto there were only 98 yeas and 135 nays. No fewer than 68 Representatives who voted yea on the 6th of June changed to nay on the 19th, while 22 of the 29 members who were not recorded the first time sustained the Governor. This is an extraordinary tribute to the influence which may be exerted by a courageous and conscientious executive through the use of the veto power. Ordinarily mere pride of opinion prevents many legislators from changing their position on a contested issue such as this had been, but here is a case where 68 out of 159 Representatives—or pretty nearly half

of all—who at first decided to favor a bill which was thoroughly discussed, felt constrained to oppose it when the Governor had shown their constituents how utterly indefensible the scheme was. The value of the veto power in the hands of a right-minded Executive is signally demonstrated by such an incident.

We are sure that all hearts are full of sympathy with the Secretary of State and Mrs. Hay in view of the sudden calamity that has befallen them. As a general rule, public sympathy in such cases can best be shown by a discreet silence. In this instance we may be permitted to express the common hope that the father, whose own health has been not a little impaired by the labors and anxieties of a trying office, may not be so crushed by this unexpected blow that his usefulness to the country will be sensibly impaired. Mr. Hay has rendered such good service to the nation during the past four years, and with such unconsciousness of merit on his own part, that he has won the admiration of his enemies, if he had any. It is the hope of the whole people, we think, that he may be able to continue his work which he has so well discharged thus far, and hence that he may not be utterly overwhelmed by grief for the loss of a dearly loved and promising son.

Renewal of the old proposition to make the Hawaiian Islands a part of the State of California is due, no doubt, to the general discouragement over the present political status of the Territory of Hawaii. Its first year has been one long disappointment. Governor and Legislature have been at daggers drawn. The latter accuses the former of usurpation, and he retorts by charging the legislators with corruption and bribery. What is more, he proved his assertion, so far, at least, as to get one promoter to go into court and swear that representatives had demanded bribes of him. Nor have the judiciary escaped the universal scandal. Federal Judge Humphreys is alleged by the Bar Association of Honolulu to have prostituted his court to personal and political ends, and his removal from office is petitioned for by these lawyers. President McKinley, it is true, sent word from San Francisco to the quarrelling Hawaiians to be good and harmonious, and, dropping all differences, to work like a band of united patriots for the good of the greatest flag that ever, etc.; but this seems to have been only a signal for fiercer factional fights and more embittered rancor. Hence the "happy thought" to have the islands constituted into five counties and a Congressional district and annexed to California. Such a step might be in the interest of economy, since it would dispense with several useless and high-salaried offices; but it would not instantly convert the Hawaiians into angels. In Territory or in State or county, they have got to work out their own self-government, and will have to stew in their own fat till they do.

Sir Michael Hicks-Beach seems to take delight in scorning and opposing the economic fads and fallacies of Mr. Chamberlain. That statesman's scheme for "preferential duties," as between England and her colonies, came up in the Commons in the absence of the Colonial Secretary. He was detained at home by an attack of the gout—a queer disease for an old Radical to be down with; high society appears to have been too much for him. But the Chancellor of the Exchequer declared, with his freezing manner, that he would have "nothing to do" with preferential duties, which he characterized as perilous nonsense; and the House was very much of the same mind, as only sixteen votes could be mustered in favor of the project. But this will not in the least trouble the agile and honorable Joseph. He has unblushingly thrown over his old-age-pensions schemes and promises, and can do as much without effort for his preferential-duty issue.

Mr. T. W. Russell, in a recent speech at Belfast, called attention to the painful contrast between the lavish expenditures of the British Government for the South African war and its parsimony in dealing with the land question in Ireland. The recent budget imposed additional taxation to the amount of £11,000,000 per annum, and authorized a loan of £60,000,000. All this money has been spent, and there is nothing to show for it but a ruined country and an embittered population. Mr. Morley, by the way, has estimated the cost of the war, taking into view the increased expenditure on the army, as representing an addition to the national debt of £470,000,000, which would make Mr. Russell's argument so much the stronger. For it would require but one-fifth of this sum to buy out the Irish landlords and end the ancient feud that has alienated the Irish people from the English. Moreover, this money would not be spent, but only loaned on good security; it would earn interest and be repaid in instalments until the whole debt would be cancelled in forty-nine years. As to the argument that the tenants might refuse to repay advances, Mr. Russell pointed out that the Government had already advanced the money required to buy out the landlords' interest in 60,000 cases, and had lost absolutely nothing by it. It would thus be practicable for the British Government to secure the loyalty and win the affection of the Irish people by guaranteeing a loan for £100,000,000, the collateral security for which would be ample, whereas it has wasted five times this sum in insuring the disloyalty and enduring hatred of the Boers.

The revelations concerning the sufferings of the Boer women and children held in the "concentration camps" are undoubtedly shocking the humane sense of England. When the matter was called up in Parliament, the Government majority, even with the abstention of fifty Liberals, fell to little more than 100. The defence is simply the stern necessity of war. This may justify the measure from a military point of view, and it is doubtless true that the women and children are fed and cared for as well as Gen. Kitchener can do it with the resources at his disposal. But the English public did not know what was going on, and must be filled with fresh shame and horror at the ignoble and apparently endless war which is making South Africa a vast cemetery for both Dutch and English. If peace proposals are again made, it will be harder than before for Chamberlain to break them off on a punctilio. Just what was the reason for the failure of the former negotiations with Botha has never been clearly explained; but it appeared in evidence that Gen. Kitchener in the field was willing to be more generous to the foe than was Chamberlain in the Cabinet.

The open split of the Liberal party over the Boer war is better than the ill-concealed division which has existed ever since Kruger's ultimatum. Attempts have been made to patch up differences and hope for better days; but the dragging and mortifying war has been too much for either patience or for quiet agreement to differ. The Liberal Imperialists, as they call themselves—Rosebery and Sir Edward Grey and Mr. Asquith—have found it impossible to mix their oil with the vinegar of Mr. Morley and the Radical wing, and Thursday night's deliverance by Mr. Asquith is a notification that the rupture is complete. This is unfortunate, from a party standpoint, but it is desirable in the interests of honest and frank politics. The Boer war really thrust a sword into the vitals of the Liberal party, and there is no use trying to cover up the wound. One result of the proclamation of irreconcilable Liberal differences will probably be to increase the manifestations of discontent within the Conservative ranks. How great this is admits of no doubt. A writer in the *National Review* sets forth the grounds of dissatisfaction with the Salisbury Government which Unionists have. Some are even going so far as to forecast a sort of coalition Ministry, Salisbury to retire, and a kind of Centre party, made up of Liberal Imperialists and the younger Conservative leaders, to take office.

POLITICAL INDIFFERENCE.

Attempt has been made by our "best-of-all-possible-worlds" political philosophers to make capital for Imperialism out of the lack of political agitation in this country. Just see, they say, how quietly the Supreme Court decision was accepted. A little spluttering and muttering, but then calm and an ignoring of the whole thing. Is anybody excited about Cuba? Where are the mass-meetings, the protests, the organized movements which would surely result if things were as bad as you say? The argument is that apparent indifference means hearty approval; and that all assertions that our new-fangled colonial policy is, in the language of Benjamin Harrison, a "serious departure from right principles," go for nothing in the absence of an infuriated populace demanding its abandonment.

Now we beg to observe, in the first place, that this reasoning is pure Tammany. It is precisely the line of defence taken up by our robbers and rulers of the Wigwam. They can scoff with the best of our Imperialistic optimists at the notion that anything is wrong with our city government. "It's all fudge," they cry, "this talk of the newspapers about corruption in New York. Why, if it were true, the people would rise. There would be indignation meetings, vigilance committees, and somebody would be hung. But you don't see any signs of excitement among the people, do you? The citizens just go quietly about their business, and show in that way that they do not believe a word of your slanders." For our part, we think this Tammany defence is complete—that is, if the Imperialist defence is. Both reason from exactly the same premises to the same conclusion. And if we were bellowing optimists about what is going on in Havana and Manila, we should never have the face to lift our voices against what Tammany is doing in New York. Tammany is just as truly "inevitable," just as much an Hegelian "world-process," as American expansion is; and if the latter is a great good because it is "useless" to oppose it, so is the former.

Leaving the optimists to take a still more pessimistic view of Tammany for thus asserting ownership of one of their own arguments, we have to remember that political indifference has always been characteristic of a time of great commercial prosperity. A roaring trade drowns out for a time the still small voice. Scruples cannot get a hearing when the land is filled with the hum of industry, when the streets resound with traffic, and the Stock Exchange boils with excitement. This is perfectly natural, nor is it wholly an evil. Political duties are not the most imperative. A man has to work for himself and his family before it is his obligation to see that the republic take no harm. And in a time when opportunities are multiplied and the daily demands on strength and thought are more pressing, a comparative indifference to what is going on in the political world is to be expected. It is, at any rate, one of the commonest marks of a prosperous period. The mischievous side of it is that it gives intriguers and ambitious politicians a good chance to commit the country to "an adventurous departure on untried paths," as President McKinley described in advance the policy which he denounced before adopting. But their day of reckoning comes later; and an interval of inaction and seeming acquiescence does not really stay the moving finger which writes their final judgment.

Another reason for the prevalent political indifference is that there is nothing at present for excitement to wreak itself upon. Ebullitions and cries, merely for the sake of filling the streets and making a din, have never been the Anglo-Saxon way, and we hope never will be. We are not Celts or Gauls, wildly to desire to "make the coort ring," whether we have any case or not, or madly to rush about to *conspuer* somebody. Our way is to watch for a chance to strike an effective blow; to nurse our wrath, to bide our time, and to act upon the knowledge that political results can be reached only by political means. There is really no occasion for excitement just now. We are four months from the first election; sixteen months from the choice of the next Congress. If people are soberly and resolutely thinking how they will vote when the time comes to vote, that is much better than going about with drums and banners and kicking up an awful but ineffectual row.

The truth is, that the argument from indifference cuts both ways. If we can point to few indignant outbursts against Imperialism, neither can any genuine endorsement of it anywhere be discovered. It is something about which the people have not expressed their minds. The colonial departure has never yet been put to vote, and we have the assurance of a prominent Republican Senator from the West that, if it were, it would be, as a permanent policy, voted down overwhelmingly. Popular indifference is no proof that the people are not open to conviction, all in good time, or that they are not even now keeping up a tremendous thinking. Indifference is, in fact, a bad sign for an innovating policy like that of Imperialism. If there is not enthusiasm for it, its doom is certain. Proved indifference in a republic is that which should be most alarming to those who have undertaken to change its historic policy. The fair inference is that the new way has not found favor, and that the old tradition will assert itself again. Burke's great cattle beneath the shadow of the British oak, who chew the cud and are silent, seem very indifferent, politically, compared with the "importunate chink" of half a dozen grasshoppers under a fern; but his historic reminder is in point, that "the little shrivelled, meagre, hopping, though loud and troublesome insects of the hour" are not to imagine themselves "the only inhabitants of the field."

NEW APPLICATIONS OF PROTECTION.

The news that the Russian Government has increased its tariff on still other exports from this country will arouse conflicting emotions. Only the day before we were told that the Secretary of the Treasury had increased our tariff on sugar imported from Italy—a proceeding which every protectionist must applaud. The Italians have been encouraging their home industries, contrary to the letter and spirit of the Dingley tariff, and they deserve to be punished for it. But the Russians have undertaken to punish us because we have been encouraging our home industries, contrary to their tariff.

Count Cassini, the Russian Ambassador, explains that the tariff laws of Russia require that duties on goods imported from this country shall be raised whenever we raise the duties on goods that we import from Russia. The Collector of the port of Philadelphia recently discovered that some unprincipled merchant was importing preparations of petroleum made in Belgium without producing a certificate naming the country in which the crude petroleum was found. The wise and prudent Dingley had no mercy on such underhand and surreptitious methods of trading. He ordained that if any importer was base enough to attempt any such concealment, his goods should be subjected to the highest duty imposed by any country on similar goods imported from this country—in this case, the Spanish rate of duty being applicable. And now comes the Russian Ambassador and says that wisdom and prudence did not die with Dingley, but survive in De Witte, and that, if our Government proposes to raise duties, the Russian Government will "call the bluff" every time.

These events, as we have said, must arouse conflicting emotions. Many of our manufacturers, having prospered under our system of protection until they begin to crowd one another, have begun to export their products very largely. It is probably impossible to tell the amount of the goods sent to Russia, because we do not know what part of them is consigned to ports in other countries and forwarded thence in bond; but the amount is very large. Russia is building railroads, and needs many rails and cars and engines. She is increasing her manufactures, and requires

much new machinery. She has vast prairies, the productiveness of which would be greatly increased by an enlarged use of American cultivators and harvesters. The field is tempting. Our manufacturers gaze at it with longing eyes. The sagacious Dingley said that reciprocity might sometimes be permitted; that treaties might be made providing for a reciprocal reduction of duties. Our exporting manufacturers probably think that this provision should now come into play, but the Senate thinks otherwise, and resorts to the reciprocal raising of duties. The Russian trade is ruined, and the manufacturers wail and gnash their teeth; but the system of protection is vindicated.

In this last reflection our manufacturers should find their consolation. They have been taxing their fellow-citizens at increasing rates for half a century, in order to foster their infant industries. But the industries of Russia are far more infantile than ours, and need the most assiduous care from the Government. When we were building railroads and needed rails and engines, our manufacturers maintained that it would be wrong to buy them of foreigners, and put prohibitory taxes on their importation. But the iron works and machine shops of Russia are probably inferior to those of the last generation in this country, and if our iron industry needed protection then, that of Russia needs it still more now. The farmers of this country have had to pay high tariff taxes on nearly everything that they bought, and our manufacturers always said that it was good for them. They explained that there was nothing like the "home market" for farmers; and they are now in a position to apply the principle in the case of the Russian farmers. In fact, Russia affords a finer field for the "home-market" theory than this country ever did.

Of course our manufacturers will not be so inconsistent as to maintain that free trade, or even a "tariff for revenue only," would be advantageous to Russia. They have over and over again refuted, after the protectionist manner of refutation, every argument that can be advanced in support of any such proposition. They have demonstrated, by the most approved protectionist logic, that Russia cannot prosper, or even exist, as a sovereign Power, unless she develops her own manufactures. They have proved, by the most vociferous assertion, that manufactures cannot be developed unless taxes are levied on competing foreign products, and of course this great truth applies to Russian manufactures. Indeed, the exportation of our goods to Russia illustrates the principle, and proves the absolute necessity which compels the Russian Government to apply it. Our manufacturers have notoriously been "dumping" their surplus products on the Russian market, and crushing out competition, just as the wicked English manufacturers used to do in this country before statesmen like McKinley and Dingley put a stop to their deviltry by high tariffs. For all we know, the Russian manufacturers may even now be warning their countrymen against "American gold" and the tracts of our Free Trade League.

This triumph of the "American system"—for so our manufacturers have affected to name their tariff taxes and bounties—must give rise to some curious reflections. To the sincere protectionist, the man who, though it slay him, trusts in the theory that a government can enrich its people by taxing all of them for the benefit of a few, the consistent application of this theory by Russia must occasion a certain satisfaction. But, to the protectionist for revenue only, the conversion of Russia must be highly exasperating. Does not M. de Witte understand that all these protectionist arguments were intended merely to humbug the American people, and not to bolster up an antiquated economic fallacy? The tariff talk was meant for home consumption only. It was well enough so long as confined to its legitimate purpose of fooling the American farmer and the American laborer, but it would be wicked to employ it to delude the Russian peasant. Such reflections as these, however, cannot be uttered in public, and we shall remain for the present uncertain as to what is passing in the protectionist mind.

HOW IT STRIKES A SOUTH AMERICAN.

In these days of our effusive Pan-Americanism, Monroe Doctrine regilt, and grand Amphictyonic Council in Mexico under our benevolent hegemony, we easily forget that there is another party to it all. We are so confident of our own Continental goodness that it seems incredible there could be a doubt of it anywhere in even this wicked world. Our purity of Pan-American motive is so obvious to ourselves that we think everybody must recognize it at a glance. Yet we know, if we stop to think, that envy and suspicion assail the whitest virtue; and so we ought not to be surprised, even if we are pained, to find that some South Americans are a little shy of our professions of big-brotherhood. The Chilians will notoriously go to the Pan-American Congress in Mexico, if they go at all, and if there is any Congress at all, in a state of mind not unlike armed vigilance to frustrate the designs which they believe us to entertain. And now comes a weighty article from Buenos Ayres to set forth the Argentine point of view.

It is from the pen of Señor Gransac, librarian of the National Library in Buenos Ayres. With ample learning and a pungent style, he reviews the history of the relations between North and South America; traces the necessary failure of the first Pan-American Congress, and predicts a like fiasco for the second, if it ever meets; trenchantly discusses the Monroe Doctrine (new style), and dwells upon the serious modification of the attitude of the larger South American nations towards the United States which must inevitably result from the latter-day "flaming Yankee Imperialism." This writer may be all that is bad—prejudiced, blind, suspicious, ungrateful. Yet it is our duty to listen to him, to hear the *alteram partem*. He undoubtedly speaks for the prevalent sentiment in the States south of the Equator, and even Imperialists profess to want to know the facts. An essential fact in this whole Pan-American situation is the existence in the more powerful countries in South America of dislike for the United States, dread of her *espérances ultérieures* (in the phrase of the Russian Ambassador), and a determination to meet our advances with cold indifference, and our plans with quiet attempts to thwart us. It is this jealous and sub-acid distrust and aversion to which the Argentine librarian gives fuller utterance than we have heard from any equally authoritative source.

The question to which Señor Gransac specifically addresses himself is whether Argentina ought to send any delegates at all to the Pan-American Congress. It seems that a strong party is in favor of having the Argentines stand wholly aloof. But our librarian argues that delegates ought to go. Not that he thinks they will accomplish anything except to represent their country and to speak words of truth and soberness at Mexico—the truth being, Señor Gransac gravely observes, "fully as useful for the strong as for the weak." The three great aims of the first Pan-American Congress were (1) a plan for a customs union, (2) a scheme of Pan-American silver coinage, and (3) a hope of arbitration. All these failed of attainment, and all failed, as Señor Gransac contends with much force, on account of the unyielding selfishness and ambition of the United States. From what has gone before, he deduces the general principle that Pan-Americanism, in the mind of the United States, is simply "their own exclusive interest pursued at the expense of ours." Naturally, this Argentine writer looks for no better results at Mexico. The United States will continue to stick to its pig-headed tariff, and will continue to refuse to ratify treaties of arbitration; so what is there to be expected except a flux of words and unmeaning courtesies?

Señor Gransac makes it clear that the great and growing republics of South America—Chili, Argentina, and Brazil—feel themselves to-day much more threatened by the United States than by Europe. The peril to both their economic

and political independence they perceive to be greater from the North than from across the Atlantic. "These republics," writes Señor Gransac, "have no fear of civilized and industrial Europe—the only Europe we know. She exchanges her goods for ours without trying to shut out our products, and sends us thousands of her sons every year to become full citizens and defenders of their new country." The truth is that, for these larger States which now need no protection against European colonization, the Monroe Doctrine is, as our librarian says, "played out" (*gastada*). The kindly aid and shelter it once afforded them they do not longer require; what is left is the veiled threat against their own sovereignty, and this they resent. And in the events of the past few years they see ominous signs of a revival in the United States of the spirit of aggression and conquest, and know well that they are likely to prove its readiest victims. It is not strange, then, that they have their hesitations about meeting us in Mexico, "but yesterday dismembered by those who are to-day the conquerors of the Grand Antilles."

In a really searching and pathetic passage, Señor Gransac shows what a blow to the true prestige and ideals of the United States, as cherished in South America, our entrance upon a colonial policy has dealt. This, he says, is an attack, "not upon our autonomy, but upon our political beliefs, and an attack delivered by the very people who had impressed them upon us by both precept and example." Everybody knows that this is so. Our republic, our Constitution, were the models for all South America. But what is the impression made upon our own pupils by our going over to conquest and to the denial of self-government in Cuba and the Philippines? Why, says Señor Gransac, "we find ourselves bewildered, like a scholar in presence of the apostasy of his teacher. Having lost all faith in the apostle, we are in danger of losing faith in his gospel." And this scholar and patriot and true republican adds, in words which we may well file away for reference, that "the historian will not regard it as the smallest of the crimes of American Imperialism that it gave this profound shock to the souls of us South Americans."

THE CASE OF MR. GIBSON.

Six years ago last month William J. Gibson of this city was appointed counsel of the Treasury Department before the Board of United States General Appraisers, at a salary of $3,500 a year. The duties of the position are to protect the interests of the Treasury Department in cases coming before the Board, and Mr. Gibson has discharged these duties to the entire satisfaction of the Department, as officers of that branch of the Government have freely and repeatedly admitted. His appointment was made under the Cleveland Administration, but nobody ever thought of suggesting his removal in order to secure better service. The office which Mr. Gibson held is specifically mentioned in the Civil-Service Rules as one of the positions classified under the Civil-Service Act. It was excepted from the requirement of a competitive examination, because special qualifications are demanded of the person holding it which such an examination might not satisfactorily test. Nevertheless, the position is covered by the rule which provides that "no person in the executive civil service shall dismiss or cause to be dismissed, or make any attempt to procure the dismissal of or in any manner change the official rank or compensation of, any other person therein because of his political or religious opinions or affiliations." These facts should have assured the continuance of Mr. Gibson in the office as long as he would hold it, since the value of his services must increase steadily with every year of experience. Yet he has been turned out, and on Thursday the place was given to A. P. Washburn of Boston. The motive for this change, and the manner in which it was brought about, are set forth by the New York *Times* with evident knowledge of all the facts in the case, and the story represents, on the whole, the most discreditable surrender to the spoilsmen which we have seen on the part of the McKinley Administration.

Mr. Washburn was formerly private secretary to Senator Lodge of Massachusetts. Some time ago, he decided to begin the practice of law in New York city. He wished the salary of some Federal office while he was getting established, and fixed upon the place of Government counsel before the General Appraisers as most to his taste. He told his patron, and his patron told the President. Mr. McKinley, of course, pointed out to Mr. Lodge that the endorsement of the senior Senator from New York was essential to a New York appointment. The Massachusetts Senator, says the *Times*, "easily obtained from Senator Thomas C. Platt of New York a letter to the Secretary of the Treasury in support of his demand that a New York office be given to this Bostonian. Senator Aldrich of Rhode Island and Senator Platt of Connecticut joined in recommending the appointment." We may add that we learn, from a trustworthy source, that Senator Hoar of Massachusetts supported his colleague in this raid upon the civil service. The matter now rested with Mr. Gage, who had "repeatedly said that Mr. Gibson had performed the duties of his office to the entire satisfaction of the Treasury Department." This fact of itself should have prevented any consideration of a change for a single moment. Moreover, "officers of the Department who have Mr. Gage's confidence, and who were familiar with the facts, assured him that the removal of Mr. Gibson would be nothing less than a calamity." No suggestion of any possible reason for turning him out came from any source. Nevertheless, Secretary Gage caused intimations to be made to Mr. Gibson that his resignation would be acceptable. The faithful official naturally and properly asked the reason why. There was no satisfactory response to this inquiry. No charges of misconduct, inefficiency, or any failure of duty were made. But Mr. Gage continued to transmit further indirect requests for Mr. Gibson's resignation. All such attempts having failed, the aid of Attorney-General Knox was invoked, and on June 19 the head of the Department of Justice wrote to Mr. Gibson informing him that, at the request of the Secretary of the Treasury, his appointment as counsel of the Department before the Board of General Appraisers was "revoked," and on June 20 Mr. Washburn of Boston was appointed by Mr. Knox to fill the vacancy thus created. Of the Attorney-General's action the *Times* well says that the use of the word "revoked" in his letter "is plainly an act of calculation and of cowardice. An appointment may be revoked before the appointee has been installed, but it would be ludicrous, if it were not shameful, for the Attorney-General to attempt the revocation of an appointment under which six years of service have been faithfully performed."

It is hard to use temperate language in characterizing such a transaction. "Lodge wants the place"—that was the sole reason for it all. The Massachusetts Senator persuaded the President to concede it to him, provided Senator Platt would consent, as he did—with the understanding, of course, that Mr. Lodge would reciprocate when the New Yorker needed his help in some similar job hereafter. The Secretary of the Treasury could have prevented the outrage, or he could have preserved his self-respect and resigned. He did neither. He pleaded that the "pressure" was too strong for him to resist—this "pressure," as the *Times* says, coming from the White House, whose occupant had promised that the removal should be made. Nobody was then left to protect the interests of the public service and of the people who maintain it.

Senator Lodge comes out of the affair badly. Neither Platt nor Quay could more indecently have gone to work to "land" a place in the public service for a personal follower, in violation of both the letter and spirit of civil-service reform; and neither of those eminent spoilsmen could have been so hypocritical in their own defence as is the reformer Lodge. He now pulls a long face, and says that it is necessary for

such legal officers to be men who are in political sympathy with the Administration, since they may at any moment be called upon to "declare its policy." This, of course, is nothing but the old spoilsman's argument, and is just as applicable to a clerk in the Custom-house as it is to counsel to the appraisers. Moreover, if what Lodge says is true, how could he have left in office for four years a counsel not in sympathy with the Administration? He should at once have turned out such a dangerous enemy neck and crop. But he well knows, as everybody knows, that his present pretence is the hollowest of shams. He has simply been caught in the act of swallowing his professed principles, and intriguing to put a protégé in office like any ring politician.

Both Lodge and Secretary Gage have set up the legal defence that Mr. Gibson's office had been "excepted" by President McKinley's order of May 29, 1899, and that so it was fair game for the spoils-seeker. But has Mr. Gage forgotten what he himself said on this very point when defending the President? He maintained that there was a great difference between the "exceptions" made by President Cleveland and those ordered by Mr. McKinley. The former, he declared, made excepted offices not "subject to any civil-service rules," but "the present order [*i. e.*, President McKinley's] makes *all of these excepted places* subject to the sections regarding political activity, and *prohibiting the dismissal of persons for political reasons.*" Accordingly, we have Secretary Gage and the President, at the instance of Lodge and Platt and Hoar (what a combination!), doing precisely the thing which Mr. Gage had asserted would be a violation of the law. No wonder that Lodge is sailing for Europe!

HERMAN GRIMM.

GILBERTSVILLE, N. Y., June 22, 1901.

A few weeks ago, in a letter to the *Nation*, I had the privilege of speaking of Herman Grimm as one of the few living representatives of that sublimated culture of heart and mind which we associate with the great names of classic German literature. Now, as I am dwelling in the seclusion of the woods and hills between the Mohawk and the Susquehanna, there comes to me the message of his death, and with it comes a request from the editor of the *Nation* to say a few words in homage to the spirit so suddenly, though perhaps not unexpectedly, departed.

Three years ago, when his seventieth birthday brought forth many public protestations of regard and appreciation of his life's work, he wrote me: "I am very much surprised to find that, in the eyes of others, my life has had consistency and inner unity. To myself it has seemed all along a series of impulses from without; and nearly everything I have done was the result of some chance suggestion of the moment." The two fundamental qualities of Herman Grimm's nature could not be better formulated than in these own words of his.

What Goethe says of lyric art, that all genuine poetry is poetry of the moment, may indeed be applied to all of Herman Grimm's writings. Whether he speaks of Michelangelo or Homer, of Goethe or Emerson, of Raphael or Dürer, we always feel that he expresses in the first place his own mood, a momentary phase of his own feeling, a state of his mind as determined by certain impressions from without. This it is, I take it, that gives to Herman Grimm's biographical and æsthetic estimates their supreme artistic charm. He had no sympathy with that soulless and spiritless method of literary or artistic research, only too common in our universities to-day, according to which it is the sole office of the critic to dissolve a poet's or artist's work into the various elements of which it may be composed, to detect in it traces of the work of some other artist or author, to discuss its relation to its models, and so forth. Such a method, if applied exclusively or even prevailingly, seemed to Herman Grimm a perversion of the true mission of the critic, which is, to interpret the essential meaning of a work of genius. For this essential meaning, he thought, could be grasped only by letting the work as a whole exert its concentrated force upon the critic's mind, by letting it, as it were, pass through his mind into a new, spiritualized form of existence. This is the way in which he himself approached the works of the masters to the interpretation of which he devoted his life.

As the lyric poet draws inspiration from the moment, and, by reproducing it in his song, gives permanence to it, so Herman Grimm imbued himself with the impressions from great lives and great works of art, and, by giving shape to these impressions, himself produced works of art worthy to stand by the side of the originals from which he had drawn his inspiration. His lectures on Goethe, his books on Michelangelo and Raphael, his essays on Homer, Bettina, or Boecklin, are, therefore, in a most pregnant sense, part of his own self; they are not so much contributions to knowledge (although they are this also) as creations of the imagination; they should be judged by æsthetic rather than by scientific standards. They undoubtedly have the faults of the artistic temper; they are not free from wilfulness and mannerism; they often reveal more clearly the personality of the writer than the subject-matter of which he writes. But they never fail to bring before us some new and striking aspect of the topic under consideration; they never fail to surprise us by some deep intuition; they never fail to give us some new insight into the mysterious working of genius. And who would not prefer to see Dürer or Dante through the eyes of Herman Grimm than through those of an irreproachable and impersonal collector of facts?

We understand, then, why to Herman Grimm himself his life's work may have seemed, at times at least, to have been determined by momentary impressions and impulses rather than by fixed and abiding maxims. But it would be a great mistake to think that this life as a whole had not been guided by a very definite and permanent principle. It is, indeed, impossible to read a page of Herman Grimm witout feeling that the underlying principle of his whole activity was the imperturbable conviction that in scholarly research, in literary and artistic production, in spiritual culture, is to be found the noblest, the most important, the most sacred concern of mankind. In this respect, more than in any other, he was a contemporary, not so much of Bismarck and William II. as of Schiller, of Fichte, of Goethe, and Karl August. Only a few months before his death he wrote to me:

"The more we Germans grow in political and commercial influence, the more necessary it is to remember that we owe all that we are to our spiritual achievements alone. In some circles here the opinion seems prevalent that these spiritual achievements were of secondary importance, were a traditional possession which might be kept without particular effort. I do not say that the Government thinks so; what I say is that a large part of the public is addicted to this belief. More than ever, then, it is to-day the duty of Germans, wherever they live upon this globe, to preserve the spiritual unity of the German race, and to guard it as a priceless jewel."

This was the spirit which impelled his whole literary production. He was a living protest against the common, the matter-of-fact, the unfeeling, the flippant, the sensual, the vulgar; he was a living symbol of all that uplifts, expands, rejoices, purifies, and ennobles. To him the scholar was not a mere hunter for facts, a maker of conjectures, a defender or destroyer of authorities, but the guardian of the human past, the seeker for eternal truths, the interpreter of the universe. To him the artist was not a mere merrymaker and pleasure-giver, but the creator of high ideals, the prophet of a coming golden age, the priest of a religion of humanity. He was himself a priest of this religion—the religion whose one and only tenet Goethe has expressed in the words:

"Was kann der Mensch im Leben mehr gewinnen
Als dass sich Gott-Natur ihm offenbare,
Wie sie das Feste lässt zu Geist zerrinnen,
Wie sie das Geisterzeugte fest bewahre."

Personally, Herman Grimm was a man of commanding presence, and, in his later years, of patriarchal dignity and kindliness, in this respect also preserving the precious heritage of a noble ancestry. Being given over only to ideal pursuits, and keeping constant company with the best spirits of all the ages, he was entirely raised above the pettiness of personal intrigue and malice which has disfigured so many scholars' lives. I well remember a conversation which I had with him six years ago on certain aspects of Berlin university life. When, during the course of the conversation, I could not repress my indignation at the fact that, through certain personal animosities, he had been cut off from election to the Prussian Academy of Sciences, and remarked that this seemed to me a national disgrace, he smiled and said almost gayly: "Oh, no, that is not a national disgrace; it is simply funny *(es ist einfach komisch)*."

Germans, of course, will feel the loss of Herman Grimm most keenly; but Americans also have special reason for mourning him. Seldom have American character and American scenery more sympathetically and truthfully been depicted than in his novel 'Unüberwindliche Mächte.' No foreign writer has understood Emerson as well as he. And even in his last days, when the South African horrors had embittered him against the British, he retained his hopes and sympathies for the Anglo-Saxon beyond the sea. One of his last public acts was a gift to the proposed Germanic Museum at Harvard University. Germany has lost one of her noblest sons, America one of her truest friends.

KUNO FRANCKE.

THE AMHERST ECLIPSE EXPEDITION.—III.

DABOK, SINGKEP, May 6, 1901.

A long chair on a veranda no less than twenty-five feet wide. Outside, a mass of verdure, which, disentangled, is found to consist of clove trees, their polished leaves shining as if freshly varnished, sago palms, wine palms, one brilliant, overarching "flame of the forest"—a tree to match the swift, fiery scarlet of equatorial sunsets—the glow continued in hibiscus shrubbery, and trailing off into the milder gleam of sunny allamander. At the corner a riotous, long-leaved fern climbing bodily to the top of a receptive tree, in no wise disconcerted by its lusty embrace; a cascade of luminous crimson bougainvillea, and, between, a vista of wide white beach, and turquoise-beryl tropical sea, with tall cocoanut palms outlining their lithe trunks and feathery crowns against its almost iridescent shimmer. A thin line of breakers lies lazily along its edge, faint imitation of genuine surf on stormier shores; and across the nearer sands a coolie here and there passes in the sunshine, wheeling the preposterous, creaking, long-handled Chinese barrow, or balancing heavy jars on a bamboo pole across his shoulders. Thatched roofs of the Malay *kampong* show intermittently among unfamiliar greenery. All this is Singkep.

And what and where, pray, is Singkep? asked every individual to whom we began to suggest, in February, that we were sailing for that mysterious bourne to observe an eclipse. Indeed, not one in ten of our friends in Singapore was wiser, though it is distant only a little over a hundred miles from that world-metropolis. But here is located the Amherst College Eclipse Expedition, on one of the multitudinous islands of the Dutch East Indies, in the Lingga Group, where the waters of China Sea are almost ready to join those of the Java Sea, directly in the line of approaching totality, and having at its command, in establishing instruments and making all mechanical preparations, the resources of a prosperous tin company. For most of the available tin ore of the world comes from this region, or from a belt which, beginning in Tasmania, runs through Australia, Flores, Banka, Billiton, Lingga, Singkep, and the Straits of Malacca, to Penang, Johore, and the Malay Peninsula generally. And so, while one looks down from the airy veranda of the manager's house upon the untamed vegetation of the tropics, and the native settlements under their cocoanuts, it is also possible to see a whitish scar in the green, far at the side of the picture—one of the fifteen tin mines which are boring the island at different points. The tin appears to have been brought down from the mountains, by rivers now shrunken, in the form of heavy, black sand, and deposited in rather shallow strata along the banks, not more than thirty or forty feet below the surface. Near the shore and in alluvial lands the accumulation is very rich. Recently it is found that the same floods went onward with their valuable freight, bearing large amounts into the sea, where it now lies in the shoal water not far out from the beach. Tests and experiments as to the best ways of reaching these deposits under water are now in progress.

Other industries, too, flourish upon this bit of equatorial earth; and companies, in the hands of Chinese, for utilizing the gambier growth, and extracting pepper from the forest, employ between five and six thousand coolies. But, though Singkep is only about fifteen miles wide by twenty in length, it abounds in mountains, one or two nearly two thousand feet high, and in heavy, primeval jungle, so that the useful, if humble, inhabitants just named are little in evidence. Apparently one has the island practically to himself. If the tin mines are visited, to be sure, swarms of laborers may be descried running like ants in single file up and down the shallow sides, baskets of ore balanced at the ends of heavy yokes across their shoulders, their enormous flat hats giving the effect of a procession of unusually animated mushrooms. Otherwise, the island has square miles of solitude, monkeys, and crocodiles.

Labor is so cheap in this part of the world that machinery is used only to the extent of a fire-engine for pumping water to wash the richly ored soil. Labor, also, objects strenuously to the employment of any artificial aids to its own brawn. The Dabok River, turned from its native course, is virtually lost, as sluice after sluice conducts its waters to one mine or another—just so much in one place, not too much in a second. The river-bed is dry, but a network of small streams and canals crossed by footbridges leads inevitably to the mines, where the fine, heavy, black grains are being industriously separated from the quartz and clay which originally held them. The first separation occurs when the earth, exactly as it is dug, is thrown into a hurrying stream, and rapidly carried to a small cascade. A coolie intercepts it here with a coarsely woven basket, which catches the larger stones and useless impedimenta. These, thrown out to another human animal waiting, also with baskets, are carried away; while farther down the stream, more coolies, knee-deep in rushing water, hoeing continually at the swirling sand about their feet, allow the lighter stones to be carried away to the slowly filling pond below. Ever richer, and settling more deeply, the sand at the bottom of the sluice, darker now, but even yet mixed with some valueless material, is taken to another stream to be washed and sifted still farther, until the black grains come out by themselves at last, wet and shining, but unmixed. A few bits of gold are often found, but in small quantities. The tin ore, spread in large pans of iron over wood fires, is dried for packing in bags, each a picul—and that is the whole process. Formerly smelting was done here, but the ore is now sent directly to Singapore for subsequent processes, and from there to all the world; and little enough the world in general cares where the material of its tin cans and utensils first saw the light. Singkep alone exports from nine to fifteen thousand piculs yearly.

The coolies in the Singkep mines are not allowed to live in the Chinese *kampong*, among the other villagers, but have ample quarters, not far away, around a sort of court-yard, where the earth is worn hard and smooth by the constant pressure of hundreds of bare feet, and where, at the happy hours of chop-chop, they may all be found perched on benches around high tables, each with his bowl of rice and indescribable vegetables, engaged with long chop-sticks in urging refractory masses and combinations in the way they should go. From six in the morning until eleven they work, and from one until four, and for twenty-six successive days. Then they take four Sundays together. And there might be many a worse coolie-fate than toil in the Singkep tin mines. A few, generally for slight causes, are always in the hospital, a long, open building, where the Chinaman spreads his mat and carries his little box, and waits, perhaps, for some ankle or arm to heal, while he looks stolidly out at life from his inscrutable little eyes, and meditates upon nothing in particular. A pharmacy holds all necessaries for such a community, including an operating-room, with suggestive but clean and simple details. The whole department is presided over by a young physician of Javanese birth, but Dutch education.

Aside from Chinese, the inhabitants of Singkep are chiefly gentle Malays, whose language in the Dutch, as the British, East Indies is the general medium of communication for all nations. Their villages are picturesque to a degree, where tiny brown children play about under the palms, their only danger that a monkey from some lofty tree-top may mischievously aim a cocoanut at their little bobbing heads below, where babies are carried comfortably astride the mother's hip as she strolls off for a bit of gossip, tightly swathed in her gay *sarong*, and where the sloping thatched roofs and open fronts frame many a simple household picture as one passes and gazes into the dusky interior. Many Malays are Mohammedan, in a somewhat deteriorated form, and on Fridays thirty or forty men assemble before a lofty but unornamented building, hardly to be called a mosque, where they pour water over their feet from a cocoanut dipper, remove the tobacco and betel-nut quids from their blackly scarlet mouths, and go in to a few minutes of prostration and genuflection, until nothing can be seen but the soles of sixty or seventy brown feet, and indiscriminate garments in helpless perspective. The old man who beats an ear-splitting and enormous gong to assemble the worshippers, recites a sentence or two from the Koran in bad Arabic singsong, and out they all come, with a pleasing sense of duty done and Deity propitiated for another week. A new betel quid is hastily concocted, and life becomes worth living again.

On the first evening of our arrival, the Sultan of Lingga had sent, for our edification, his especial band, which played a number of popular airs with much spirit, out under the velvety sky, pricked with dazzling stars, while the palms rustled like dry rain, and a full moon flooded the world with singular glory. The personnel of the band is largely Filipino, and the leader was asked if he could play any distinctively American anthem. He disclaimed all knowledge of such melodies. "But you ought to know them," said a Dutch gentleman; "you are American now." "Not yet," replied the little brown man quickly. But when the long, lazy, shining evening was over, the strains of our borrowed "America" followed the closing Dutch anthem—perhaps reluctantly, but with graceful courtesy.

And for the skies of Singkep? Probabilities of clearness were not overwhelming anywhere along the line; careful meteorological observations made by the Dutch authorities at many points showing a large percentage

of cloudiness. And, indeed, in that respect. this is perhaps a bad region for an eclipse to have chosen. But here it planned to come, and here must be next week's scientific Mecca. Masses of cumulus hover around the horizon, occasionally rising and drifting overhead, but now that the southeast monsoon appears to have set in, there is much more sunshine than cloud, and when the sky is clear, it is of wonderful depth and purity. Evenings are surpassingly brilliant. The southern cross, upright on the meridian, burns with splendid intensity, while Canopus and *alpha* and *beta* Centauri form new points in an unfamiliar firmament, and the zodiacal light streams obliquely upward from the ashes of sunset, where a great comet nightly rushes downward in reckless chase after the departing luminary. The moon rises later—and smaller. The next time she starts in on a new career it will be to eclipse the noonday sun at Singkep for six minutes and twenty seconds. The close-creeping jungle whispers mysteriously of what is to come; the palms, the sea, the breeze, all have something to tell, but their oracles are unintelligible to our clumsy ears. And meantime the telescopes are daily in more perfect adjustment, the observers trained, the preparations approaching a focus, and the sun awaits his unprecedented darkening.

MABEL LOOMIS TODD.

FRANÇOIS VILLON.

PARIS, June 1, 1901.

Among recent additions to the collection of "Les Grands Écrivains Français," published by Hachette, small volumes already numerous, I may cite as very instructive that relating to one of the early French poets, François Villon, by M. Gaston Paris of the French Academy, son of Paulin Paris, who published the very interesting edition of Tallemant des Réaux, with numerous notes which make this edition one of the standard documents on the history of the seventeenth century. Paulin Paris and his son Gaston are justly considered great authorities in all that concerns early French literature and the formation of the French language.

The first edition of the poems of François Villon was published in 1489 by the bookseller Pierre Levet. Though full of errors, it had a great success, and from 1489 to 1533 there appeared more than twenty editions, all reproducing the first edition. In 1533 appeared what may be really called the second edition, under the superintendence of the celebrated Clément Marot, who corrected the errors, made very few additions, and tried to render Villon more intelligible, as, in three-quarters of a century, manners and even language had been much modified. This new text revived the popularity of Villon, and there were no less than ten editions of him from 1533 to 1542. After a lapse of two centuries, the bookseller Constelier issued a new edition of Marot. Without speaking of a few others, published with the aid of some original manuscripts of Villon which had been discovered, I will say at once that what may be called the final and definitive text of Villon was published only in 1892, with a biographical and bibliographical introduction, under the title of "Oeuvres Complètes de François Villon," by M. Longnon, a member of the Academy of Inscriptions and Belles-Lettres.

If we know better than our predecessors the text of Villon, we know better also the details of his life. He was born in Paris, and took at the University of Paris the degree of master of arts. His father bore the name of Montcorbier (from a village in Bourbonnais); an uncle of his was a bachelor *en décret*, which means in canon law, and chaplain of the collegiate church of Saint Benoît, near the Sorbonne. This good priest was his adoptive father. In 1431, when the future poet was born, Paris was under the domination of the English. The Duke of Bedford acquired the Louvre. The University of Paris was attached to the cause of Henri VI.; and the Theological Faculty had decided that Joan of Arc deserved to be burned as a heretic and a rebel. The sentiments of the upper classes were not those of the people, and when, thirty years later, Villon celebrated

> "la bonne Lorraine
> Qu'Englois brulerent à Rouan,"

he was in harmony with the people. In 1436 the English had to leave Paris, and Charles VII., King of France, entered it the year after. M. Gaston Paris describes vividly the terrible years which followed 1431, the perpetual struggles between the Armagnacs and the Bourguignons, the misery of the people, the reign of terror in Paris and its neighborhood.

Guillaume Villon took his young nephew into his house and made him attend the lectures of the University.

"The University," says M. Paris, "which was one of the forms, or, if you like, one of the dependencies, of the Church, filled with its pupils all the careers which we now call liberal. The poorest pupil could hope to become either a bishop or a cardinal, either an advocate or a judge at the Châtelet or the Parlements, or to enter into the King's Councils and govern the finances of the State. It was, therefore, natural that, in a poor family, when a child was remarked for his intelligence and his love of work, he should be entered in the University."

The great majority of the pupils stopped, of course, on the way to promotion; they became priests or monks in the innumerable country churches or convents. Many took only the minor orders (which allowed marriage), and became copyists, booksellers, clerks in lawyers' offices. Many, says M. Paris, retaining of their studies only a certain refinement of mind, became mere parasites, if not swindlers or robbers. Such was the fate of Villon. He describes, in one of his ballads, the companions of his Bohemian life:

> "Et les aucuns sont devenus,
> Dieu merci! grands seigneurs et maistres;
> Les autres mendient tous nus,
> Et pain ne voient qu'aux fenestres;
> Les autres sont entrés es cloistres
> De Celestins et de Chartreux."

The University of Paris was a city in itself, with its numerous colleges, its auditories, its churches and convents, the houses where masters and pupils lived. It occupied the whole of the left bank of the river, what is still called the Latin Quarter. Villon was certainly among the most troublesome students of the University, and spent most of his time in the cabarets of the quarter and with the light women who were the worthy companions of the gay members of the University. He became implicated in brawls which were so serious that he had to fly from Paris. After a while he obtained pardon and returned to the University in 1456, but had to fly away again after the commission of a theft. From this time his life became very adventurous. We find him in 1457 at Blois, at the gay and poetical court of Charles d'Orléans (who was, after Villon, the greatest poet of his time). He did not stay long there, and we find him in 1461 in the prison of the castle of Meung-sur-Loire, which was dependent on the Bishop of Orléans. What was his crime? Tradition will have it that he committed a theft in the church of Baccon, near Meung. He recovered his freedom by a mere accident. The King, Charles VII., had just ended his sad existence, and his son Louis, who had been a refugee at the court of the Duke of Burgundy, hastened to return to France. He had been crowned at Reims, and, on his way to Paris, he visited Touraine, the Orléanais, and other provinces; he found himself at Meung at the beginning of October, 1461. According to an old tradition, he pardoned many prisoners on his way, and Villon was one of them. He tells us, in one of his poems, the "Testament," that he was thirty years old at the time; that would mark the year 1431 as the year of his birth.

He returned from Meung directly to Paris; in 1462 we see him again imprisoned at the Châtelet, under an imputation of theft, ill founded this time. He was, however, prosecuted by the Theological Faculty, and, on the 5th of January, 1463, was banished by an order of the Parlement ("en égard à sa mauvaise vie"), for ten years from "la ville, prévôté et vicomté de Paris" (a mode of banishment common at the time, and by which the provinces threw suspicious characters upon each other). We now lose all trace of the poet, who probably died far from Paris before the expiration of his term of exile. M. Paris, while condemning his "mauvaise vie," pleads for him extenuating circumstances.

"During the Hundred Years' War," he says, "especially during its last period, the professions of soldier and of robber were simply one. . . . The horrible wretchedness of Paris and of France during so many years had accustomed all to find means of subsistence as well as they could. . . . Public morality was not better than probity. The Duke of Burgundy made his solemn entry into Paris surrounded by his bastards; Charles VII. had the same honors paid to his 'dame of beauty' as to his Queen, and the Provost of Paris was publicly the protector of the 'folles femmes.'"

The miserable life of Villon inspired him at least with a feeling of compassion for the common people, the sufferers; and, as he was a poet, it inspired him at times with pathetic expressions of humanity. It also gave him opportunities for painting sides of every-day life which now excite our curiosity; he was a Parisian *par excellence* and makes us know better the Paris of his time.

The most original poet must, to a certain extent, be guided by the art of his own time; the lyric form of poetry, as well as the epic form, as they existed in the Middle Ages, had become extinct before the time of Villon. A new and, so to speak, more familiar form of poetry, quite different from that of the troubadours, had been adopted; it admitted only fixed rhythms, the *ballade*, the *rondeau*. The ballade was the most popular; it has probably the most difficult rhythm that can be found. It was composed of three strophes, each containing eight or ten verses of eight or ten syllables, having all the same rhymes and the same refrain, and followed by an "envoi," a mechanical survival of the time when the ballades were really addressed to the Prince of a poetical academy. I cannot give a

better example than the famous ballade of Villon, "des Dames du Temps iadis," or the Ladies of Past Times:

Dictes moy où, n'en quel pays,
Est Flora, la belle Rommaine;
Archipiada, ne Thaïs,
Qui fut sa cousine germaine?
Echo, parlant quand bruyt on maine
Dessus riviere ou sus estan,
Qui beaulté ot trop plus qu'humaine?
Mais où sont les neiges d'antan!

Où est la très sage Helloïs,
Pour qui fut chastré et puis moyne
Pierre Esbaillart à Saint-Denis?
Pour son amour ot cest essoyne.*
Semblablement, où est la royne
Qui commanda que Buridan
Fut gecté en ung sac en Saine?
Mais où sont les neiges d'antan!

La royne Blanche comme lis,
Qui chantoit à voix de seraine;
Berte au grant pié, Bietris, Allis;
Haremburgis qui tint le Maine,
Et Iehanne, la bonne Lorraine,
Qu'Englois brulerent à Rouan;
Où sont elles, Vierge souveraine? . . .
Mais où sont les neiges d'antan!

ENVOI.

Prince, n'enquerez de sepmaine
Où elles sont, ne de cest an,
Que ce refrain ne vous remaine:
Mais où sont les neiges d'antan!

*Misfortune.

Correspondence.

AMERICAN SENTIMENT TOWARDS ENGLAND.

TO THE EDITOR OF THE NATION:

SIR: I suppose that what you say, in a recent editorial article about the readiness of a large portion of our population to stand by and see England crushed is true, but I am inclined to believe that it is not so largely true as it was, say, twenty years ago. The what might be called upper classes in America have as a rule, during that time, with occasional interruptions, been in hearty sympathy with England. Exactly how much that sympathy would amount to if called into active play is a matter of conjecture, but it would perhaps serve as a counterpoise against any hostility among the lower classes—in a really grave crisis.

Some twenty years' observation, however, in the same locality has convinced me that, in Chicago at least, the former rancor and blind hostility against everything English is, if not disappearing, at least giving way to tolerance. It is true that, with a certain part of the Irish population, hatred of England is used as vigorously and persistently as the Bloody Shirt was used by our Republican friends after the war; certain Germans in politics make a comfortable living by the same device; and there is a considerable contingent of Americans who never learn and never forget, the class sometimes facetiously described as having hair on their teeth and voting for Gen. Jackson yet—these can be relied on always for an anti-English vote. Indeed, not long ago the favorite way of showing one's fervent patriotism was to express hatred and contempt for our whilom enemy at all times and on all occasions; but fashions with the *hoi polloi* seem to have changed—it is possible to be a real American nowadays without cursing John Bull. Perhaps the Spaniard has taken his place, and, if a man is really uncomfortable with "patriotism," there are the Tagal and others to subdue. Between Russian tariffs and the nefarious designs of the Germans in South Brazil, the perfervid American can now conjure up enough political hobgoblins to keep him reasonably uncomfortable in foreign politics without bringing in perfidious Albion.

This change of sentiment is shown, perhaps, as well as anywhere among vaudeville audiences, who, as is well known, represent the man in the street, the man who is willing and able to spend 10, 20, or 50 cents to be amused for an hour or so. At such shows there are often references to England; they are more or less facetious, but generally kind, and are well received by the audience. At one such performance that I attended one Saturday afternoon not long ago, among other views thrown on the screen was a moving picture of Queen Victoria in a carriage. The applause that greeted the Queen's appearance on the scene was hearty and continuous. I listened for a hiss, but heard none. So, too, when President McKinley, standing on a platform draped with American, British, and Mexican flags, reviewed the procession on the occasion of the laying of the corner-stone of the new post-office, there was no visible hostility towards the British flag or the British representatives, who were in this case Canadians. It is not so very many years ago that such things would have been impossible in Chicago. Vaudeville managers and politicians know their people pretty well before making experiments with them.

Of course, all this does not imply that the average American would lay down his life in defence of the British empire if in peril, but it might be fairly interpreted as implying a disposition to assume an attitude at least of benevolent neutrality, and not the acute hostility of years ago. The popular opinion seems to be that while John Bull is not admirable in all respects and will bear watching, yet, if the pinch comes, he is a safer man to tie up to than any other fellow we know—keeping one eye on him in the meanwhile.

E. L. M.

CHICAGO, June 20, 1901.

A CORRECTION.

TO THE EDITOR OF THE NATION:

SIR: The very considerate critic of a small book of mine on Chief Justice Marshall in your paper of June 20 inadvertently does injustice to its views on an important subject, in intimating that they deny the power of courts to hold legal enactments invalid as being unconstitutional. Far from it. That great and invaluable doctrine is expressly admitted to be sound as well as "absolutely settled." What is brought into discussion is, the grounds on which it is to be rested, and the principles and discriminations which should control its administration. I should be sorry indeed to have this, which is far the most important thing in the book, misconceived.

JAMES B. THAYER.

CAMBRIDGE, June 23, 1900.

Notes.

M. F. Mansfield & Co. have in a forward state of preparation 'Grant Allen: A Biography,' by Edward Clodd; 'Edgar Allan Poe,' by Prof. James A. Harrison; 'Peeps into *Punch*,' by J. Holt Schooling, with more than 500 representative illustrations; 'Cycling in the Alps,' by C. L. Freestone; 'Bayreuth and Munich,' by Vernon Blackburn; 'Dining in Paris,' by Rowland Strong; and 'Factory Systems,' by Allen Clarke.

'Sport in Europe,' edited by F. G. Aflalo, and profusely illustrated from photographs and from drawings by Archibald Thorburne, is soon to be issued by E. P. Dutton & Co.

For the University of Chicago, Macmillan Company will shortly begin publication of the first of several series of translations and transliterations of "Ancient Records," under the general editorship of President Harper, starting off with 'Ancient Records of Babylonia and Assyria,' in six volumes, three being of translations. Three corresponding volumes will furnish the critical apparatus for these.

Dodd, Mead & Co.'s 'American Book-Prices Current' for 1901 will, in consequence of a growing demand, have an edition of 550 (possibly of 625) instead of 500 copies. If advance orders are numerous enough, a large-paper edition of fifty copies will be furnished.

'The Education of Teachers,' by W. H. Payne, LL.D., Chancellor of the University of Nashville, is in the press of the B. F. Johnson Publishing Company, Richmond, Va.

P. S. King & Son, London, send us Part first (Proper Names, places excepted) of 'Smith's Index to the Leading Articles of the *Times*, for the Five Years Ended December 31, 1900.' This new undertaking purposes to supplement Palmer's and Bailey's indexes. Part II. will deal with places, geographically arranged; Part III. with sources; Part IV. with subjects, logically classified. In the troublesome matter of Mac, Mr. Smith seems capricious. Thus, he arranges M'Adam, Macchiavelli, MacCormack, M'Arthur (why not after M'Adam?), Macdonald, etc.; after a long interval, Maxwell, M'Carty (why not before Macdonald?), McEwan, McKinley "(see M'K)" (why not let him stand?), etc., etc. Half a column is given to the President.

'The International Year-Book, a Compendium of the World's Progress during the Year 1900' (Dodd, Mead & Co.), maintains the standard of the two previous volumes, and aims at improvement as well as some enlargement. The peculiar position of the year, and the events which crowded it, required an increase of space; thus, the Progress of the Century has been attended to by twenty special editors, and receives 76 pages, including 21 of census tables, while the Presidential campaign gets 22. Historical, political, and geographical changes or occurrences are duly noted; China, Great Britain, and the United States are allotted about 20 pages each, France 10, the Transvaal nearly as much, Africa in general, Germany and Austria each 8. Nor are our new possessions (or our national trusts) neglected; 9 pages are devoted to Cuba, 6 to Porto Rico, 5 to the Philippines, and 3 to Hawaii. As before, great pains have been spent upon the sciences, while the arts are not slighted, and biography is much more than merely necrological. Our home universities and colleges get 8 pages, and our Forestry 5. Continental Literature is a department by itself; in that of England and America the aim was "to sketch the tendencies of the year and describe the principal works." Here criticism is naturally freer than in the weightier matters of politics and on such topics as "Christian Science." The character of the book, with its

low price, should command an extensive circulation.

Toplady, author of "Rock of Ages," prefaced his 'Psalms and Hymns,' 1776, by remarking that the Deity "is a God of truth, holiness, and elegance." In a like spirit, Mr. Robert Bridges aims at the reform of our church music. His 'Practical Discourse on Some Principles of Hymn-Singing,' reprinted at Oxford from the *Journal of Theological Studies*, expresses dissatisfaction with the tunes now mostly used, and lays down four principles: "The music must express the words or sense; it should not attract too much attention to itself; it should be dignified; and its reason and use is to heighten religious emotion." As to three of these rules, there will be little or no dispute, but the enforcement of the second would be difficult, if not impossible, since choirs, and probably most people, think much more of the tune than of the words. To remedy this and other modern vices, Mr. Bridges refers to a hymnal of his own compiling, wherein the tunes are chiefly of older date, thirteen being taken from Louis Bourgeois of Geneva (*c.*1550), and nine from the Plain-Song Melodies, Sarum use, while the other chief contributors are Jeremy Clark (1700), Orlando Gibbons, Bach, Tallis, and his coeditor, Prof. H. E. Wooldridge.

Dr. Clarence L. Meader's study on 'The Latin Pronouns Is, Hic, Iste, Ipse' may be called in no small degree an outgrowth of the 'Thesaurus Linguæ Latinæ,' the collection of material for which has been in progress for years, though but two fascicles have as yet left the press. Dr. Meader's object has been to trace the various changes in meaning of the pronouns in question from their first appearance as far downward as possible, giving due attention also to the geographical extent of the change. The work was largely done at Munich, with the continual aid and encouragement of Professor Wölfflin, who published in the *Archiv für Lateinische Lexikographie und Grammatik*, June, 1899, a summary of results so far attained. In 1900 a portion of the work was presented as a thesis for the doctorate in philosophy at the University of Michigan. The prominent feature of the study is the gradual weakening in meaning of the pronouns under discussion, and the encroachment of each upon ground originally covered by some one of tbe others, or upon the functions of the Greek definite article. The conservative nature of Dr. Meader's search for proof of such changes is well illustrated by his careful sifting of the material collected by Hermann Rönsch, in his 'Itala und Vulgata' and elsewhere, on the "Artikelgebrauch von *hic*." Of ninety-three examples cited, all but five are ruthlessly disbarred, and even the five are seriously questioned. Dr. Meader's book is not a sample of the dry and profitless output of statistics for their own sake so frequently met with in current philological study. It comes into vital contact with the underlying principles of language development, and will be read with interest by all advanced students of linguistic expression. The Macmillan Co. are the publishers, though the presswork has been done by the Ann Arbor Printing Co.

Volume 31 of the Transactions and Proceedings of the American Philological Association (1900) has just appeared, from the press of Ginn & Co. Fifteen papers are printed in full, eleven of which were read at the July meeting, Madison, Wisconsin, and the remainder at the special meeting held at Philadelphia in December. Some twenty pages are given to the proceedings of the Philological Association of the Pacific Coast, which has been affiliated with the older organization. This new movement starts with characteristic Western energy, more than seventy persons being recorded as present at the meeting called for its organization. The contents of the volume are too varied in their nature for extended review here. Of special interest to the classical teacher are the papers, "Is There Still a Latin Potential?" by Professor Hale of Chicago, and "The Stipulative Subjunctive in Latin," by Professor Bennett of Ithaca. A peculiar illustration of the continuity of human nature is found in a comparison by Prof. E. T. Merrill of United States census statistics with certain statistical material coming down to us from ancient Rome, showing the tendency of people to report their ages at the nearest multiple of five, rather than the true figure. For instance, in the colored population for 1890 there were 16,000 of the age of fifty-nine, 78,000 of the age of sixty, and 13,000 of the age of sixty-one, taking the figures as reported. In the sepulchral inscriptions of the 'Corpus Inscriptionum Latinarum,' Professor Merrill tells us that there are "for each and every part of the Roman Empire, and for every age from that of twenty or thereabouts upward, precisely the same peculiarities of age groups as in our modern census reports."

The Department of Geology and Natural Resources of Indiana has published its twenty-fifth annual report, setting forth the work accomplished during 1900, and containing papers of economic importance. In the introduction, W. S. Blatchley, the State Geologist, briefly reviews the rapid growth of the clay-manufacturing industry during the last three years, especially in the western part of the State. There raw material of the best quality is plentiful, and overlies the fuel necessary for its burning. The principal field work carried on by the State Geologist and chief assistant was a search for deposits of marl of suitable size and purity to justify the erection of factories for the manufacture of Portland cement. The results of their explorations are embodied in a paper entitled "The Lakes of Northern Indiana and their Associated Marl Deposits," which gives details concerning thirty-two "workable deposits." The descriptions and maps of many of the lakes, and the accounts of their fauna and flora, will be of interest and value to the sportsmen who annually visit these waters, and to the cottagers who spend the summer months in their neighborhood. In the report of the State Supervisor of Natural Gas, it is pointed out that the supply of this fuel is being rapidly exhausted. Many factories in the gas belt have begun the use of other fuels. The State mine inspector reports that 6,357,976 tons of coal were mined in 1900, the largest annual output in the history of the State. The Increase was due to the absence of strikes, and to a steadily growing demand for Indiana coal, largely brought about by the gradual lessening of the supply of natural gas.

So systematic, comprehensive, and impartial a work as Prof. Alfred Rambaud's 'Histoire de la Civilisation Contemporaine en France' (Paris: Armand Colin) well deserved the popularity which, since 1888, has demanded editions till now the sixth is reached. Its three books, as we explained in our first notice, are divided alike for the several phases of national activity, organization, and development, so that each period is readily comparable with another. The first period surveyed is that of the Revolutionary governments (1789-1814); the second, that of governments of restricted suffrage (1841-1848); the third, that of governments of universal suffrage (1848-1900). The third book has, necessarily, in the author's final revision, been the one to undergo serious and extensive rewriting. Altogether, eleven decades of French progress are here admirably revealed for study and for reference. But the purchaser should understand that this is not a history of events. The index, for instance, will be searched in vain for the name Dreyfus or Boulanger. Its rubrics are not personal, but topical. Army, the Blind, Canals, *Chansons*, Darwinism, Lighting, "Électrocution (en Amérique)"—we have the thing, indeed, but the word is not yet fixed—Jury, Metallurgy, Observatories, Hertzian Waves, etc., etc. These examples will show that the author's vision, like the utility of his works, is not bounded by his own country. Valuable are his lists of works to consult.

The editor of the 'Hand-book of British, Continental, and Canadian Universities' (published by Bryn Mawr College) has lately issued the supplement for 1901, which contains important additions and alterations. The hand-book arose from the need felt for a guide that should define the position of the different foreign universities in regard to the admission of women to their courses; but, since its first appearance in 1896, practically all European universities and colleges have been thrown open to women, and so it happens that the majority of the facts collected in the succeeding editions have proved as valuable to men students as to women. 'Minerva,' the German equivalent, does not, of course, cover the same ground as the Bryn Mawr College 'Handbook', which is unique in giving details of expenses and of the steps to be taken by graduate students who desire to study abroad. We note in the new supplement that, under recent rules in German universities, all foreign students, men and women alike, will be obliged to present more formal credentials of a regular college training and degree before admission than have hitherto been necessary. The information as to the special summer schools in France is new. Also, the fact that the hitherto exclusive French School of Archæology at Athens has been thrown open to foreigners, marks an important advance. All the facts given have been collected at first hand from the officials of the institutions described. An appendix supplies a list of all fellowships available for study abroad and open to students of any college or university.

A number of interesting appointments of women to teacherships of one sort or another in mixed colleges have been made this spring—none more interesting than that of Miss Margaret Washburn to a lectureship in psychology at Cornell University. Miss Washburn has already won her spurs as a psychologist of force and originality, and she will be a marked addition to the already strong teaching corps on that subject. She will lecture during the coming year on genetic psychology and social psy-

chology. Meantime the only two universities which still hold to anachronistic views on this subject, Princeton (which has excuses) and the Johns Hopkins (which has none), still debar women from even the humble privilege of sitting at the feet of instructors of the privileged sex.

Among the historical documents published as an appendix to the June Bulletin of the Boston Public Library is an interesting letter to Thomas Jefferson by Philip Mazzei, the agent of Virginia, in which he naïvely describes several interviews with Franklin, in Paris, in 1780, who apparently showed "more philosophy than zeal" in the objects of Mazzei's mission. There is also a letter written from Madrid in 1780 by John Jay to Silas Deane, in which he says (in cipher) "that Spain wanted Mississippi."

The Providence Public Library has published a handsome pamphlet containing the addresses delivered at the opening of its new home, together with a description of the fine building, and a brief sketch of the early history of the library movement in that city. Among several illustrations is a portrait of the late Mr. John Nicholas Brown, one of the Library's largest benefactors.

Any intelligent person desirous of aiding an "inquiry into human sentiment with regard to a future life," either by answers of his own or of other people, should procure the circular ("questionnaire") issued by the Society for Psychical Research. It may be had of Mr. Richard Hodgson, No. 5 Boylston Place, Boston, and may be returned to him or to Mr. F. C. S. Schiller, Corpus Christi College, Oxford. The first question is: "Would you prefer (*a*) to live after 'death' or (*b*) not?"

—Perhaps the most characteristic feature of the new volume of the Proceedings of the Massachusetts Historical Society (second series, vol. xiv.) is the running comment on men and affairs by the President, Mr. Charles Francis Adams. His wide knowledge and pointed criticisms make his matter interesting, whether he is giving a review of current politics or paying his tribute to the memory of a late associate. The most valuable contributions in the volume are the letters presented to the Society by Waldo Story, comprising a series from Marshall, Kent, and Webster addressed to Justice Story. Not only do they mention legal matters, but they are full of references to political questions, and deal with them in an unusually frank spirit. Chancellor Kent is particularly outspoken, describing Jackson as "a detestable, ignorant, reckless, vain, and malignant tyrant," denouncing the "profligate apostasy of Tyler," and bewailing the "corrupt and fanatical age." Chief-Justice Marshall is much more measured in his criticisms, which gives them greater weight. Against Jefferson his attitude is always hostile, and he had every reason to distrust his manœuvres, as nothing would have given the ex-President greater pleasure than to have Marshall stumble. The very balanced expression of this distrust gives an authority to Marshall's views that no partisan outcry could have secured, and his contempt, not unmixed with a regret due to State pride, of his Virginian critics, is overwhelming. Altogether, these letters give a conception of the great judge that heightens his dignity. Mention should also be made of Mr. Hassam's painstaking essay on the Suffolk Registers of Deeds, and the scholarly essays of Dr. De Normandie and James F. Rhodes.

—The American historian is indebted to Mr. B. F. Stevens for many services, and he has now added a new obligation by his reproduction of a most remarkable map. During the British occupation of New York, from 1776 to 1783, the whole island of Manhattan and a material portion of Brooklyn, together with a small part of the Jersey shore adjacent to Paulus Hook, were surveyed, and, on a scale of six and one-half inches to the mile, carefully mapped by the British engineers. When the city was evacuated by the British, this map, intended solely for the use of the English headquarters, was carried to England, where it has lain unknown until discovered in the War Office at London by Mr. Stevens, who now issues a limited edition of one hundred copies, in absolute facsimile, to subscribers only. It is solely by comparison with the maps already known that the value of the present one can be properly appreciated. Hitherto general and local historians have depended on the surveys of Montressor, of Ratzer, and of Holland, all made prior to the beginning of the Revolution, on the Sauthier, issued by Faden in 1777, and on the John Hills map of 1782. All these, save the last, were on so small a scale as to omit most of the topographical features, and what, in a military sense, is most important of all, the by-roads and tracts of timber. The exception, John Hills's map, covering less than a quarter of the island, which tradition tells us was made by a British engineer, and which has been the chief authority of the Revolutionary historian, we now find to be but a sadly imperfect copy of the headquarters map, and to have been the cause of very material errors.

—An example of this is to be found in the map of the island of New York reconstructed by Prof. Johnston for his 'Campaign of 1776,' in which he endeavored to locate all the American intrenchments. In the present map, by the use of three colors, it is shown exactly what works were of American construction, which of these were added to by the British, and which the latter were solely responsible for; and a comparison shows the Johnston map to be seriously in error, for it contains little more than half the actual works thrown up by the Americans—proof, if it were needed, of the danger which lies in wait for the historian who attempts to reconstruct a whole from unrelated fragments. So, too, this map enables us to settle which of the American works were razed by the British, a hitherto much mooted point. Most valuable of all, however, both in a military and antiquarian sense, is the careful mapping of all the by-roads and lanes, of the lands under cultivation, and even of the houses on the island, which is done with a completeness almost ideal; and in this light the map is little less than a revelation, for it enables us, in conjunction with the records of grantees and grantors, practically to locate every farm and every "seat" on the island. Too much praise cannot be given to the manner in which Mr. Stevens presents his historical material, for it is no exaggeration to say that he has set a standard for the reproduction of books, of documents, and of maps which cannot be excelled.

—No more splendid apotheosis of the new American woman has yet been penned than that which appears in the *International Monthly* for June under the signature of Professor Münsterberg. This keen and brilliant critic has told us frankly of our faults; he now shows how warm his appreciation can be when something comes under his view which is in every way admirable: "One group," he says, "always attracts our attention the most keenly—the college-bred woman. There are beautiful and brilliant and clever and energetic women the world over, but the college woman is a new type to us. . . . Even he who is most violently prejudiced is first reconciled and then becomes enthusiastic. He wanders in vain through the colleges to find the repulsive creature he expected, and the funny picture of the German comic papers changes slowly into an enchanting type by Gibson. And when he has made good use of his letters of introduction, and has met these new creations at closer range, has chatted with them before cosey open fires, has danced and bicycled and golfed with them, has seen their clubs and meetings and charities, he finds himself discouragingly word-poor when he endeavors to describe, with his imperfect English, the impression that has been made upon him; he feels that his vocabulary is not sufficiently provided with complimentary epithets." After all these fine words at the beginning of an article, one is prepared to discover that they are merely a prelude to taking everything back. Such is not, however, the case in this instance: Professor Münsterberg's thesis is that what is needed next in this country is a greater proportion of men of the same high type that has now become common among women, in order to make marriage attractive to the latter. The new standard that will inevitably be set for the man who can hope to win to marriage the modern college woman, enamoured of the higher life and freed from the necessity of marrying as a means of support, has received even more serious and weighty treatment at the hands of Mr. Talcott Williams, in a number of the *International Journal of Ethics* a few months ago. This is an article which college women —and all women, in fact—will do well to read.

—While Mr. Arthur Evans is still completing at Old Knossos in Crete the excavations so brilliantly begun more than a twelvemonth since, the London *Times* has recently published his interesting preliminary sketch of the additional portions of the palace of Minos disclosed by his successful second year's campaign. This information, given in the last week of May, together with a popular article contributed by him to *Murray's Monthly Magazine* four months ago, and a painstaking account of last year's excavations contained in the 'Annual of the British School at Athens, 1899-1900,' puts us in the most favorable condition of mind for doing justice to any book which may be forthcoming when the "Labyrinth" at Knossos shall have been completely excavated. Furthermore, Mr. Evans has embodied some of the most curious of his first year's discoveries at Knossos in a most illuminating article on "Mycenæan Tree and Pillar Cult, and its Mediterranean Relations," printed in the last number of the *Journal of Hellenic Studies* (vol. xxi., part 1, 1901). The Egyptian relations of his first year's Knossian discoveries he has treated minutely in a special article published by the Egypt Exploration Fund, and now comes, in volume xxx,

of the *Journal of the Anthropological Institute*, a review of Dr. Murray's 'Excavations in Cyprus (Bequest of Miss E. T. Turner to the British Museum),' in which Mr. Evans brings out in greater detail his conclusions as to the relations between Mycenæan culture and the bronze and stone ages in the Mediterranean basin—conclusions which were sketched by him nearly a year ago in *Nature*, September 27, 1900. Mr. Evans's anticipation that the two acres of the Knossian site uncovered last year would prove to be less than half the area requiring minute exploration, has been literally verified. This year he has uncovered about three acres more, and it is gradually becoming evident that the "Labyrinth" was as much like a miniature city as any one rambling building could be. Here, naturally enough, Egyptian analogies have suggested themselves to him. He has added to his store of linearized pictographic signs by new finds. There are more frescoes—one of them giving a female head with wonderfully fresh coloring. A curious draughtboard, partly of silver, has been unearthed, and, over and above all this, new "magazines," filled with storage jars, of dimensions even huger than those of last year, have been found in very great abundance. Workshops where beautifully wrought stone vessels were found in various stages of completion have appeared, and still the excavations were in progress when Mr. Evans's preliminary account went to press. It is not to be wondered at that these various accounts should have created a great stir in learned circles, and have secured Mr. Evans's election as a fellow of the Royal Society.

—The *Times* of June 14 publishes a letter which must have been cabled from Crete, since it bears date Candia (that is, Knossos), June 12, and which gives us the latest news of this year's excavations. Mr. Evans announces "discoveries which throw an entirely new light on the architecture of Homeric Greece." On the eastern side of the huge central court—the side untouched till now—he has unearthed a suite of princely chambers "with walls descending in places twenty feet, and including the remains of upper stories." In this part of the maze of buildings a portico to the east opens on a forehall with eleven doorways and giving access to the principal hall. "A side passage leads from this to a second hall," Mr. Evans adds. And this second hall shows on two sides "the remains of a double tier of colonnades, within which a triple staircase leads to the upper galleries." This discovery may lead some day to the definitive settlement of various questions still debated regarding the houses of Menelaus and Odysseus. But more richness still remains in store, for in this hall was a large deposit of tablets with prehistoric inscriptions—"one larger than any yet discovered, and apparently containing a list of officials." Last, but not of least interest, are the specimens of intrinsically beautiful art yielded by this second campaign of excavation at Knossos. In the chamber adjoining the great hall where so many inscriptions turned up, were fallen fragments described by Mr. Evans as "of human figures of colored plaster in high relief and of most magnificent execution, the rendering of veins and muscles showing a skill never again rivalled till the Italian Renaissance." There is also an adjoining gallery, where remains were found of bull-hunting scenes in which girls attired like cow-boys figure as well as men. Add to these scenes the extraordinary figure of the Mino-calf—it was not the Minotaur full-grown—described by Mr. Evans in his letter of May 16 (alluded to above as published in the *Times*), and we have an interesting new chapter in art-history newly opened before us. It is indeed noticeable that the most interesting finds have been made just where Mr. Evans expected to unearth them.

HISTORICAL FICTION.

The Helmet of Navarre. By Bertha Runkle. The Century Co.

The Crisis. By Winston Churchill. The Macmillan Co.

A Maryland Manor. By Frederic Emory. Frederick A. Stokes Co.

Henry Bourland: The Passing of the Cavalier. By Albert Elmer Hancock. The Macmillan Co.

Miss Runkle's method of writing historical romance is neither the best nor the worst, but it is easy all around, for the author, the reader, and the critic. History, in 'The Helmet of Navarre,' is, compared with romance, a negligible quantity. The moment chosen is unquestionably historical, and was a critical one for France. The Duke de Mayenne, surviving chief of the Catholic League, still held Paris, and the army of Henry of Navarre lay at St. Denis, the leader not yet quite certain that political expediency demanded his renunciation of the Protestant faith. In a judiciously worded paragraph, the author places the ignorant *en rapport* with the actual situation, then embarks on a tale of exciting, romantic, and flagrantly fictitious adventure, chiefly conducted by Félix Broux, a youth of wonderful activity and resource, and a faithful servant of the noble family of St. Quentin. There is no need to particularize his exploits; from first to last they are perilous in an ascending scale, and on reflection they are wholly improbable, even in Paris at the end of the sixteenth century, when everybody was killing or being killed, and only the future heroes of historical romances, having as many lives as a cat, escaped with one of them. But the judgment of reflection is not a fair judgment to apply to a kind of romance for which the impression of the moment means life or death. Miss Runkle conspicuously avoids a bid for reflection. She takes no side in the political and religious strife which had exhausted and disintegrated France. The famous *panache blanc* serves for a title, but the reader is not agitated by the sorrows, cares, and scruples of the King who wore it. The strictly feudal basis of society is taken for granted, and no arguments about the right or wrong of that condition are invited. None of the persons introduced are complex; they are chosen for action only; each provided with one passion, vigorous and lasting enough to achieve an appointed end. Miss Runkle has that end pretty steadily in view, and conceals its insignificance by triumphant conquest of a variety of dragons in the path.

There is a great deal of public attention, unfamiliar with Dumas, waiting to be captured at odd hours, and willing to mention with approval the book that has filled the hour. It is this mouth-to-mouth, unthinking praise that makes the fortune of a tale; and unhappily for serious fiction (more unhappily for its authors) it can never get such praise. The harm done by the very popular sort of romance of which Miss Runkle's is an excellent specimen has, we think, become the bogie of persons who write, or who prefer to read, another sort. The day may dawn when the multitude will regard fiction as the most sacred form of literature to which the mind of man has ever been or can ever be dedicated. But that golden hour has not yet struck, and in the meantime we are disposed to look upon the immense sales of historical romances, well printed, well illustrated, prettily bound, as a direct testimony to the growth of the intelligence of a great democracy. Twenty years ago the masses were reading badly printed unbound romances, narrating the loves of wicked lords and virtuous seamstresses (presumably contemporary), or of plain Americans, ludicrously didactic, insufferably dull. Curiosity about the past, however trivial, is an intellectual advance on apathetic satisfaction with the present; and delight in even a partial representation of society as it may have been is less prejudicial to character than is delight in representations of society (presumably contemporary) that excite grotesque if not vicious illusions about what can be done with the life we have to live. The ideals inculcated by the authors of these historical romances are not generally evil, for the most dreadful of deeds is often prompted by a sentiment of traditional obligation, and there is constant insistence on the virtue of a courage that compels a ready and even cheerful sacrifice of one's life for the love of country or leader, or for the sake of private honor. Miss Runkle's book abounds in such ideals; but seeing, as we have said, that she stands firmly on a feudal basis, she expresses them in images not democratic, distinctly un-American. Fortunately, the ideals implanted in youth have a way of detaching themselves from the circumstances through which they reached the imagination, and sometimes they abide with us to become controlling principles. The desperate deeds of Félix Broux will be forgotten, but may not his notions of loyalty to the hand that fed him, and of devout reverence for his betters, survive in the breast of a good citizen of a free republic—to make him better? If the people had ever loudly clamored for serious fiction and were now plainly degenerate, the situation would be gloomy indeed, but that is not the case; so the optimist has clearly a right to enjoy the pleasures of hope and cheerful prediction.

Few are the writers of historical fiction who, trying for more than a consecutive narrative of picturesque adventure, trying for significant character and genuine emotion, have won wide popularity. Nature is too chary of the necessary endowment. When ambition soars still higher, reaching towards reproduction of national passions that are dead, towards representation of a social order that has passed away, the best that experience hopes for is respectable failure. Mr. Winston Churchill is in a position to laugh at experience, for his novel, 'The Crisis,' considered as an expression of that passionate emotion which stirred the South to war, and as a picture of social conditions which the war destroyed, is almost an unqualified success. The first page of 'The Crisis' announces sharply the presence of

the literary gift, the gift for saying things, no matter what, in a memorable way. In the first book (there are three) a large plan is projected with some important detail emphasized. The fortunes of a group are to be involved in the fate of a nation, and private interests used to present a great historical drama and interpret its meaning for a new generation. This plan can hardly be said to have been deliberately thought out, but its essence appears to have been grasped by a creative imagination which fuses individual character and conduct with affairs of absorbing public interest, reveals the profound emotion of the period, and rouses the reader to warmly sympathetic response.

Mr. Churchill's method is the method of the greater imaginative writers. It is creative, not analytical. He spends little time on examination of the inner man, and has perhaps a too open scorn for psychology. He does not embark on formal argument about the political and social questions of the period; but they are passionately discussed through the actors and action. An early chapter which describes an auction of slaves in St. Louis, puts conclusively the whole human argument against slavery. Here Mr. Stephen Brice of Boston, conservative, not impetuous, regarding coldly persons of extreme views, abolitionists, faces for the first time, violently, the peculiar Southern institution. His behavior is observed, remembered, by Col. Carvel, whose own untroubled belief is that "the black race, sir, is kept in subjection by divine decree." When it appears that the absoluteness of divine decree is about to be rudely questioned, the Colonel makes answer, slowly, sweetly, to the excited utterances of his friend, the Judge:

"I reckon we're going to have war, Silas, but don't you think that your Mr. Lincoln scares me into that belief. No, sirree! It's this youngster who comes out here from Boston and buys a nigger with all the money he's got in the world."

The youngster from Boston shares hero's honors with Clarence Colfax of St. Louis, Col. Carvel's nephew, and lover of the Colonel's charming daughter, Virginia. As one typifies the moral passion and the resolve to preserve the Union which carried the North to victory, so the other typifies that personal passion, that infatuated attachment to a narrow view, which led the South to fight to the death. The individual is, however, not sunk in the type, but remains in the memory for himself and for the qualities that divided Virginia Carvel's heart against itself. By portraying types, Mr. Churchill has revived the old-time social and domestic life of the South; and by selecting persons of positive character, persons who have spirit or intelligence or passion, and who use their qualities for good or evil, he convinces us that they all lived, loved, and suffered in St. Louis forty years ago.

In the detail of construction, in the avoiding of commonplace artifices, and the preference of natural to sensational solutions, Mr. Churchill shows the instinct of the greater novelists. The only chapter in which this instinct quite fails is that where Judge Whipple, on his death-bed, delivers fierce orations to the friends and enemies who have dropped in to see him die. For manner and style Mr. Churchill draws freely from Thackeray, and occasionally one regrets this, because Mr. Churchill is never so fine as Thackeray at his best, though one cheerfuly adds that he is often better than Thackeray below his best. And he is always better than any of the novelists from the North or from the South who have dealt at length with the causes and conduct of the civil war.

It is a positive misfortune for two other novelists that their books should appear at such a moment as inevitably to invite comparison with Mr. Churchill's. The action of 'A Maryland Manor' and of 'Henry Bourland' runs through the same years as that of 'The Crisis,' in very similar scenes. Both are particularly devoted to description of the Southern aristocracy's condition before the war and after. These descriptions are extravagantly improbable. There never were sane aristocrats anywhere who sat aloof from life, communing with portraits of ancestors, and who found perpetual excitement in the exchange of stilted congratulations on their own greatness. One feels and knows that Colonel Carvel, in 'The Crisis,' was a gentleman, yet he conducted a dry-goods business, habitually wore his hat in the house, took his ease with his feet on the mantlepiece, and said vigorous things in the Southern vernacular. Next to the aristocracy, these authors give their attention to politics, and, indeed, Mr. Hancock's avowed object is to discuss "the passing of the Cavalier." Here both are more sensible and probable. The mistake of each is that he has written a novel for the purpose of imparting information and expressing views—an experiment that never comes off brilliantly. It must, however, be said for Mr. Hancock that he is less soporific than Mr. Emory, and that some accounts of the methods of carpet-baggers and of the negro in the act of governing have an excellent vivacity. Moreover, he handles the passion of love without gloves, tears it to tatters. His grammar is not dictated by convention, and his expression is often lurid. If his conception of Mr. Bourland's state of mind when he learns that his wife has narrowly escaped assault by a negro is at all true, the lynchings in the South are explained. Mr. Bourland sees the incident retrospectively in his mind's eye, and feels "the ferocity of a brute driven to bay"; and this ferocity "dominated him like the delirium tremens. The maddening spectacle branded his brain fibre, and as he brooded upon it his blood began to swell, to distend the veins, to scald his muscles, to cauterize the ends of his nerves," and the result of such extraordinary disturbance of his blood was, that "he lost the restraining conscience of a civilized man; he became a stalking rage." Against a score or so of "stalking rages," what avail a conscientious sheriff and the most judiciously selected posse? Mr. Hancock, if he continue to write romance, should glance at a treatise on the distinction between violence and strength in expression.

LADY DILKE'S FRENCH ARCHITECTS.

French Architects and Sculptors of the Eighteenth Century. By Lady Dilke. London: George Bell & Sons; New York: The Macmillan Co. Pp. xvii, 217.

It is more than two years since the appearance of Lady Dilke's book on the French painters who flourished between the dull old age of Louis XIV., during which little was produced, and the Revolution. The general history of the fine arts of the time is continued in the present volume, and we are promised a third, which shall still further develop this history by giving the much-needed record of the decorative arts of the time, including the interior beautifying of buildings. Nothing is said of prints, the art of the engraver for reproduction in black and white, or in color. There are many who will regret the omission. There are many who will almost resent the division of what they consider to be architecture into two parts, separated by all the space there is between two volumes, and seeing also what they consider sculpture parted in two by a breach not less wide. The sculpture of heroic size and of national or general sentiment is one and indivisible with the sculpture which is more minute and more strictly decorative; nor is there any such distinction between the cast and chased bronze on the one hand and the embossed and chased gold on the other; no such distinction between the wrought marble in the one case and the carved ivory in the other; no such distinction between the terra-cotta portrait bust, which is admitted to this volume, and the biscuit figures, white and painted, which apparently are reserved for another occasion.

With regret one has to say that Lady Dilke is writing for an English public, a public which has not yet learned the lesson so familiar to everybody who has studied in the French school—the lesson that, even as architecture consists as much in the painting and polished woodwork of the inside facing as in the carved white stone of the exterior, so the sculpture of the public monument and the private portrait cannot properly be considered apart from the sculpture of the decorative panel and the patch-box. The authoress would have done the world of English readers a great service if she had helped forward that return to intelligent views of the fine arts which is indicated above, instead of striving against it by classing together what Walter Scott would have called the big-bow-wow art in the present volume, and separating from it the gentle and less aggressive art of the drawing-room and the boudoir which we are told is to be given us hereafter. The art of the medallist alone is united, as of course it should be, with that of sculpture in the larger sense. In this, however, the present volume is again to be complained of in that the treatment of that important subject is so very brief. All the medallists of the eighteenth century are dismissed in eleven pages. But, indeed, the book is not very large; if the medallists have so little space, the architects have only four times as much, and the "sculptors" only a hundred pages.

Complaint and disapproval must cease with the above paragraph. In other respects there is nothing to be said of this book which is not laudatory. If there are exceptions to be taken to Lady Dilke's treatment of her subject, they are of such minor importance that even mention of them would be disproportionate to the length of this notice. The architecture of the time, which has been generally disregarded by writers upon fine art, and by the promoters of those large and costly books of architectural subject with which the modern market is filled, and the sculpture which is dismissed with a patronizing sniff as work of the degenerates, are treated in this book as if an intelligent Frenchman, one thoroughly in touch with the more liberal and the more truly critical spirit of the last few years, had

written it. The catalogues are full of the titles of valuable books on the Renaissance and of course of the Mediæval styles, both of architecture and of sculpture. The progress of art from the eleventh to the fifteenth century, and the extraordinary change in its spirit dating from that time, have been discussed in elaborate fashion, even the English press contributing rather freely to that investigation; but the books which deal with the fine art of the eighteenth century, or even that of the years from the close of the Renaissance proper to the French Revolution, can be enumerated on the fingers of your hand, and their titles carried easily in the memory. Even the guide-books fail to tell you much about the admirable buildings of these later times. The two-fold assumption that these were times of decadence and that the decadence is necessarily an evil time, has been the cost of infinite confusion and erroneous impressions concerning fine art. There is at one time a visible deterioration in good taste and a certain willing acceptance of almost grotesque forms in decoration; but even this, bad as it is, is fully counterbalanced by the gain in originality, in the familiarity with which the classical traditions are handled without being handled rashly, and by the successful attempt to reconcile the statelier arts of a past heroic time with the more domestic manners and more familiar requirements of the eighteenth century. All these facts are well brought to the notice of the reader in the book we are considering.

It is a little hard to explain to one's self the thorough knowledge of the architectural conditions of the time shown by the writer. The fashion in which those powerful and intelligent men of Louis Fifteenth's time, Robert de Cotte and Jacques-Ange Gabriel, delivered the fine art of architecture from the evil influence of Louis Fourteenth's grandiose epoch—the admirable designing of the colonnade of the Grand Trianon, the gallery of the Hôtel de Toulouse, the Hôtel Soubise, the Place Royal (now Place Stanislas) at Nancy, the Petit Trianon, complete within itself, the Military School back of the Champ de Mars, and the noble buildings on the north side of the Place de la Concorde in Paris—all this work, its significance and its peculiar value as putting an end to the mischievous influences tending to deaden and destroy whatever was great and original in French art, is as well expressed in these pages as could be done in so little space. It is hard to understand how even a man devoted to the study of architecture as an exclusive pursuit could have done better with the number of pages allowed. Even the modicum of praise to be awarded to such simple and in a sense expressionless buildings as the Hôtel Roger and the great Mint on the Quai Conti is rather shrewdly portioned out to them, and the feebleness of their style—their essential thinness and lack of interest—is hinted at without too great severity. In fact, this slender book on the external architecture of the time—forty-four quarto pages, with sixteen photographic plates—is as important as any piece of architectural history of our time.

As to the sculpture of the eighteenth century, much of it has inevitably a certain repulsion for the student whose familiarity with the lofty if somewhat chilling spirit of the academic French sculpture, or with the bold idealism of Rodin—embodying, in pose and in grouping and in modelling which seems absolutely realistic, as much of universal truth as the work of the Greeks themselves—gives him a kind of impatience with less serious-minded work. Even such powerful work as the Mercury of Pigalle, even such truly ideal portraiture as that of Houdon and of Pajou, even such graceful designing in pure form as that of Bouchardon fails to attract the attention of our contemporaries. People will not believe that the artist who modelled those fantastical terracottas in which little fauns and nymphs dance with tambourines, is capable of great work; and yet there is the seated portrait of Montesquieu in the building of the Institute, showing in nothing but the curiously crumpled drapery any of that mannerism which we are inclined to ascribe without further question to Clodion. The modeller of that famous clock supported by the three Graces—the clock *qui montre tout, l'heure exceptée*—is hardly recognized as the same man who dared greatly in putting up the equestrian statue of Peter the Great at St. Petersburg. As for the manly works of Coustou the elder and Coustou the younger, it is the fashion of foreigners in France to pass them by as decorative statues meant for parks and gardens, but not meant for the study of the refined art student who is presumed to be familiar with Greek work; but they are none the less precious for that, and the adornments of the Potsdam Palace, the Choir of Sens, and the entrance to the Champs Élysées are as good as if they were not always on view and to be seen without fee or reward. All of this is admirably well put by the critic we are criticising, although indeed she would rather claim the name of an historian than that of a critic. One is greatly pleased by the frank statement in the preface that her object has been to "trace the traditions by which . . . these men were guided; to give such an account of their lives as may render them something more than mere names to us; to bring order into our conception of their works; and to support the conclusions of the text by typical illustrations of their performance." It appears that this plan carried out in her volume on the French painters has been so far successful that the book "has many readers and a considerable sale," while the somewhat different plan followed in another work has resulted in a business failure. Certainly a large sale is no adequate measure of the value of a book on the history of the fine arts; but, other things being equal, that book which will sell is the more useful book.

The History of the People of the Netherlands. By Petrus Johannes Blok. Part III. The War with Spain. Translated by Ruth Putnam. With maps. G. P. Putnam's Sons. 1900.

We wish to give Professor Blok's third volume greater prominence than we have accorded the preceding parts of the work, for when he reaches 1568 he draws near the classical age of Netherland history. The mediæval and Burgundian periods are for students, but in this country Motley has made the Dutch struggle against Spain a subject known to every one who reads at all. What value, we ask, does the series which, beginning with 'The Rise of the Dutch Republic' and ending with 'John of Barneveld,' have in the eyes of a modern critical historian, himself a Dutchman and a professor at Leyden? There are two possible ways of answering such a question—first, by comparing the views which the respective authors hold concerning a number of test cases, and, secondly, by examining any remarks which the later historian makes upon the earlier one. Had we unlimited space at command, the former process would be the more interesting, and it is rendered quite possible by a certain correspondence of the two works in point of time. Motley, of course, for his chosen era is enormously more detailed, but Professor Blok's third volume runs almost parallel with Motley's whole series. While the proportions are different, the leading topics vary little from each other.

For the sake of briefness, we shall attempt to reach the same result by stating the nature of Professor Blok's references to Motley. There are several of these in the preface and in the bibliography with which the book closes. Perhaps we shall best indicate the tone of such criticism as is passed when we say that Motley and Schiller are spoken of in the same breath:

"General interest was aroused by Schiller's enthusiastic pæan on the Netherland struggle for freedom, still more by Motley's fascinating painting of so many beautiful pictures from the 'trial between oppression and freedom.' But the work of these great word-artists entrances the reader rather than convinces him of the justice of their representations. Sound criticism based upon comprehensive knowledge of the sources did not come into being until the middle of the nineteenth century with Bakhuizen van der Brink."

Motley certainly set out to be something more than a "great word-artist," and a good many readers whose sympathies have been stirred by his tale of desperate sieges and hard-won victories, will hear with regret that the justice of his representations is unconvincing to a Dutch specialist.

The immense activity of Dutch and Belgian historians during the last forty years is well reflected in Professor Blok's preface, but even better in his bibliographical analysis. The leader among recent writers, whether one considers learning, "robust impartiality," or style, is Fruin, whose articles in *De Gids*, in the *Bijdragen*, and similar publications, lead up to his masterpiece 'Tien Jaren.' Professor Blok places it beside De Groot's 'Annales et Historiæ' and Hooft's 'Nederlandsche Historien' when naming the three best histories which have yet been written in the Low Country. In addition to Fruin, several good writers on both sides, Catholic and Protestant, have come to the front since Motley's day. Among the Protestants may be mentioned Arend. Van Rees, Brill, Van Vloten, Wijnne, and P. L. Muller; among Catholics, Kervijn de Lettenhove (whose 'Relations Politiques des Pays-Bas et de l'Angleterre sous le règne de Philippe II.' made him known as an editor, and whose 'Les Huguenots et les Gueux' is a study of great value), and Nuyens, author of a comprehensive history of the Netherlands during the sixteenth century. The time has come when another talented American might fitly devote twenty or thirty years to studying and writing the history, not only of the northern provinces down to the end of the Truce, but of the whole Eighty Years' War. A large amount of new material has accumulated, and there are many good monographs which point the way.

Professor Blok cannot be styled in any sense a rival of Motley, for he gives only

one page to Motley's ten, and he furnishes bare results instead of showing the processes by which they have been reached. In one hundred and fifty pages he sums up those complicated changes which fill out the three volumes of the 'Rise of the Dutch Republic.' His style is cool and self-contained. Alva does not stir him to reprobation, nor William to a strain of epic eulogy. Motley, in a poetic and touching passage, describes the Prince's murder and the popular grief which followed it:

"He went through life bearing the load of a people's sorrows upon his shoulders, with a smiling face. Their name was the last word upon his lips, save the simple affirmative with which the soldier who had been battling for the right all his lifetime, commended his soul in dying 'to his great captain, Christ.' The people were grateful and affectionate, for they trusted the character of their 'Father William,' and not all the clouds which calumny could collect ever dimmed to their eyes the radiance of that lofty mind to which they were ever accustomed, in their darkest calamities, to look for light. As long as he lived he was the guiding star of a whole brave nation, and when he died the little children cried in the streets."

Professor Blok uses the same occasion for calmer and more subdued praise:

"His distinguished statesmanship, his indomitable energy, his unbroken courage and firm confidence in the justice of the cause, his broad ideas about the so narrowly understood ideas of religion and of conscience, his unstinted zeal for popular liberty and self-government, give him title to the admiring homage of posterity, as he received the warm admiration and devoted love of so many who honored him in his life as the father of the fatherland, 'the man free from his own profit, always seeking a common weal,' giving himself no time for repose."

Speaking broadly, we have found Professor Blok's description of the war for independence less impressive than might have been expected, but his chapters on Indian commerce and the domestic feuds which fall within the Truce, 1609-1621, awaken no sense of disappointment. We pass by his lucid description of the government which was adopted by the United Netherlands, to notice briefly his attitude towards the Arminian controversy and the execution of Oldenbarneveldt.

The theological difference between Arminians and Gomarists, Remonstrants and Contra-Remonstrants, was only one cause of the crisis in Church and State. Arminius himself had been dead more than seven years when the trouble blazed out at its fiercest, towards the end of 1616. Politics had been hopelessly intermixed with theology, and Maurice told his stepmother, Louise de Coligny, that the question could not be settled without civil war. The Stadtholder, who, unlike his father, had no sympathy with liberal thought, represented the governments of all the provinces except Holland, the majority in the States-General, the army, and even the popular majority in Holland and Utrecht. The Advocate had no sure support outside the ruling class in Holland; yet his defence of Holland's claim to be the predominant partner could not be easily overcome. He was beaten, "but not without Maurice's sword being laid in the balance, and not without violent disturbances, which shook the state to its foundations." When it comes to the Dordrecht Assembly of November, 1618, which was invested by the States-General with the powers of a court, Professor Blok calls attention to the unfairness of the procedure. "Bogerman, the President of the Assembly, delivered a speech full of contumely, attacking the Arminians as liars and traitors. 'With a lie did you begin, and you end with a lie,' he said to them in Latin. 'You are not worthy to be treated further by the synod. You are dismissed. Go hence!'" Oldenbarneveldt might have escaped the death-sentence by showing a little willingness to compromise. His death was a "judicial murder," "an atrocious execution." He was the greatest statesman Holland has ever had.

Professor Blok's third volume may be commended for its erudition and studious avoidance of unfair pleading, though it is somewhat deficient in vigor. "The aim of this work," he says, "is to attain the impartiality whereof our Fruin has given us the example, and which chiefly consists in trying to free one's self from all prejudice, both in politics and theology." He has consistently kept this standard in sight. For English readers his history becomes, through Miss Putnam's translation, a necessary supplement to Motley. The next volume covers the period of the Thirty Years' War.

An American Engineer in China. By William Barclay Parsons. McClure, Phillips & Co.

The retainer of an American syndicate to examine, survey, and report on a great railway enterprise makes his report to the general public in this engaging volume, which has a map, index, and illustrations. It gives us a view of China from the inside by one who is master of his subject, and all the more so in that he has studied thoroughly one particular phase of China's problem. Mr. Parsons does not believe that China has the large population usually ascribed to the eighteen provinces. His opinion is that 200,000,000 or 250,000,000 would be nearer reality. The people are for the most part congested in the valleys, or on the soil already fertile or capable of easily being made so. There are large portions of the less desirable and more mountainous regions of China which can be tilled and made to support human life, if only the means of communication be at hand. The development of mineral resources and diversity of industries will relieve this overcrowding, and more truly enable the Chinese to replenish and subdue their part of the earth.

In all things the Chinese show patience, and even skill when their static, rather than dynamic, energies are called forth, but they are singularly defective in both the conceptions and energies of which movement is the first principle. There seems to be no economy, or any notion of it, concerning things which have to be moved, whether these be the human body or any of the necessities or luxuries of life, whether ore, fuel, food, or water. The introduction of practicable means of communication will at once increase China's wealth through the interchange of commodities, and more healthfully distribute the population. More than this, it will be a powerful intellectual stimulus in relieving the stagnation of ideas.

Mr. Parsons, through his experiences and studies in China, has become very much of an optimist. He believes that, contrary to the general supposition, Asiatics enjoy movement and travel, and that railways in the Middle Kingdom will be well patronized. He fortifies his arguments by comparing the experiences of India and Japan. He sees in China two great divisions of humanity; one is the people in mass, the other is the mandarin or ruling class. So long as the people remain in congestion and isolation, China will have no real unity and no government, in the sense in which we understand that term. But when China has a new nervous system, and a more healthy circulation, when the common people can move about quickly and easily and thus compare ideas, they will become more progressive. The system of official thieving and squeezing, which is the bane of China, will then be broken up. Mr. Parsons sneers at the idea of any "yellow peril." Such a thing as Europe's being overrun by the Chinese might have happened when the Oriental hordes were opposed by forces of men but little better armed than themselves, but in our days force in numbers no longer counts. Modern mechanical appliances in war and transportation have almost obliterated the value of disproportion in numbers. The only way in which the yellow races can conquer the world, either commercially or actually, will be by peacefully developing a higher civilization, as the Western world has done.

As nowadays we are more interested in the future of China than in its past, many readers will turn first to the author's chapter on "China in the Twentieth Century." In this the burden of the author's plea is that, before any regeneration of China can take place, the present official class and its method of governing must go, and a thoroughly extended system of modern education come in. The real cause of the trouble in China is that the literary and governing body of men are, towards progress, as owls and bats. Nevertheless, they see in the coming of science and education their doom. The author believes that China is "full of" native men of intelligence and liberal education, and against these in the long run corrupt officialism can no more stand than can the darkness of night prevent the coming dawn.

The causes which have produced such prolonged national weakness and deadness lie in China's exclusiveness. The Chinese have produced great things for their own use and not for exchange with other peoples. Our engineer breaks out in admiration at the arches, the bridges, the edifices, and many of the methods and products of Chinese, even in the far interior. He gives no single nostrum for the curing of the complication of diseases from which this biggest of the sick men on the world's hospital list is suffering. He considers rather that deficiency in moral sense, and failure to appreciate the benefit of railways or of unrestricted commerce, are effects more than causes. He thinks that no single one of the reforms urged will suffice, but that all together must work for the making of that new China which he believes is possible. His economic judgments, modestly set forth, are based on intelligent knowledge of Chinese finances, which he considers, when honestly administered, to be ample both for political administration and for industrial developments. His handling of the monetary and physical side of his subject shows that he has critically examined and digested statistics, some of which he gives in his text. That part of China most fully described by him from experience is "the closed province" of Hu-nan. It may be safely said that of the recent books of smaller size on the country now under the world's scrutiny and

dissection, this is one of the very best both in information, suggestion, and insight. There is a tone of cheer throughout the whole of it.

The Life of the Bee. By Maurice Maeterlinck. Translated by Alfred Sutro. Dodd, Mead & Co. 1901. 8vo, pp. 427.

This is a charming little work, in which the various phases in the life cycle of the honey-bee are used as pegs upon which to hang a series of interesting essays on instinct, development, evolution, and similar topics. The practical bee-keeper will be disappointed if he buys the book to gain additional information concerning his business; but unless he is hopelessly commonplace, he will learn from it to know his bees better, and to respect them as intelligent communities, rather than mere automata to be exploited for his personal advantage. This, indeed, is the keynote of the work: "I wish to speak of the bees very simply, as one speaks of a subject one knows and loves to those who know it not." In adhering to this purpose, the author has written a book that may be read with interest and profit, even by one who has had no previous knowledge of the subject. He refers briefly to some earlier writers, and not always with approval. Thus, of Büchner's treatise he says: "I suspect him of never having left his library, never having set forth himself to question his heroines. . . . The book smells not of the bee or its honey." This certainly cannot be urged against Maeterlinck, who treats in order "all the great episodes, viz., the formation and departure of the swarm, the foundation of the new city, the birth, combat, and nuptial flight of the young queens, the massacre of the males, and, finally, the return sleep of winter." Even the sting of the insect is not neglected; it is said to produce "a pain so characteristic that one knows not wherewith to compare it—a kind of destroying dryness, a flame of the desert rushing over the wounded limb, as though these daughters of the sun had distilled a dazzling poison from their father's angry rays, in order more effectively to defend the treasure they gather from his beneficent hours."

The bee is pictured as an essentially social creature, who will die if removed from her companions, even if all other surroundings are favorable. "This craving [for society] will help to explain the spirit of the laws of the hive. For in them the individual is nothing, her existence conditional only, and herself, for one indifferent moment, a winged organ in the race." This "spirit of the hive" plays an important part in Mr. Maeterlinck's explanation of the social economy of the honey-bee, and dominates the acts of the community absolutely. Yet it does not exclude individuality altogether, and really requires intelligent coöperation.

"But what have we to do, some will ask, with the intelligence of the bees? What concern is it of ours whether this be a little less or a little more? Why weigh, with such infinite care, a minute fragment of almost invisible matter as though it were a fluid whereon depended the destiny of man? I hold, and exaggerate nothing, that our interest herein is of the most considerable. The discovery of a sign of true intellect outside ourselves procures us something of the emotion Robinson Crusoe felt when he saw the imprint of a human foot on the sandy beach of the island. We seem less solitary than we had believed. And indeed, in our endeavor to understand the intellect of the bees, we are studying in them that which is most precious in our own substance; an atom of the extraordinary matter which possesses, wherever it attach itself, the magnificent power of transfiguring blind necessity, of organizing, embellishing, and multiplying life; and, most striking of all, of holding in suspense the obstinate force of death, and the mighty, irresponsible wave that wraps almost all that exists in an eternal unconsciousness."

"Were we sole possessors of the particle of matter that, when maintained in a special condition of flower or incandescence, we term the intellect, we should to some extent be entitled to look on ourselves as privileged beings, and to imagine that in us nature achieved some kind of aim; but here we discover, in the hymenoptera, an entire category of beings in whom a more or less identical aim is achieved. And this fact, though it decide nothing, perhaps, still holds an honorable place in the mass of tiny facts that help to throw light on our position in this world. It affords, even, if considered from a certain point of view, a fresh proof of the most enigmatic part of our being; for the superposition of destinies that we find in the hive are surveyed by us from an eminence loftier than any we can attain for the contemplation of the destinies of man. There we see before us, in miniature, the large and simple lines that, in our disproportionate sphere, we never have the occasion to disentangle and follow to the end. Spirit and matter are there, the race and the individual, evolution and permanence, life and death, the past and the future, all gathered together in a retreat that our hand can lift and one look of our eye embrace."

A number of instances of intelligent action are given. One of the most notable is that of the building of a comb on a sheet of tin, which, seeming sufficiently impermeable, was not at first coated with wax. When the workers, however, began to store honey, they discovered that the bare tin imparted an undesirable flavor; thereupon they reconsidered the matter and covered with wax its entire surface.

The author is nothing if not enthusiastic over his subject, and undoubtedly knows it thoroughly; but he gets a little out of his depth occasionally, when he ventures into other entomological fields—as in the history of the *Sitaris* parasite of the solitary bee, *Colletes*. The last chapter treats of the progress of the race, which he asserts is continuous, if slow; but "do we not know that, in the evolution of species, a century is but as a drop of rain that is caught in the whirl of the river, and that millenaries glide as swiftly over the life of universal matter as single years over the history of a people?" Altogether the book is well worth reading by all lovers of nature. It is essentially accurate, but nowhere technical. It is well printed, on good paper, with clear type and broad margins.

Eaglehawk and Crow: A Study of the Australian Aborigines, including an Inquiry into their Origin and a Survey of Australian Languages. By John Mathew, M.A. New York: New Amsterdam Book Co. 1900.

Exactly who the Australian aborigines were, or rather how they came to be, physically and otherwise, what they were when first known to the whites, is a moot point; and from present indications it is not probable that we shall ever know much more about the matter than we now do. According to our author, they were Papuans, whatever that may mean, and they are supposed to have come by way of New Guinea, and to have landed somewhere on the northeast coast. From this point they are said not only to have spread over the entire Australian continent, but to have reached Tasmania, which "may, at that time, have been a part of the main land." Subsequent invasions, first by a people of the same stock as the Dravidians, and then by the Malays, have left more or less of an impress upon the original settlers in form, feature, manners, customs, language, etc., comparable somewhat to the effect produced in Great Britain (p. 63) by the admixture of the Saxon and the Norman with the Kelt.

To this theory, considered simply as such, we do not object. There is much that may be urged in its favor, though it can hardly be said to be established, for the reason that not a few of the facts, or characteristics, upon which our author depends to sustain his position, are either called in question or can be accounted for on other grounds than those upon which he relies; and because the social admixture of which the Australian is supposed to have been the product, may have taken place long before the advent in Australia of either one of the elements of which he was composed. In other words, as has been truly said, we do not know whether the present Australian race took its origin on the spot with the character that we admit as belonging to it, or whether, on the contrary, it was altogether constituted in Asia or elsewhere. We do not even know whether it is a composite race, or, admitting that it is, we cannot say definitely of what elements it is composed.

However, be all this as it may, it is not a matter upon which we care to dwell. Neither are we especially interested in the path by which the original settlers first came, or in the route or routes by which they spread over the continent, though we may remark, in passing, that the linguistic evidence seems to justify the conclusion that the Australians and the Tasmanians were originally one people, and that their first settlement was somewhere on the northeast coast, and not on the northwest, as maintained by Eyre and others. What, however, does interest us is the man himself, or rather the position he had reached in the scale of progress, and to understand this it is necessary to familiarize ourselves with his arts and industries, manners and customs, form of government, religion, language, etc., etc. Here our author is seen to advantage. His description of these different phases of development is clear, compact, and, withal, very readable. To some extent, and especially in matters philological, it is based upon personal knowledge, and, of course, when this is the case, he speaks with authority. Even when he finds it necessary to avail himself of the work of others, as is not unfrequently done, his choice of authorities as well as his use of them is judicious. It is only when, venturing beyond the limits of simple description, he undertakes to account for the origin of a custom, or when, basing his conclusion upon the resemblance between certain industries found in Australia and elsewhere, he ascribes to derivation what may have been but an orderly step in the development of the tribe, that it becomes necessary to move with caution.

Take, for example, what is said about the restrictions upon marriage, which seem to have differed in different tribes, though exogamy, or marriage out of the clan, was the rule. Of course it is possible, so far as

we know anything to the contrary, that this form of marriage may have originated (pp. x., 97) in the amalgamation of different stocks of peoples, and was not the result of a conscious effort to prevent the evils that are supposed to follow from close in-breeding; but it is not proved. To assert, as is here done, that the coalescence of two distinct tribes or races explains the fact of exogamy is virtually to beg the question; and if, as Lawson, Henry, and others tell us, certain of our American Indians acted upon the belief that the child of a white father and a native mother was superior to one of pure Indian blood, both as hunter and warrior, there can be no reason why the Australians, who had attained socially to about the same stage of development, may not have reached a similar belief in regard to themselves, and thus been led to the practice of exogamy in order to prevent the evil effects of marrying within the clan.

Of a similar character are the statements that circumcision (pp. 120, 137) was introduced by the Malays, and that the boomerang (p. 53) was brought from India. They may both be true; and yet, judging from what we know of the progress of the Australians along other lines, it is fair to assume, in default of proof to the contrary, that both the custom and the weapon may have originated among them just as they did among other peoples. It is, at best, but a question of probabilities, and, let the answer be what it may, it will not materially affect what is told us of the position of these people in the scale of progress. That is definite, and admits of no misunderstanding.

In conclusion, we desire to call attention to the chapter on languages, and also to the vocabularies—fifty-two in number—which will be found of abiding interest by the philologist. It may also not be out of place to state that the terms Eaglehawk and Crow exist as totem or clan names over such an extensive area as to justify their use as a part of the title of the book.

Orations and Essays of Edward John Phelps. Edited by J. G. McCullough, with a memoir by John W. Stewart. Harper & Brothers. 1901.

The perusal of these orations intensifies our regret that their author is no longer living. Those who enjoyed his friendship will never forget the charm of his conversation, the graceful dignity of his bearing, the polished keenness of his wit. He was a gentleman of the old school; which means not only that he was considerate, but also that he had manners. There is kindliness enough in the world, but the art of displaying it with elegance is not highly cultivated by the present generation. With Mr. Phelps it seemed inborn, and increasing years ripened it into perfection. He was a good lawyer, but there are many of equal knowledge. Hardly any one, however, can be compared with him as an advocate, for he could address a court without written preparation and without maltreating his mother tongue. His was no fatal fluency of speech, that conceals the absence of thought and covers the deficiency of logic. He knew how to reason, and to express his arguments clearly and forcibly, while he flavored them with humor and enlivened them with genial and brilliant wit. In many respects he resembled Mr. Evarts, but he was free from the verbosity which characterized that accomplished orator. He had not the solemn grandeur of Webster; but his addresses are in substance scarcely inferior to those of the earlier statesman.

At the present moment, when the decisions of the United States Supreme Court have left the community in doubt if the Constitution still exists, or what it means if it does exist, there is a melancholy pleasure in recalling the lucid statement of the nature of our Government made by Mr. Phelps in his addresses on "Chief Justice Marshall" and "The Sovereignty of the People." The American Constitution, he said, rests upon the foundation-stone of popular sovereignty. It was reserved for it to extend the judicial protection of personal rights, not only against the rulers of the people, but against the representatives of the people.

"When at last the founders of our Constitution, driven to revolution by a Parliamentary oppression, had learned that even representative government cannot always be depended upon by those it represents, they placed the protection of personal rights beyond the reach of the popular will, and found in a Constitutional judiciary the true and final custodian of the liberty of the subject. . . . And thus, by the inexorable logic of sound Constitutional principles, it has been brought to pass that the rights of the people find their last and best security, not in the popular assembly, nor in any agency of its creation, but in that institution of government which is furthest of all beyond the popular reach; which is made, as far as any institution can be, independent of public feeling and invulnerable to the attack of majorities. Having its origin in the sovereignty of the people, it is the bulwark of the people against their own unadvised action, their own uninstructed will. It saves them, not merely from their enemies; it saves them from themselves. And so it perpetuates the sovereignty from which it sprang, and which has best provided for its own supremacy by the surrender of a power it was dangerous to retain."

This fundamental truth is again expounded in the oration on John Marshall, delivered at the first annual meeting of the American Bar Association in 1879. Referring to the construction of the Constitution, Mr. Phelps said: "It seems to me that it all turned upon one cardinal point—that the construction of the Constitution of the United States, for all purposes for which it requires construction, belongs everywhere and always to the jurisprudence of the country, and not to its politics or even to its statesmanship." We do not need to contrast this view with that which regards the Constitution as conformable to political exigencies, and as meaning what the Executive or Congress may desire. Mr. Phelps's theory may now be declared obsolete; but, in his addresses on "The Relation of Law to Justice" and "The Law of the Land," he demonstrates its connection with the preservation of the rights of the people so eloquently as to encourage the hope that our Government may yet be restored to its proper form.

When we consider that many of these addresses were not written, and were rescued from oblivion only by the stenographic reports made when they were delivered, we are justified in assigning them the highest rank in the department of jurisprudence. They deserve the careful study not only of lawyers, but also of all those who possess enlightened views of patriotism. We regret that a more extended biography of Mr. Phelps was not thought expedient. Mr. Stewart's hearty tribute arouses an interest which deserves to be gratified by acquaintance with the letters, in the art of writing which Mr. Phelps was so great a master.

The Religious Spirit in the Poets. By the Right Rev. W. Boyd Carpenter, D.D., Lord Bishop of Ripon, Hon. D. C. L. Oxon. New York: Thomas Y. Crowell & Co. 1901.

Dr. Carpenter explains, in a prefatory note, that he spends some forty or fifty hours every month upon the train, and devotes these hours to reading and writing; also, that these papers were the product of his railroad hours, and that "from the nature of the case they are only fugitive studies"—a phrase that seems to palter with us in a double sense. This account of the origin of the good Bishop's book is not well calculated to recommend it to the judicious reader, who, if he puts it to the proof, will probably arrive at the conclusion that a different method might have produced a more satisfactory performance. There is no claim that religion is an essential aspect of poetry, and we are far enough from the opinion of Mr. Santayana that religion is poetry which men take for truth. Dr. Carpenter keeps to the safe ground that there are poems which express deep religious feeling, that the poetical and religious aspects of life are so inseparably intertwined that there is a strong natural relation between them, and that, as a matter of fact, there is an historical bond uniting them. He is a great ecclesiastic, but he is quite superior to any exaggeration of the importance of formal religiousness to poetry. Not only does he recognize that there is good poetry that is not religious, and religious poetry that is not good poetry, but many of his examples of the religious spirit in poetry are sought and found in poems that are not deliberately religious. Some of these he deems much more religious than those which are deliberately so, and some that are deliberately so he finds anything but religious in their essential quality.

In his three introductory chapters Dr. Carpenter discusses the kinship between religion and poetry, the religious inspiration of many famous poems, and genuine as distinguished from superficial religious elements. It is in the last of these chapters that he brings out effectively the religiousness of poems that have no direct religious purpose, in contrast with the defective religiousness of some that have this purpose. In this connection Waller and Pope receive just punishment, and even Milton's more formal pieties are rated with severe impartiality. Some of Racine's rhetorical religiousness is set over with good effect against Hamlet's shaking of his mother's heart.

Done with his introductory matter, Dr. Carpenter proceeds in the nine following chapters to give some specific illustrations. These are not taken from the most celebrated religious poems—the 'Divine Comedy,' 'Paradise Lost,' the Epics of Homer, the Greek Tragedies, and Virgil's 'Æneid.' To these there is incidental reference; something more to the 'Divine Comedy' in the chapter on 'In Memoriam,' which, following a hint of Tennyson's, is treated as "a kind of small 'Divina Commedia,'" with some forcing of the note. Strangely enough, there is no reference to the religious poems of the Old Testament—Job, certain of the prophets,

and the Psalms. If this omission is a concession to conventional religiousness, it affords a remarkable contrast to Dr. Carpenter's general freedom from that particular vice. The first extended example of the religious spirit in poetry is that of Spenser's 'Faerie Queen,' a lovely allegory of the excellence of truth, liberty, and self-control. For his next example, Dr. Carpenter goes yet wider from the beaten tracks—to Marlowe's "Faustus," in which the changeless principles of the moral order find vigorous expression. The next is Shakspere's "Tempest," to which even Mr. Barrett Wendell, along with many others, concedes an allegorical character, the signification of the allegory being as various as the minds employed upon it. Dr. Carpenter's is neither better nor worse than a good many. It is indicative of his general disposition that he goes to Milton's 'Comus,' and not to either 'Paradise,' for the religious element which lures him on from one poet to another. What attracts him to Coleridge is "The Ancient Mariner"; but, after reading his interpretation, one is impatient to return to the poem in its unqualified beauty. Tennyson and Browning have each two chapters, but they add as little to our previous enjoyment and appreciation as the Jerusalem apostles to St. Paul.

The Love Letters of Bismarck: Being Letters to his Fiancée and Wife, 1846-1889. Authorized by Prince Herbert von Bismarck, and translated from the German under the supervision of Charlton T. Lewis. Illustrated with portraits. Harper & Bros. 1901.

The sub-title indicates the character of this book much more accurately than the main title, which suggests an effort to catch the tide before it begins to ebb. The recent craze for love-letters, especially if by persons of distinction or if anonymous, we may trust, is near its end. However attractive to sentimentalists and sensation-mongers, to the sedate and discerning a volume of amorous epistles is as insipid as a diet of bananas. But Bismarck was not a male Miss Gushington; Hugo's vein was not his. Not that he lacked feeling, or the will to express it. He can even say pretty things. "I have warmed myself at your dear letters" (1847). "Since leaving Rheinfeld I no longer have heartburn; perhaps it is in my heart, and my heart has remained with Nan" (1850). "I have a bad conscience, seeing so many beautiful things without you" (1862). "Happy the man to whom God has given a virtuous wife who writes to him every day" (1871). "Without horses or wife, I can't bear it here longer" (1888). The dates of these extracts tell the story. His wife was "My Dear Heart" in 1889, as his fiancée was "Angela Mia" and "Only Beloved" in 1847. Few flames have burned so steadily for half a century. The Frenchman might gush *ad nauseam* for thirty months, till married; the tone of the German does not vary in forty years. There is the same impatience when her letters are delayed, the same thankfulness when they arrive. His first is as easy, takes things as much for granted, as his last. Jealousy, as he remarks in March, 1847, seems to him "irreconcilable with true love." Her will, as he said yet earlier, is not to bend to his requests: "I love you as you are, and as you choose to be." The only remarkable things about this *affaire du cœur* are its enduring constancy, and, as a promoter thereof, its comparative rationality.

Otherwise than as a monument to domestic piety, these letters are valuable only as Bismarck's—pin-feathers from an eagle's breast. Apart from compliments and endearments (which are always natural, genuine, and neither mawkish nor voluminous), they are made up of commonplaces, of daily happenings and reflections. As a chronicler of small beer and commenter on juvenile ailments the Prince does not especially shine; nor does he reveal State secrets, when in Germany, as he twice complains, "letters are opened by all sorts of postal spies," and in Russia "it is taken for granted that one means to say to the Government what is written by mail." As to public affairs, additions to previous knowledge cannot be expected from this source. Yet here (July 2, 1859) is a curious forecast of distant events:

"Our politics are drifting more and more into the Austrian wake, and as soon as we have fired a shot on the Rhine, then it's all over with the war between Italy and Austria, and, instead of that, a war between France and Prussia will take the stage, in which Austria, after we have taken the burden from her shoulders, will stand by us or will not stand by us, just as her own interests dictate. She will certainly not suffer us to play a gloriously victorious rôle."

The last clause of this prediction was negatived by the Austrian war. On July 7, 1866 (misprinted "September" on p. 410), he writes enthusiastically of the army he is accompanying:

"Our people are ready to embrace one another, every man so deadly in earnest, calm, obedient, orderly, with empty stomach, soaked clothes, wet camp, little sleep, shoe-soles dropping off, kindly to all, no sacking or burning, paying what they can and eating mouldy bread. There must surely be a solid basis of fear of God in the common soldier of our army, or all this could not be."

One is moved to regret that this "solid basis" could not have lasted a generation and supported the German troops in China, so as to mitigate the "sacking and burning"—and worse—there. Bismarck's piety sometimes grates a little, as after the passage above quoted from 1859:

"After thirty years, perhaps much sooner, it will be a small matter to us how things stand with Prussia and Austria, if only the mercy of God and the deserving of Christ remain to our souls. I opened the Scriptures last evening, at random, so as to rid my anxious heart of politics, and my eye lighted immediately on the fifth verse of the 110th Psalm. As God wills, it is all, to be sure, only a question of time, nations and people, folly and wisdom, war and peace; they come and go like waves of water, and the sea remains. What are our states and their power and honor before God, except as ant-hills, and beehives?"

And so forth. This hardly rings true from one who was doing his best to rule states, and was before long to be the chief power in Europe. Three lines farther on he says: "There is nothing in this world but hypocrisy and jugglery." For the moment, no doubt, his grapes were sour. Far less conspicuous men have done much better at moralizing, and "without trying": you cannot imagine T. E. Brown, for instance, spinning out a commonplace in this fashion. But the worst of it is, it is not in character, for Bismarck was in essence manly. One would rather see him stick to his part, and express his faith in the good old Elizabethan terms appropriate to leading monarchs and prime ministers, as thus: "The Lord has never yet forsaken me in an unexpected and unsought position, and my trust stands firm that He will not let evil come upon me in this place, or upon my health either" (Berlin, October 1, 1862). So ten years before: "The grace of God will not let go of my soul which He has once touched, and will not cut the thread by which He has held and guided me . . . I have the certainty that I cannot do without you, not for a long while yet, and *consequently the assurance* that God will preserve you to me." That is, "I shall have what I want, since the Deity and I are good friends, and He will not 'go back' on me. I make the plans. He insures their success." At this rate, if anything should unrighteously and irreverently go wrong in affairs of state, it can be laid on Providence as the "wicked partner."

The purpose of the book, so far as it can be said to have one, is, of course, to exhibit the "man of blood and iron" on his human, private, domestic side. As such he makes in the main an edifying picture. The letter to his intended father-in-law, which opens the volume, strikes a note of frankness, genuineness, thoroughness, which (with the possible exception noted above) is maintained throughout. In this initial epistle he explains (what both seemed to regard as most important) his transition from "the blind alley of doubt" to Lutheran orthodoxy; his only remaining "doubt" is that raised by a pure passion, "whether my self-confidence was not greater than my ability"; and this question, so foreign to his nature, never reappears. His serious account of his duel in 1852 is in marked contrast to the many reckless encounters of his college days. Attuned as these letters are to home-keeping quietness, they yet emit sparks of the writer's active and warlike temper, as when he says, "I'd rather walk than ride lazy horses"; and when there was rioting, in Cöslin, "I should have liked to stay there"; and when a troublesome adviser of his customer endangered the lease of an estate, "I hit upon the lucky expedient of being so coarse to the assistant, without quite giving him cause of action, that he left the room forthwith and drove away; thereupon I came to terms with the lessee in five minutes." Other good things there are, as this: "I can't find any place in the Bible where it is forbidden to take the name of the devil in vain." But these are not numerous.

Les Femmes Docteurs en Médecine dans tous les Pays. Par Haryett Fontanges. Paris: Alliance Coöperative du Livre. 1901.

A poor book on women in medicine is better than none at all, and one may be moderately grateful to Haryett Fontanges for this one. The information given about women in medicine in America is scrappy and out of perspective, as well as inaccurate, to a remarkable degree. But the impossibility in France of getting thorough and full information about things American is too well known a phenomenon to cause comment, though it is supposed to have been a German who asked a California girl, who mentioned that she had attended school in Boston, if she went home o' nights. In regard to the history and present status of women in medicine in France, on the other hand, this book contains reasonably full

and extremely interesting information. Madame Madeleine Brès was the first French woman to practise medicine in Paris, and it was also she who asked for and obtained, in 1870, the opening of the Paris School of Medicine to women. Two other women, however, preceded her in obtaining the diploma of doctor—Miss Garrett Anderson (who had already studied in Switzerland) in 1870, and Miss Putnam (now Dr. Mary Putnam Jacobi) in 1871. Twenty-seven pages of the book are given to the titles of the theses presented by women upon obtaining the doctor's degree, yet the list is incomplete, owing to the curious circumstance that it is the custom with all the different administrations in Paris to make no distinction of sex in official lists of names. In a country where Camille and Marie may be the names of men as well as of women, it will be understood that a correct separation is not easy to make when there is no Mlle. or Mme. preceding. Among the theses, very creditable in number, of this list to which have been awarded medals, are those of Miss Putnam, Mme. Dejerine-Klumpke (who is very well known by a long series of later contributions to science, and who is one of the four remarkable sisters from California who have all won distinction in Paris in as many different lines of activity), and Miss Josephine Joteyko, whose contributions to the study of fatigue are familiar to the psychologists. The number of women medical sudents in the University of Paris in 1899 is given as 129, of whom 91 were Russian, 5 Rumanian, a few German, English, and Swiss, and 29 French.

Two Novels Apt to Interest Nation Readers.

George Gissing's

Our Friend the Charlatan

386 pp., 12mo, $1.50

"Excellent. . . . It holds the reader by its engrossing and sustained interest. . . . There are at least half a-dozen remarkable portraits of modern men and women, and a great deal of convincing illustration of the manner in which character is molded by circumstances. . . . A really masterly study of that egotism which just lacks the quality of ruthlessness to render it triumphant."—*London Spectator.*

"There is measure, force, ease, in the way in which the characters unfold their natures. . . . The interplay is intricate and leaves a sense of substance."—*Outlook.*

"Emphatically a novel to read, worth a dozen of the futile stories that are 'boomed' into the hundred thousands."—*Providence Journal.*

Marnan's Daughter of the Veldt

350 pp., 12mo, $1.50

"It has the fascination of power. . . . It is not food for babes, and should not fall into the hands of those who do not understand life in all its phases."—*Outlook.*

"People who know what the words 'a good novel' mean and who like a good novel had better try 'A Daughter of the Veldt.'"—*Brooklyn Eagle.*

"A marvellously strong story—in parts absolutely thrilling. Some of the work is as intense, as spirited, as effective in depicting wonderful contrast in character as any work done by Bret Harte."—*Buffalo Commercial.*

"As to the wonderful strength of the story there can be no two opinions."—*Philadelphia Telegraph.*

Henry Holt & Co.,

Swallowfield and its Owners

By Lady RUSSELL of Swallowfield Park.

With 52 Portraits and Illustrations, including 15 in Photogravure, and 7 Pedigrees. 4to, pp. xii.-362, gilt edges, $14.00.* [*Just ready*

This ancient park or chase in Berkshire was in the hands of the Crown from an early date, and its history is connected with the names of several kings and queens and princesses of England from Katherine, the dumb child of Henry III., to the six wives of Henry VIII. Its tenants of less than kingly rank include the families of St. John, Beauchamp, Arundel, and Despencer, amongst a long line of notables, from FitzOsbern, of Domesday Book, to Governor Pitt of Diamond fame.

LONGMANS, GREEN, & CO.

91 and 93 Fifth Avenue, New York.
